Support

MOBOTIX Support

If you need technical support, please contact your MOBOTIX dealer. If your dealer cannot help you, he will contact the support channel to get an answer for you as quickly as possible.

If you have internet access, you can open the MOBOTIX help desk to find additional information and software updates.

Please visit www.mobotix.com > **Support** > **Help Desk**.

MOBOTIX eCampus

The MOBOTIX eCampus is a complete e-learning platform. It lets you decide when and where you want to view and process your training seminar content. Simply open the site in your browser and select the desired training seminar.

Please visit www.mobotix.com/ecampus-mobotix.

MOBOTIX Community

The MOBOTIX community is another valuable source of information. MOBOTIX staff and other users are sharing their information, and so can you.

Please visit community.mobotix.com.

Safety Notes

- This product must not be used in locations exposed to the dangers of explosion.
- Do not use this product in a dusty environment.
- Protect this product from moisture or water entering the housing.
- Install this product as outlined in this document. A faulty installation can damage the product!
- This equipment is not suitable for use in locations where children are likely to be present.
- When using a Class I adapter, the power cord shall be connected to a socket-outlet with proper ground connection.
- To comply with the requirements of EN 50130-4 regarding the power supply of alarm systems for 24/7 operation, it is highly recommended to use an uninterruptible power supply (UPS) for backing up the power supply of this product.

Legal Notes

Legal Aspects of Video and Sound Recording

You must comply with all data protection regulations for video and sound monitoring when using MOBOTIX AG products. Depending on national laws and the installation location of the cameras, the recording of video and sound data may be subject to special documentation or it may be prohibited. All users of MOBOTIX products are therefore required to familiarize themselves with all applicable regulations and to comply with these laws. MOBOTIX AG is not liable for any illegal use of its products.

Declaration of Conformity

The products of MOBOTIX AG are certified according to the applicable regulations of the EC and other countries. You can find the declarations of conformity for the products of MOBOTIX AG on www.mobotix.com under **Support > Download Center > Marketing & Documentation > Certificates & Declarations of Conformity**.

RoHS Declaration

The products of MOBOTIX AG are in full compliance with European Unions Restrictions of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment (RoHS Directive 2011/65/EC) as far as they are subject to these regulations (for the RoHS Declaration of MOBOTIX, please see www.mobotix.com, **Support > Download Center > Marketing & Documentation > Brochures & Guides > Certificates**).

Disposal

Electrical and electronic products contain many valuable materials. For this reason, we recommend that you dispose of MOBOTIX products at the end of their service life in accordance with all legal requirements and regulations (or deposit these products at a municipal collection center). MOBOTIX products must not be disposed of in household waste! If the product contains a battery, please dispose of the battery separately (the corresponding product manuals contain specific directions if the product contains a battery).

Disclaimer

MOBOTIX AG does not assume any responsibility for damages, which are the result of improper use or failure to comply to the manuals or the applicable rules and regulations. Our General Terms and Conditions apply. You can download the current version of the **General Terms and Conditions** from our website at www.mobotix.com by clicking on the corresponding link at the bottom of every page.

About Vaxtor Genesis OCR App

Flexible generic optical character recognition

The high-performance generic certified Vaxtor Genesis OCR App was developed to read any combination of uppercase latin characters and/or numbers arranged in up to three lines.

Operating under any lighting conditions, it is unaffected by image quality, print degradation and font shape variations it can process still images and recorded or live video streams.

- generic optical character recognition to read any combination of uppercase latin characters and/or numbers
- reads characters arranged in up to three lines
- user-defined specification of the required code format
- recognition log
- MOBOTIX events via MxMessageSystem
- numerous integration options for further processing of the generated meta data (generic as well as native reporting interfaces)
- Two lists for individual actions (e.g. access granted/denied, alarm, etc.)
- Free flow and signaled mode

CAUTION! Thermal sensors are not supported by this app.

Smart Data Interface to MxManagementCenter

This app has a Smart Data interface to MxManagementCenter.

With the MOBOTIX Smart Data System, transaction data can be linked to the video recordings made at the time of the transactions. Smart Data source can be e.g. MOBOTIX Certified Apps (no license required) or general Smart Data sources (license required) like POS systems or license plate recognition systems.

The Smart Data System in MxManagementCenter enables you to quickly find and review any suspicious activities. The Smart Data Bar and the Smart Data View are available for searching and analyzing transactions. The Smart Data Bar provides a direct overview of the most recent transactions (from the last 24 hours) and for this reason it is convenient to use it for reviews and searches.

NOTE! For information on how to use the Smart Data System, see the corresponding online help of the camera software and MxManagementCenter.

Fig. 1: : Smart Data Bar in MxManagementCenter (Example: POS System)

Technical Specifications

Product Information

Product Name	Vaxtor Genesis OCR App
Order Code	Mx-APP-VX-GEN
Supported MOBOTIX Cameras	M73, S74, D71
Minimum Camera Firmware	v7.3.1.x
MxManagementCenter Compatibility	<ul style="list-style-type: none">■ min. MxMC v2.7■ Configuration: Advanced Config license required■ Event Search: Smart Data Interface license included
MOBOTIX HUB Compatibility	<ul style="list-style-type: none">■ min. HUB version: 2021 R1■ min. HUB license level (Analytics Events): L2■ min. HUB license level (MOBOTIX Event Search Plug-In): L4<ul style="list-style-type: none">■ MOBOTIX Event Search Plug-In for MMOBOTIX HUB
MOBOTIX Helix Compatibility	min. MOBOTIX Helix v1.0

Product Features

App Features	<ul style="list-style-type: none"> ■ generic optical character recognition to read any combination of upper-case latin characters and/or numbers ■ reads characters arranged in up to three lines ■ user-defined specification of the required code format ■ recognition log ■ MOBOTIX events via MxMessageSystem ■ numerous integration options for further processing of the generated meta data (generic as well as native reporting interfaces) ■ Two lists for individual actions (e.g. access granted/denied, alarm, etc.) ■ Free flow and Signaled mode
Maximum number of recognition areas	3
Maximum number of enrolled license plates	1000 per list
Meta Data / Statistic formats	JSON
Trial License	30-day trial license pre-installed
MxMessageSystem supported	Yes
Integration Interfaces	<ul style="list-style-type: none"> ■ MOBOTIX SYNC ■ Milestone X-Protect (Analytics Events, Transaction Plug-In) ■ Genetec Security Center (Custom Events, Bookmarks) ■ NetworkOptix NxWitness ■ Generic 3rd party integration through FTP(S), CSV, XML, JSON via HTTP (S) ■ Compare supported camera's interfaces
MOBOTIX Events	Yes
ONVIF Events	Yes (Generic Message event)

Supported Code Formats

Supported Code Formats	<ul style="list-style-type: none">■ all kind of alphanumeric codes■ min. / max. number of characters: 2/24
------------------------	---

Scene Requirements

Character Height	20px - 50px
Maximum Vertical Angle	30°
Maximum Horizontal Angle	< 25°
Maximum Tilt Angle	< 25°

Technical App Specifications

Synchronous / Asynchronous App	asynchronous
Simultaneous execution of other apps	Yes (depending on performance expectations)
Accuracy	min. 99% (considering scene requirements)
Processed frame rate	typ. 5 fps
Detection time	typ. 500 ms per code

Licensing Certified Apps

The following licenses are available for the Vaxtor Genesis OCR App:

- **30-day test license** pre-installed
- **permanent commercial license**

The usage period begins with activation of the app interface (see)

NOTE! For buying or renewing a license, contact your MOBOTIX Partner.

NOTE! Apps are usually pre-installed with the firmware. In rare cases, apps must be downloaded from the website and installed. In this case see www.mobotix.com > **Support** > **Download Center** > **Marketing & Documentation**, download and install the app.

