

## **MOBOTIX Thermal Technology Successfully Integrated in Konica Minolta & Panasonic Partner Solution**

### **Pandemic Containment**

**November 18, 2020**

Langmeil, November 2020 - Together with Konica Minolta and Panasonic i-PRO, MOBOTIX developed a video surveillance system. The intelligent solution package uses Konica Minolta Temperature Screening Apps integrated into MOBOTIX thermal cameras linked to a network disk recorder developed by Panasonic i-PRO. The solution uses thermal radiometry (TR) technology, where thermal radiation can be measured in the entire image area and assigned to a temperature value per pixel. The application can measure the body surface temperature of people without contact and detect abnormal amounts. The solution is supported by a black body radiator, which allows an exact reference value setting to increase the measurement accuracy.

Processes such as flows of people at entrances/exits, check-ins, receptions, etc. are not affected due to the excellent performance. Thus, both the security personnel and the persons to be measured can be relieved, and resources can be saved. The solution is interesting for many industries. For schools, other public institutions, hospitals, and nursing homes or retail stores, the system represents an important security measure to protect employees, customers, patients, residents, nursing staff, students, and visitors.

An open partnership between Konica Minolta, MOBOTIX and Panasonic i-PRO developed the solution package. Longstanding personal and professional contacts between MOBOTIX and Panasonic in the USA helped accelerate the full cooperation, as essential trust was already in place. MOBOTIX state-of-the-art video surveillance technology is already playing a key role in the project to contain infectious diseases. In addition to people with conspicuous body surface temperature, this solution and a Konica Minolta camera app will also be used to detect people without a mask from December 2020.

The system does not replace medical equipment nor does it detect infectious diseases, but effectively supports their containment by initiating medical follow-up examinations and intervention in case of specific abnormalities.

## About MOBOTIX AG

MOBOTIX is a leading manufacturer of intelligent IP video systems in premium quality and sets standards in innovative camera technologies and decentralized security solutions with the highest level of cyber security. MOBOTIX was founded in 1999 and is headquartered in Langmeil, Germany. The company relies on its own research and development as well as its own production "Made in Germany". Customers around the world trust in the durability and reliability of MOBOTIX hardware and software. The flexibility of the solutions, the integrated intelligence and the highest level of data security are appreciated in many industries. MOBOTIX products and solutions support customers in areas such as industrial manufacturing, retail, logistics and healthcare. With strong and international technology partnerships, the company is using artificial intelligence and deep learning modules to expand its universal platform and new applications in a wide range of sectors.
