

MOBOTIX CLOUD

The new cyber secure cloud video management system with real MOBOTIX DNA

April 28, 2020

Langmeil, Germany - With the MOBOTIX CLOUD, MOBOTIX launches a new cyber-secure cloud video management system that will be available from April 30 via a flexible software subscription. The MOBOTIX VSaaS offering (Video Surveillance as a Service) enables complete video management of local cameras via App. The data is stored in stable cybersecure cloud data centers in regional proximity to the cloud users. "The market launch of the MOBOTIX CLOUD is another important step for us as a complete solution provider for security-relevant video management systems for our customers. Together with our technology partners, we plan, develop, install and support high-end video solutions. In this way, we optimize our customers' business and make it more secure without requiring them to invest additional technical, time or personnel resources", explains MOBOTIX CEO Thomas Lausten.

Customers benefit from attractive subscription model

The MOBOTIX CLOUD solution includes - in addition to the MOBOTIX Bridge hardware component - all services available in a conventional VMS: event-controlled video recording, archiving, live remote access to each camera, notifications, user administration, Internet security and much more. MOBOTIX CLOUD is available with a monthly subscription model, thus saving on own storage devices, additional video servers and IT personnel for the video system.

"Each camera communicates with a securely encrypted outgoing connection with the MOBOTIX Bridge, a compact high-security connection box. A single bridge can be connected to up to 15 ONVIF-S network cameras. With several bridges per site, the number of connected cameras can be expanded as needed," explains Hartmut Sprave, CTO of MOBOTIX AG. The bridge streams the video data to the MOBOTIX CLOUD, enables intelligent bandwidth management and, thanks to the integrated hard disk, also local buffering of the video in case of bandwidth fluctuations. In addition, network failures of up to 48 hours can be bridged. All video recordings are secure and stored per camera for a freely definable archiving period and resolution in private MOBOTIX data centers.

Cyber Security and Scalable Infrastructure

The top priority for MOBOTIX was to provide cybersecure connections to regionally available MOBOTIX CLOUD data centers for its own cloud solution. Secure end-to-end encryption protects all data stored and transferred in the system. And the integrated hard disk in the MOBOTIX Bridge serves as a storage buffer in case of interrupted or poor connections to the cloud.

The MOBOTIX CLOUD video management system combines comprehensive security with a scalable infrastructure. It is suitable for video systems of all sizes. The cloud solution is ideal and easy to manage, especially for projects with a large number of different locations (e.g. retail stores, franchises , restaurants) and users (e.g. security personnel in public buildings or different departments in larger companies with several branch offices). Even for private users, the cloud provides easy access to the use of a video security system.

Decisive advantages that speak for the MOBOTIX CLOUD solution

Simple use of a professional video system

The MOBOTIX CLOUD combines the use of high-quality MOBOTIX cameras with extremely simple and convenient operation. The user interface of the CLOUD is limited to the essentials for efficient everyday use, making it easy even for users without IT or MOBOTIX knowledge to enter and move into the cloud world.

Maximum Cyber Security

The MOBOTIX CLOUD solution meets the basic requirements of our own products with regard to the highest possible cyber security standards. In this way, the MOBOTIX CLOUD reduces potential weaknesses: There are no open ports, no local firewalls and no local software. Furthermore, no firewall installation is required and no incoming Internet connections are allowed. The cameras are not directly connected to the Internet; instead, the MOBOTIX Bridge is connected in between. The MOBOTIX CLOUD Datacenter is malware protected without any open network connections and all recorded videos are encrypted.

Data storage in the cloud brings special security advantages

When a video is stored in the cloud, it is safe from equipment failure, damage, and theft. But it's also safe from other unforeseen events such as fire or water damage. The MOBOTIX CLOUD data centers, which are currently located at twelve sites around the world and offer multi layered redundancy. The MOBOTIX Bridge acts as failsafe recorder allowing the cameras to continue recording for up to 48 hours even during a network outage.

Compatible with all current MOBOTIX cameras

The MOBOTIX CLOUD requires only one H.264 stream from a video source and is therefore compatible with all current MOBOTIX camera models of the Mx6 series, the MOBOTIX 7 series and the MOBOTIX MOVE models. Both digital and mechanical PTZ functions can be controlled via the MOBOTIX CLOUD as well as our hemispheric cameras. Existing third-party cameras with ONVIF-S profile can also be used in the MOBOTIX CLOUD.

Cost Advantages of the MOBOTIX CLOUD

End customers save money with the MOBOTIX CLOUD. There is no need to buy and maintain software, storage devices or additional servers. You pay a small initial amount and then decide on the basis of a flexible subscription plan where you only have to pay for what you need. Regular updates of the MOBOTIX CLOUD software ensure that the system is always up to date.

About MOBOTIX AG

MOBOTIX is a leading manufacturer of intelligent IP video systems in premium quality and sets standards in innovative camera technologies and decentralized security solutions with the highest level of cyber security. MOBOTIX was founded in 1999 and is headquartered in Langmeil, Germany. The company relies on its own research and development as well as its own production "Made in Germany". Customers around the world trust in the durability and reliability of MOBOTIX hardware and software. The flexibility of the solutions, the integrated intelligence and the highest level of data security are appreciated in many industries. MOBOTIX products and solutions support customers in areas such as industrial manufacturing, retail, logistics and healthcare. With strong and international technology partnerships, the company is using artificial intelligence and deep learning modules to expand its universal platform and new applications in a wide range of sectors.