License Activation of Certified Apps in MxManagementCenter

After a test period commercial licenses must be activated for use with a valid license key.

Online-Activation

After receiving the activation IDs, activate them in MxMC as follows:

1. Select from the menu **Window > Camera App Licenses**.
2. Select the camera on which you want to license apps and click **Select**.

Name	Url	Serial Number
mx10-10-38-40	10.10.38.40	10.10.38.40
mx10-22-10-30	10.22.10.30	10.22.10.30
M73 10-32-0-62	10.32.0.62	10.32.0.62

Fig. 2: Overview of Camera App Licenses in MxManagementCenter

NOTE! If necessary, correct the time set on the camera.

1. An overview of the licenses installed on the camera may be displayed. Click **Activate License**.

Name	Expiration	Quantity
MxWheelDetector	Permanent	Unlimited
iot_plugin_a	Permanent	Unlimited
iot_plugin_b	Permanent	Unlimited
iot_plugin_c	Permanent	Unlimited
iot_plugin_d	Permanent	Unlimited
iot_plugin_e	Permanent	Unlimited
iot_plugin_f	Permanent	Unlimited
iot_plugin_g	Permanent	Unlimited
iot_plugin_h	Permanent	Unlimited
iot_plugin_i	Permanent	Unlimited
iot_plugin_j	Permanent	Unlimited

Fig. 3: Overview of the licenses installed on the camera

NOTE! If necessary, correct the time set on the camera.

2. Enter a valid Activation ID and specify the number of licenses to install on this computer.
3. If you want to license another product, click on . In the new row, enter the appropriate Activation ID and the number of licenses you want.

4. To remove a line click .
5. When you have entered all Activation IDs, click **Activate License Online**. During activation, **MxMC** connects to the license server. This requires an Internet connection.

Fig. 4: Adding licenses

Successful activation

After successful activation, a new log in is required to apply the changes. Alternatively, you can return to license management.

Failed activation (missing internet connection)

If the license server cannot be reached, e.g. due to a missing internet connection, apps can also be activated offline. (see [Offline Activation](#), p. 16).

Offline Activation

For offline activation, the partner/installer from whom you purchased the licenses can generate a capability response (.bin file) on the license server to activate their licenses.

1. Select from the menu **Window > Camera App Licenses**.
2. Select the camera on which you want to license apps and click **Select**.

Fig. 5: Overview of Camera App Licenses in MxManagementCenter

NOTE! If necessary, correct the time set on the camera.

3. An overview of the licenses installed on the camera may be displayed. Click **Activate License**.

Fig. 6: Overview of the licenses installed on the camera

NOTE! If necessary, correct the time set on the camera.

Licensing Certified Apps

License Activation of Certified Apps in MxManagementCenter

4. Enter a valid Activation ID and specify the number of licenses to install on this computer.
5. If you want to license another product, click on . In the new row, enter the appropriate **Activation ID** and the number of licenses you want.
6. If necessary, click  to remove a line.
7. When you have entered all Activation IDs, click **Download Capability Request File (.lic)** and send it to your partner/installer.

NOTE! This file allows the partner / installer from whom you purchased the licenses to generate a capability response file (.bin) on the license server.

Fig. 7: Adding licenses

8. Click Load Capability Response File and follow the instructions.

Successful activation

After successful activation, a new log in is required to apply the changes. Alternatively, you can return to license management.

Managing Licenses in MxManagementCenter

In MxManagementCenter you can comfortably manage all licenses that have been activated for a camera.

1. Select from the menu **Window > Camera App Licenses**.
2. Select the camera on which you want to license apps and click **Select**.

Fig. 8: Overview of Camera App Licenses in MxManagementCenter

An overview of the licenses installed on the camera may be displayed.

Fig. 9: Overview of the licenses installed on the camera

NOTE! If necessary, correct the time set on the camera.

Column	Explanation
Name	Name of the licensed app
Expiration	the time limit of the license
Quantity	Number of licenses purchased for a product.
Serial Number	Unique identification determined by MxMC for the device used. If problems occur during licensing, please have the device ID ready.

Synchronize licenses with server

When the program starts, there is no automatic comparison of the licenses between the computer and the license server. Therefore, click **Update** to reload the licenses from the server.

Update licenses

To update temporary licenses, click **Activate Licenses**. The dialog for updating/activating licenses opens.

NOTE! You need administrator rights to synchronize and update licenses.

Camera, image and scene requirements

The camera should be setup so that the combination of the distance, the lens's focal length and the camera's resolution provide an image that can be accurately analyzed by the OCR. Therefore the following pre-requisites must be fulfilled for the scene:

Quality of the container code to be captured in the image

- The container code must be high-contrast and clearly legible, i.e. as clean as possible, without dents or holes and well illuminated.
- The code must comply with the standard ISO 6346
- Minimum character height
 - The objective of a container code recognition system is to capture an image with a good container code. In order to achieve this all characters of container code should have a height between 20 and 50 pixels.

Fig. 10: Minimum character height

- Maximum rotation angle:
 - Vertical: $< 30^\circ$
 - Slope: $< 25^\circ$
 - Horizontal: $< 25^\circ$

Frame rate

The selection of the correct frame rate influences the recognition quality significantly. The recommendation is 10 fps.

Shutter Speed (Exposure time)

Shutter speed, also known as the “exposure time”, is the length of time a camera shutter is open for in order to expose light onto the camera sensor. The shutter speed is measured in seconds, or fractions of a second. The bigger the denominator, the faster the speed. For example, 1/250th means one two-hundred-and-fiftieth of a second or four milliseconds.

(1 second = 1000 milliseconds)

Examples for recommended exposure times

Scene	minimum exposure time (sec)
Barrier or Gate	1/250 th (4 milliseconds)

NOTE! The exposure time must be adjusted according to the light conditions.

Resolution

The resolution of the camera determines the amount of detail that can be captured. The smaller the object detail, the higher the resolution that is required. There are several factors that determine the detail captured:

- The resolution (pixel size) of the camera sensor. This sensor (normally CMOS) where the light eventually falls and a typical IP camera has a sensor resolution of 2 or 4 Megapixels.
- The resolution of the camera's electronics. Most CCTV cameras can support a minimum of 1920 x 1080 – but may be set to a lower resolution if not needed.
- The quality and focal length of the lens. The quality of the optics can play a part in challenging circumstances. The focal length (zoom factor) determines the field of view that can be seen.
- The quality of the images can be influenced by factors such as the type of lighting used.

Examples for recommend resolutions

Scene	minimum resolution
Barrier or Gate	800 x 600 px
Roadside Deployment	1280 x 720 px

Focal length

The focal length of the lens determines how “zoomed in” the image is. It is usually expressed in millimeters (e.g., 6 mm, 25 mm, or 50 mm).

The focal length defines the angle of view (how much of the scene will be captured) and the magnification (how large individual elements will be). The longer the focal length, the narrower the angle of view and the higher the magnification. The shorter the focal length, the wider the angle of view and the lower the magnification.

In the case of zoom lenses, both the minimum and maximum focal lengths are stated, for example 10–40 mm.

Examples for recommended focal length

Scene	Distance between camera and code (m)	recommended lens
e.g. Barrier or Gate	2 - 6 m	2 - 8 mm or similar
e.g. Access road	15 - 30 m	15 - 50 mm or similar

NOTE! The lens should be **IR corrected** to avoid out of focus images. IR Corrected lenses should be used on both day/night and monochrome cameras in all lighting conditions in order to achieve a crisp sharp image.

Illumination

Container codes are normally painted onto the containers and are not reflective. Therefore sufficient ambient lighting must be used to adequately illuminate the text so that it can be read at a reasonably fast shutter speed without the camera adding too much gain to brighten the image. (a maximum gain of about 12 is advised).

