Protection around the Clock: Discreet, Data-Protection-Compliant and Affordable

Intruders and burglars act discreetly and inconspicuously. They operate in the shadows. MOBOTIX thermal technology **reliably and affordably** detects uninvited guests, **even in absolute darkness**.

With a MOBOTIX video system, you can monitor up to 20 areas with individual thresholds in the camera's field of view. This makes the system **flexible, accurate**, and ensures that **false alarms are avoided**.

Optimal Monitoring, Day and Night

- People and the environment radiate different temperatures. MOBOTIX thermal technology makes these differences in temperature visible.
- Reliably detect and distinguish between people and objects (vehicles, humans, animals) **in any light situation, even in absolute darkness**.
- MOBOTIX thermal cameras with **detection angles of up to 105°** or a **viewing range of more than 200 m** (telephoto lens) offer the best perimeter and property protection — day and night.

Energy-Efficient and Affordable

- MOBOTIX thermal technology **does not require any lighting**, which means you save energy and money.
- Even the **low-cost MOBOTIX ECO Thermal series** provides reliable security for perimeter and property protection.
- The low-maintenance MOBOTIX video systems are impressively durable with an MTBF (Mean Time Between Failure) of more than nine years and a 5-year warranty **on all hardware**.

GDPR-Compliant Protection

- People are detected by thermal imaging but cannot be identified. This protects privacy and conforms to **the GDPR**.
- Option: An **additional optical sensor**, which only acts in the event of an alarm, can be used to identify the intruders.
- With ActivitySensor and supporting apps, **false alarms are significantly reduced**.
