Boost your productivity and efficiency through modular safety automation

Automated Temperature Detection

MOBOTIX
BeyondHumanVision

Zero-Touch
Safe detection process with no operator dependency limiting human-to-human interaction and providing direct feedback.

Rapid
On average, the detection process takes two seconds per employee. This will help in preventing long queues from forming on the entrances of your facility.
Remote-Installable
We will connect to your local pc and camera worldwide through the internet and install our solution within 30 minutes.
Hardware independent
We can use any thermal camera with API access and install the addtional software on existing hardware

"During the COVID-19 crisis, the Bleenco team build an accurate automatic temperature screening system in record time using affordable equipment. Bleenco was extremely resourceful at solving every hurdle along the way and today if you visit our factory, your temperature will be screened automatically, with the same range of accuracy of a medical thermometer, granting you access to the plant only if you comply with our SHE regulation" - **Alain Ibanez, Supply Chain Digital Transformation Manager at Unilever**

How to get started
Getting started is simple,all you need is:
- **Thermal Camera.** Existing or new M16 Thermal Series
  a) **Online Cloud installation**: any Computer with internet access
  b) **On-site Hardware installation:** Server or Computer with Linux, i7, 16GB RAM and 256GB or similar

Pricing
Price depends on desired camera quantity. Starting from 125 EUR/ month. Contact us for details.