NOTE! Adding gain effectively amplifies the video signal, including any noise which can result in a very grainy image which is prone to OCR errors.

Recommendations on mounting and adjusting.

- If you want to recognize character codes on cars on multiple lanes it is generally recommended to mount the camera on a crossbar.
- Shutter speed must be high enough to cut the light from car's headlights at night (usually it's about 1/1000). Keep in mind, that too high shutter speed may obscure the edges of the lines (especially shadows).
- Depth of focus is a very important parameter. If you are using a camera with a CS-mount lens, use a fixed lens. Fixed lens are better for container code recognition due to greater depth of focus. Megapixel lens is also strongly recommended.
- Respect changing light conditions (e. g. due to sunrises and sunset) when choosing the place of mounting. Direct sunlight beams can distort a picture. If the code is facing a direct sunlight consider using a lens with auto iris mode.
- If mounting a camera on a roadside pole check how the pole reacts to heavy cars or a convoy of cars. Some poles have tangible tremor, this could make container code recognition almost impossible.
- It is recommended to turn down WDR and BLC. In most cases, they will make the picture more pretty, but at the cost of smudging details like an edges of letters in the container code. For the same reason keep digital noise reduction as low as possible.

Camera, image and scene requirements

Recommendations on mounting and adjusting.

- On certain rare conditions there may be a cases of false detections e. g. because of recognizing image parts that structurally or semantically look similar to a code (e. g. fences or ads). To minimize this:
- Adjust the region of interest accordingly. It may be a good idea to make it smaller, or change it's shape, omitting the parts, which potentially may be false detected.
- There may be cases, when the best performance will occur by changing angle of lens or moving the camera. In some cases, shooting a front container code is better.

Activation of the Certified App Interface

CAUTION! The Vaxtor Genesis OCR App does not consider obscure areas defined for the live image. Therefore there is no pixelation in obscure areas while configuring the app and during image analysis by the app.

NOTE! The user must have access to the setup menu ([http\(s\)://<Camera IP address>/control](http(s)://<Camera IP address>/control)). Therefore check the user rights of the camera.

1. In the camera web interface, open: **Setup Menu / Certified App Settings** ([http\(s\)://<Camera IP address>/control/app_config](http(s)://<Camera IP address>/control/app_config)).

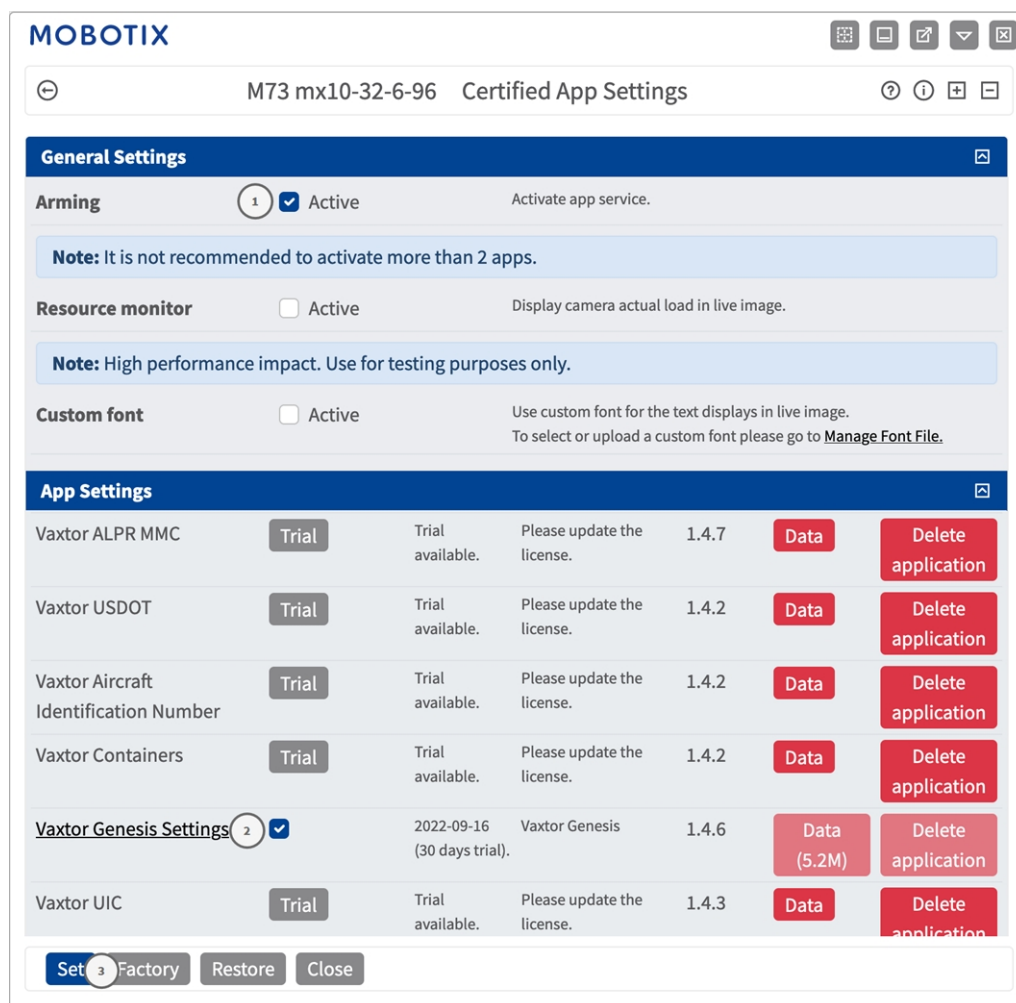

Fig. 11: Activation of Certified Apps

2. Under **General Settings** activate the **Arming** ① of the app service.
3. Under **App Settings** check the **Active** option ② and click **Set** ③.
4. Click on the name of the App to be configured to open the Apps user interface.
5. For configuration of the App see [Configuration of Vaxtor Genesis OCR App, S. 1](#).

Configuration of Vaxtor Genesis OCR App

NOTE! For best performance and results in container code processing make sure to have scene set up to meet the [Camera, image and scene requirements](#).

CAUTION! The user must have access to the setup menu ([http\(s\)://<Camera IP address>/control](http(s)://<Camera IP address>/control)). Therefore check the user rights of the camera.

1. In the camera web interface, open: **Setup Menu / Certified App Settings** ([http\(s\)://<Camera IP address>/control/app_config](http(s)://<Camera IP address>/control/app_config)).
2. Click on the name of the **Vaxtor Genesis OCR App**.

The configuration window of the app appears with the following options:

Basic Settings

The following configurations should be taken into account:

Vaxtor Genesis

Grammar Strict ☒ Read only codes that match a grammar

Genesis grammar

Filter

%D%D%D%D%L%L%L × NKK, ×

%D%D%D ×

Define grammar rules for reading multi-line text strings. E.g. %D%D%D%D%L%L%L to read any combination of four digits and three letters like 1234ABC. Valid separators are commas, new line, spaces, tab or semicolon.

Code Orientation Horizontal Read horizontal codes, vertical codes or both

Code to test 1234ABC The code emplace in here will be checked against the grammar and the result will be show as a overlay on the camera selected as a genesis sensor. Just a code should be witten and the validation will do when the configuration is set

Working Mode Freeflow Signaled: The application will only attempt to read a code when the signal is activated. Freeflow: The application continuously captures codes. Enter & Exit: The code is reported when it stop and when it leaves the slot.

Enable MxMessage ☒ Send a mxmessage when a code is read

Enable Overlay ☒ Display an overlay on all the sensors when a code is read

Set Factory Restore Close

Fig. 12: Basic settings

Grammar Strict: Read only codes that match a grammar.

Genesis Gramma: Define grammar rules for reading multi-line text strings. E.g. %D%D%D%D%L%L%L to read any combination of four digits and three letters like 1234ABC. Valid separators are commas, new line, spaces, tab or semicolon. For details on how to use the grammar settings see [Genesis Grammar, p. 28](#).

Code Orientation: Select the which code layout should be read. The options are.

Both

Horizontal codes

Vertical codes

Code to test: Enter a code to be checked against the grammar. The result will be shown as an overlay on the camera image.

Working mode: The following modes are available:

Free flow: The application continuously captures container code numbers.

Signaled: The application will only attempt to read a license plate number when the signal (trigger) is activated.

NOTE! In signaled mode an signal ID will be sent with the signal event.

Enable MxMessage: Check to enable the processing of container code events in the MxMessageSystem.

Enable Overlay: Check to enable the display of the container code recognition result in the live view.

Genesis Grammar

You can define grammar rules for reading multi-line text strings.

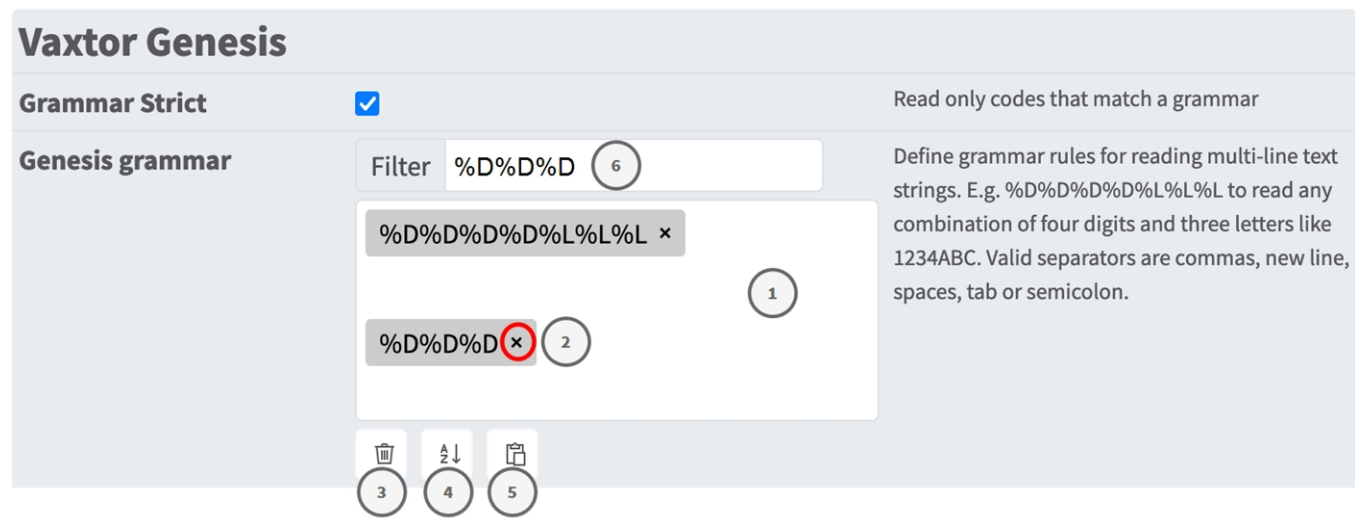

Fig. 13: Black and white lists

Adding a grammar string

1. Enter the text string into the text field. ① E.g. %D%D%D%D%L%L%L to read any combination of four digits and three letters like 1234ABC. Valid separators are commas, new line, spaces, tab or semicolon.
2. Click **Enter**.

Adding multiple grammar strings from a text file

1. Make sure that your text file contains onetext string per line.
2. Copy the relevant strings from the text file and paste them into the text field ① .

Deleting a grammar string

1. Click on the small x ② to the right of the text string.

Deleting all container codes from a list

1. Click the trash icon ③ .

Sorting all grammar strings alphabetically

1. Click the sort icon ④ .

Copy all grammar strings to the clip board

1. Click the copy to clipboard icon ⑤ .

Filtering grammar strings

1. Enter the grammar string or parts of it into the filter text field ⑥ . Only strings containing the filter text are displayed accordingly.

Recognition Areas

A Recognition Area, an area within the video frame where the OCR analytics takes place. You can draw a polygon and choose whether the area to look for plates in Inside or Outside this region. You can set multiple areas to respect complex situations.

NOTE! Using Recognition Area can decrease OCR processing time and also reduce false positives. The whole container code must be in or out the Recognition Area to pass the test.

Fig. 14: Recognition Areas

Recognition Area Type: Check to activate the sending of events according to the following configuration

Inclusion: only the plates inside the recognition area will be detected.

Exclusion: only the plates outside the recognition area will be detected.

Show Recognition Area: Check to display the recognition area in the camera image.

Drawing a Recognition Area

1. Click the **plus** icon to switch into the live image.
2. In the live view simply click and drag a rectangular recognition area.
3. Drag the corner points to refine the recognition area.
4. In the top right corner of the live view click **Submit** to adopt the coordinates of the rectangle.
5. Optionally click the **bin** icon ① to delete the recognition area.

List Management

You can define a black list and a white list with up to 1000 codes per list. If a code from one of the lists is recognized, a corresponding event is sent within the MxMessageSystem of the camera.

Fig. 15: Black and white lists

Adding a code to a list

1. Enter the code text into the text field ① and click **Enter**.

Adding multiple codes from a text file

1. Make sure that your text file contains one code per line.
2. Copy the relevant codes from the text file and paste them into the text field ①.

Deleting a code from a list

1. Click on the small x ② to the right of the code.

Deleting all codes from a list

1. Click the trash icon ③ .

Sorting all codes from a list alphabetically

1. Click the sort icon ④ .

Copy all codes from a list to the clip board

1. Click the copy to clipboard icon ⑤ .

Filtering codes

1. Enter the code or parts of it into the filter text field ⑥ . Only codes containing the filter text are displayed accordingly.

Video

In the video tab you can specify video quality of the video to be analyzed.

Video		
Minimum Character Height	18	Minimum character height in pixels (14-70). Tip: optimal reading size is 25 pixels height
Maximum Character Height	42	Maximum character height in pixels (14-70). Tip: optimal reading size is 25 pixels height
GENESIS Sensor	Right sensor	Sensor used to recognize codes
Overview Sensor	None	Sensor used to capture overview images when a code is detected
Resolution	1920x1080	Working resolution. Adjust the resolution and the camera zoom to capture the codes on the optimum range. Changing this option will require a camera reboot

Fig. 16: Video

OCR sensor: Select the camera sensor to be used for code recognition.

NOTE! Changing this option requires a camera reboot.

Overview Sensor: Optionally select a sensor used to capture overview images when a code is detected.

Resolution: Set the working resolution (current maximum is 1080p). Adjust the resolution and the camera zoom to capture the codes on the optimum range.

NOTE! Changing this option requires a camera reboot.

Minimum Character Height: the minimum height that a code’s characters should be before being read. The characters should be about 20-30 pixels high.

Maximum Character Height: the maximum height is about 20-30 pixels.

NOTE! The recommended difference between the min and max heights is about 10 pixels.

Environment

In the Environment tab you can set parameters in respect the environmental situation the codes are to be analyzed.

Environment

Same code Delay	60	Minimum elapsed time to report the same code twice (seconds)
Maximum Recognition Period	500	Maximum time the OCR can spend reading one or more times the same code (multiple samples) until making its final decision (ms)
Minimum codes Occurrences	1	Minimum number of times the code should be read within the "Max Recognition Period"
Maximum codes Occurrences	5	Maximum number of times the code should be read within the "Max Recognition Period". If the OCR reaches this number before the maximum recognition period expires, it will force out the code result
Reported Image	First	Define which image from the pool is returned with the metadata

Fig. 17: Environment

Code Plate Delay: Minimum elapsed time in seconds to report the same code twice. This is to prevent multiple reporting of the same code in situations when the appearance of codes is slow or stationary.

Example: If an object with a relevant code stops at a barrier and the code is reported but the object doesn’t move for 30 seconds, then this delay should be set to say 60 seconds or more to prevent a duplicate read.

NOTE! When using triggered mode, it is recommended that you set the delay to 0 seconds.

Maximum Recognition Period: Maximum time the OCR can spend reading one or more times the same code (multiple samples) until making its final decision (ms).

Minimum Plates Occurrences: Minimum number of times the code should be read within the "Max Recognition Period" before being reported.

Maximum Plates Occurrences: Set the maximum number of times that a code should be read before being reported (this may happen before the timeout).

Reported Image: Define which image from the pool is returned with the meta data. A code is normally read several times as it passes through the camera's field of view. You may want to use the latest (last) image for oncoming cars or the first image for vehicles moving away from the camera.

OCR

In the OCR (Optical Character Recognition) tab you can set parameters to ensure the best possible recognition results.

Genesis		
Code Color Contrast	Dark font on light background	Code color contrast. 1:dark font on light background, 2:light font on dark background, 3: both. Tip: do not use both unless it is really necessary
Minimum Code Characters	5	Minimum number of characters that the code may have (2-24)
Maximum Code Characters	9	Maximum number of characters that the code may have (2-24)
Multiline Reading	<input checked="" type="checkbox"/>	Read codes with 2 lines

Fig. 18: OCR

Code Color Contrast: Select the code color contrast here. There are three options: , 2, 3: both. Tip: yThere are three options.

Dark font on light background (default):

Light font on dark background:

Both: For higher performance and faster reading do not use both unless it is really necessary.

Minimum Code Characters: Minimum number of characters that the code may have (2-24).

Maximum Code Characters: Maximum number of characters that the code may have (2-24).

Multiline Reading: Reads codes with 2 lines.

Reporting

Vaxtor Genesis OCR App is able to output all plate reads in real time using a variety of standard protocols so that the plate reads can be accepted remotely by a variety of programs including MOBOTIXSYNC, which can accept and store plate reads in real time from hundreds cameras.

By selecting one of the listed protocols, a sub-menu will appear with fields for setting up parameters such as remote IP addresses etc.

Subpath: Define a subpath for the MxMessage. Check the [Variables / Template fieldsVariable / Template Fields, p. 43](#) for available keywords.

MOBOTIX HUB Analytic Event

MOBOTIX HUB Analytic Event

Enable	<input checked="" type="checkbox"/>	Enable MOBOTIX HUB Analytic Event reporting
URL	<input type="text" value="http://mobotixhubserver.com:9090/"/>	Destination URL
Camera name	<input type="text" value="10.X.X.X"/>	Camera name or IP address as defined in MOBOTIX HUB

MOBOTIX HUB Analytic Event: With the Analytics Events feature it is possible to send MAD (Milestone Alert Data) formatted alerts to the MOBOTIX HUB event server over TCP/IP.

Enable : Check to enable and configure MOBOTIX HUB Analytic Event reporting.

URL: Enter the corresponding MOBOTIX HUB Server URL (e.g. <http://mobotixhubserver.com:9090/>)

Camera name: Enter the camera name or IP address of this camera as defined in MOBOTIX HUB.

MOBOTIX HUB Transaction

MOBOTIX HUB Transaction

Enable	<input checked="" type="checkbox"/>	Enable MOBOTIX HUB Transaction reporting
Port	<input type="text" value="30001"/>	MOBOTIX HUB Server TCP Port
Template	<input type="text" value="@\$plateutf8\$@"/>	Template to use on the message, check the manual for available keywords

MOBOTIX HUB Transaction: With the Analytics Events feature it is possible to send transaction data to a MOBOTIX HUB server over TCP/IP port.

Enable : Check to enable and configure MOBOTIX HUB Transaction reporting.

Port: MOBOTIX HUB Server TCP Port.

Template: Template used when reporting. Check the [Variables / Template fields](#) [Variable / Template Fields](#), p. 43 for available keywords.

MOBOTIX SYNC

NOTE! The options in this section also apply to Vaxtor Helix servers.

MOBOTIX SYNC		
Enable	<input checked="" type="checkbox"/>	Send all results to the configured MOBOTIX SYNC server
URL	<input type="text"/>	MOBOTIX SYNC full URL address (https://mysync.server.com/sync)
API Key	<input type="text"/>	MOBOTIX SYNC API Key
Heartbeat	<input type="text" value="300"/>	Heartbeat timer in seconds (10 - 300) or 0 if heartbeat is disabled
Camera ID	<input type="text" value="1"/>	MOBOTIX SYNC camera ID assigned to this camera
Overview Camera ID	<input type="text" value="0"/>	MOBOTIX SYNC overview camera ID assigned to this camera (0 if none)
Sync lists	<input type="text" value="0"/>	Synchronize lists with MOBOTIX SYNC server

MOBOTIX SYNC: MOBOTIX SYNC protocol is an encrypted version of the Vaxtor protocol.

Enable : Check to enable and configure the reporting to a MOBOTIX SYNC server.

URL: Enter the full URL of your configured MOBOTIX SYNC server using this syntax https://<ip_or_server_name>/sync). When reporting to a Vaxtor Helix server, enter https://<ip_or_server_name>/helix6.

API Key: Enter the MOBOTIX SYNC (or Helix) API key generated from your server application.

Heartbeat: Sends a heartbeat every x seconds to the specified server (enter 0 to disable).

Camera ID: Enter MOBOTIX SYNC (or Helix) camera ID assigned to this particular camera.

Overview Camera ID: Enter the MOBOTIX SYNC (or Helix) overview camera ID assigned to this particular camera (set to 0 if none).

Sync lists: Synchronizes the lists with the MOBOTIX SYNC (or Helix) server.

JSON

JSON

Enable	<input checked="" type="checkbox"/>	Enable JSON HTTP/HTTPS POST reporting

Create bookmarks: Creates a new bookmark with each plate read by the app.

Raise custom events: Raises a new custom event with each plate read by the app.

Custom Event ID: Set a custom event ID.

Variable / Template Fields

Vaxtor Genesis OCR App only reserved variables

Variable	Description
\$confidencecode\$	Validation digit. (1=unverified, 2=Owner verified, 3=Owner and CD verified)
\$containercode\$	Container code number
\$controldigit\$	Container Code Control digit
\$direction\$	(0: unknown, 1: left, 2: right)
\$directionstr\$	(Unknown, Left, Right)
\$numdigits\$	Number of digits in the code
\$ownercity\$	Allocated city of the owner
\$ownercode\$	Allocated code of the owner
\$ownercompany\$	Owner company name
\$serialcode\$	Container Serial Code
\$sizetypecode\$	Container size & type code
\$USDOTcode\$	Number of digits in the code

Shared reserved variables

Variable	Description
\$absolutebottom\$	Plate bottom position based on the total image height (0-1).
\$absoluteleft\$	Plate left position based on the total image width (0-1).
\$absoluteright\$	Plate right position based on the total image width (0-1).
\$absolutetop\$	Plate top position based on the total image height (0-1).
\$blacklist\$	Description on the blacklist linked to the code/plate.
\$bottom\$	Bottom coordinate for the code/plate on the image (pixels).
\$category\$	Code/plate category for countries that support it.
\$charheight\$	Average character height (pixels).
\$confidence\$	Global confidence (0-100).
\$date\$	Timestamp in ISO8601 format.
\$epoch\$	Unix epoch (seconds).
\$etx\$	End of transmission character (HEX 03).

Configuration of Vaxtor Genesis OCR App

Reporting

Variable	Description
\$height\$	OCR image height.
\$id\$	Database ID for this read.
\$ifblacklist\$...\$ifblacklist\$	If the plate is on the blacklist, returns the text between these templates.
\$ifnolist\$...\$ifnolist\$	If the plate is not on any list, returns the text between these templates.
\$ifwhitelist\$...\$ifwhitelist\$	If the plate is on the whitelist, returns the text between these templates.
\$image\$	JPEG encoded in base64.
\$imageid\$	Signal ID in case of a trigger read.
\$imagesize\$	Size of saved complete image.
\$left\$	Left coordinate for the code/plate on the image (pixels)
\$localdate\$	Date in format "%d/%m/%Y" in the camera time zone.
\$localtime\$	Time in format "%H:%M:%S" in the camera time zone.
\$overviewimage\$	Overview JPEG image encoded in base64.
\$overviewimagesize\$	Overview image size in bytes.
\$processingtime\$	Processing time in milliseconds.
\$right\$	Right coordinate for the code/plate on the image (pixels)
\$safedate\$	Time stamp in format "%Y%m%d_%H%M%S" in the camera time zone (useful for file names).
\$sensor\$	Sensor (0, 1).
\$signaled\$	True if the read had been triggered.
\$signalid\$	Signal ID of the trigger.
\$stx\$	Start of transmission character (HEX 02).
\$timestamp\$	Time stamp in format "yyyy-MM-ddTHH:mm:sszzz".
\$stop\$	Top coordinate for the code/plate on the image (pixels).
\$utctime\$	Time stamp in ISO8601 format but always in UTC (2020-12-31T16:11:30.000Z).
\$whitelist\$	Description on the whitelist linked to the code/plate.
\$width\$	OCR image width.

Advanced

In this section you find useful tools for calibration and trouble shooting.

Fig. 19: Advanced

Log level: Select a debug level to generate a log file, which can be helpful e.g. for trouble shooting.

Info: Default log level

Trace: Select e. g. for diagnostic messages received from third parties

Debug: Select for complete log files for debug purposes

Show log file on screen: Check to display the on-screen log file on the selected sensor

Sensor: Select the sensor on which the on-screen log file is displayed

Show Calibration Grid: Check to display on the OCR sensor a 20 pixels height grid

Storing the Configuration

To store the configuration you have the following options:

Fig. 20: Storing the configuration

- Click on the **Set** button to activate your settings and to save them until the next reboot of the camera.
- Click on the **Factory** button to load the factory defaults for this dialog (this button may not be present in all dialogs).
- Click on the **Restore** button to undo your most recent changes that have not been stored in the camera permanently.
- Click on the **Close** button to close the dialog. While closing the dialog, the system checks the entire configuration for changes. If changes are detected, you will be asked if you would like to store the entire configuration permanently.

After successfully saving the configuration, the event and meta data are automatically sent to the camera in case of an event.

After successfully saving the configuration, the event and meta data are automatically sent to the camera in case of an event.

MxMessageSystem

What is MxMessageSystem?

MxMessageSystem is a communication system based on name oriented messages. This means that a message must have a unique name with a maximum length of 32 bytes.

Each participant can send and receive messages. MOBOTIX cameras can also forward messages within the local network. This way, MxMessages can be distributed over the entire local network (see Message Area: Global).

For example, a MOBOTIX 7 series camera can exchange a MxMessage generated by a camera app with an Mx6 camera that does not support certified MOBOTIX apps.

Facts about MxMessages

- 128-bit encryption ensures privacy and security of message content.
- MxMessages can be distributed from any camera of the Mx6 and 7 series.
- The message range can be defined individually for each MxMessage.
 - **Local:** Camera expects a MxMessage within its own camera system (e.g. through a Certified App).
 - **Global:** the camera expects a MxMessage that is distributed in the local network by another MxMessage device (e.g. another camera of the 7 series equipped with a certified MOBOTIX app).
- Actions that the recipients are to perform are configured individually for each participant of the MxMessageSystem.

MxMessageSystem: Processing the automatically generated app event

Checking automatically generated app events

NOTE! After successfully activating the app (see [Activation of the Certified App Interface, p. 25](#)), a generic message event for this specific app is automatically generated in the camera.

1. Go to **Setup-Menu / Event Control / Event Overview**. In section **Message Events** the automatically generated message event profile is named after the application (e. g. VaxOCRGenesis).

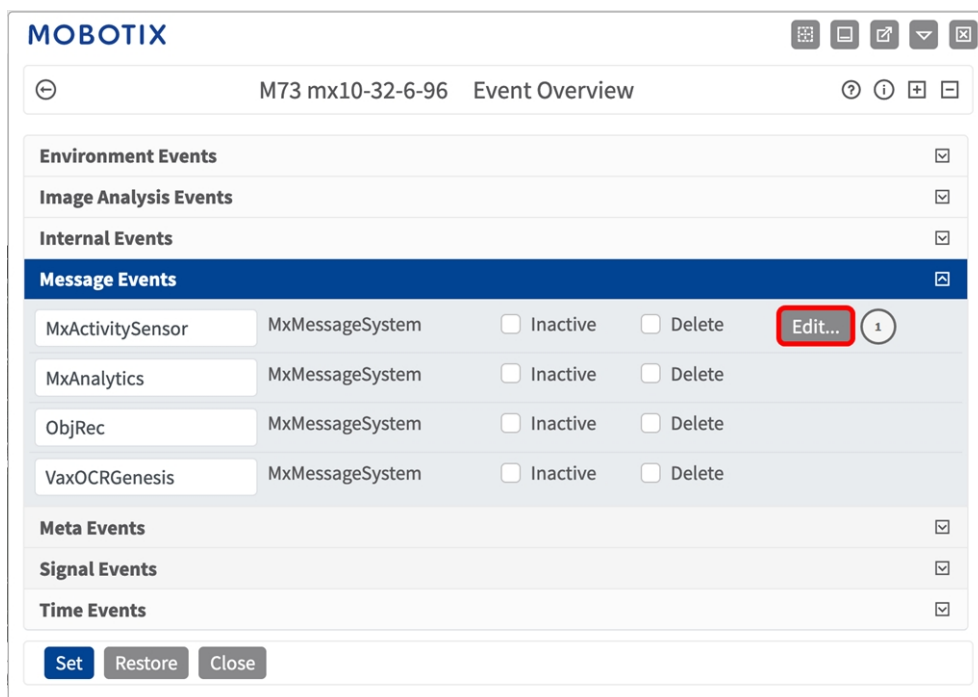

Fig. 21: Example: Generic message event from Vaxtor Genesis OCR App

2. Click **Edit**① to display a selection of all configured message events.

The screenshot shows the MOBOTIX web interface for configuring message events. The title bar indicates 'M73 mx10-32-6-96 Message Events'. A table lists three events: MxAnalytics, ObjRec, and VaxOCRGenesis. The VaxOCRGenesis event is selected, and its configuration is displayed below. The configuration includes: Event Dead Time (5), Event Sensor Type (MxMessageSystem), Event on receiving a message from the MxMessageSystem, Message Name (VaxOCRGenesis), Message Range (Local), and Filter Message Content (No Filter). There are buttons for 'Add new profile', 'Set', 'Factory', 'Restore', and 'Close'.

Fig. 22: Example: Generic message event details - no filter

Action handling - Configuration of an action group

CAUTION! To use events, trigger action groups or record images the general arming of the camera must be enabled ([http\(s\)/<Camera IP address>/control/settings](http(s)/<Camera IP address>/control/settings))

An action group defines which action(s) is (are) triggered by the Vaxtor Genesis OCR App event.

1. Go to **Setup-Menu / Event Control / Event Overview / Action Group Overview** ([http\(s\)://<Camera IP address>/control/actions](http(s)://<Camera IP address>/control/actions)).

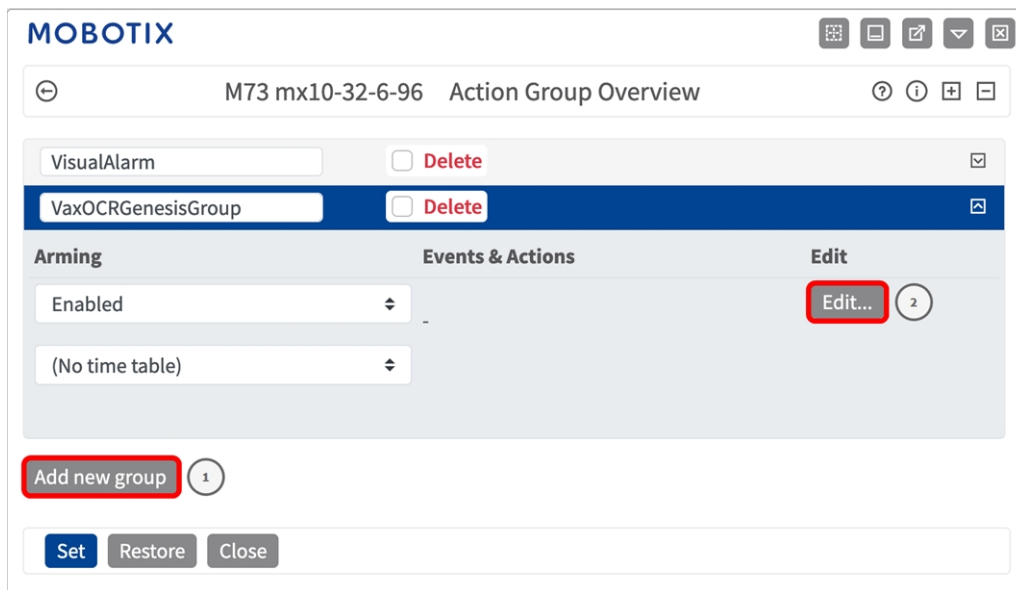

Fig. 23: Defining Action Groups

2. Click **Add new group**^① and give a meaningful name.
3. Click **Edit**^②, to configure the group.

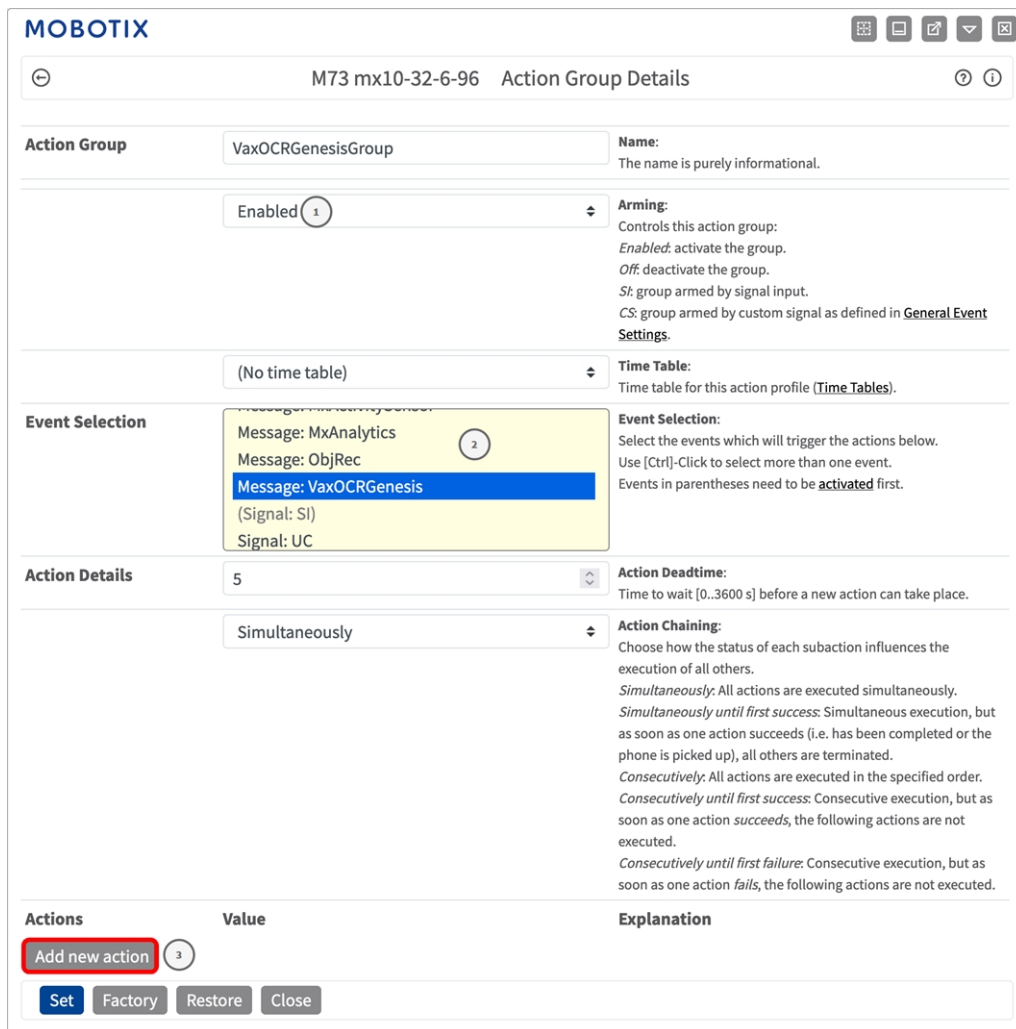

Fig. 24: Configuring an Action Group

1. Enable **Arming**① of the Action Group.
2. Select your message event in the **Event selection** list ② . To select multiple events, hold the shift key.
3. Click **Add new Action**③ .
4. Select a proper action from list **Action Type and Profile**④ .

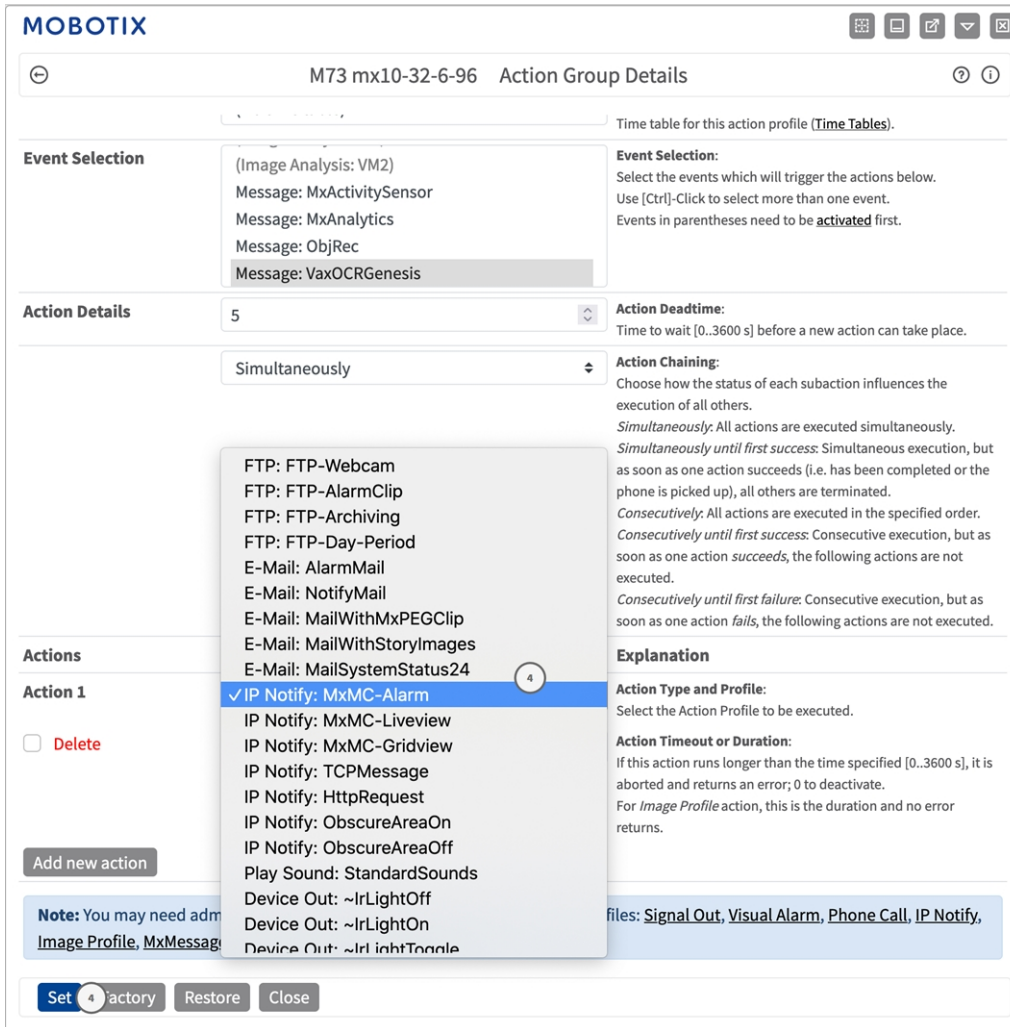

Fig. 25: Select Action Type- and Profile

NOTE! If the required action profile is not yet available, you can create a new profile in the Admin Menu sections "MxMessageSystem", "Transfer Profiles" and "Audio and VoIP Telephony".

If necessary, you can+ add further actions by clicking the button again. In this case, please make sure that the "action chaining" is configured correctly (e.g. at the same time).

5. Click **Set**⑤ to confirm the settings.

Action settings - Configuration of the camera recording

1. In the camera web interface, open: **Setup Menu / Event Control / Recording** ([http\(s\)/<Camera IP address>/control/recording](http(s)/<Camera IP address>/control/recording)).

MOBOTIX

M73 mx10-32-6-96 Recording

General Settings

Value	Explanation
Arming: Enabled ¹	Arm Recording: Controls camera recording. <i>Enabled:</i> activate recording. <i>Off:</i> deactivate recording. <i>SI:</i> recording armed by signal input. <i>CS:</i> recording armed by custom signal as defined in General Event Settings . <i>From Master:</i> copies recording arming state from master camera.
(No time table)	Time Table Profile: Time table profile for time-controlled recording (Time Tables).

Storage Settings

Value	Explanation
Recording (REC): Event Recording ²	Recording Mode: Type of event and story recording. <i>Snap Shot Recording:</i> stores single JPEG pictures. <i>Event Recording:</i> stores stream files for every event using MxPEG codec. <i>Continuous Recording:</i> continuously streams video data to stream files using MxPEG codec. Events can be recorded with a higher frame rate using <i>Start Recording</i> , <i>Retrigger Recording</i> and <i>Stop Recording</i> .
Include audio	Record Audio Data: Store audio data in stream file if available. Enable and configure microphone .

Start Recording

Value	Explanation
Message: MxAnalytics Message: ObjRec Message: VaxOCRGenesis ³ (Signal: SI) Signal: UC	Start Recording: Select the events which will start recording. Use [Ctrl]-Click to select more than one event. Events in parentheses need to be activated first.
Max fps	Event Frame Rate: Recording speed if an event is detected, in frames per second.
0	Recording Time Before Event: Additional recording time before an event in seconds.
10 s	Recording Time: Time to include in recorded stream after an event has occurred.

Set ⁴ Factory Restore Close ⁵ More

Fig. 26: Configuration of camera recording settings

2. Activate **Arm Recording**^①.
3. Under **Storage Settings / Recording (REC)** select a **Recording mode**^②. The following modes are available:
 - Snap Shot Recording
 - Event Recording
 - Continuous Recording
4. In list **Start recording**^③ select the message event just created.
5. Click on the **Set**^④ button at the end of the dialog box to confirm the settings.
6. Click on **Close**^⑤ to save your settings permanently.

NOTE! Alternatively, you can save your settings in the Admin menu under Configuration / Save current configuration to permanent memory.

Advanced Configuration: Processing the meta data transmitted by apps

Meta data transferred within the MxMessageSystem

For each event, the app also transfers meta data to the camera. This data is sent in the form of a JSON schema within a MxMessage.

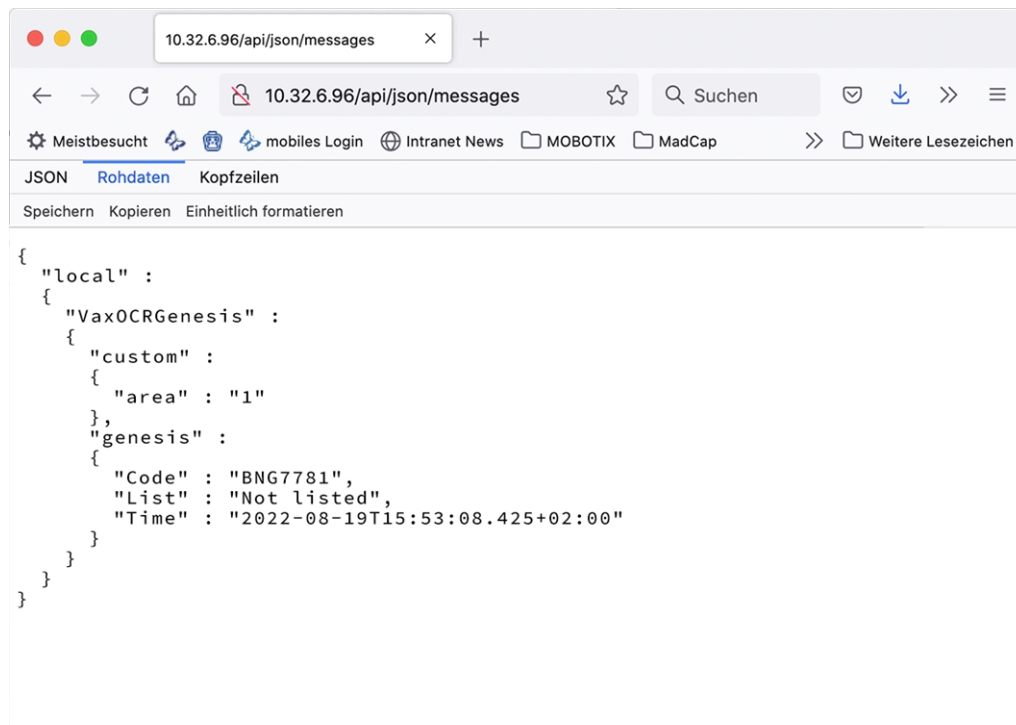

Fig. 27: Example: Meta data transmitted within a MxMessage of the Vaxtor Genesis OCR App

NOTE! To view the meta data structure of the last App event, enter the following URL in the address bar of your browser: `http(s)/IPAdresseOfYourCamera/api/json/messages`

Creating a Custom Message Event

- 1. Go to **Setup-Menu / Event Control / Event Overview**. In section **Message Events** the automatically generated message event profile is named after the application (e. g. VaxOCRGenesis).

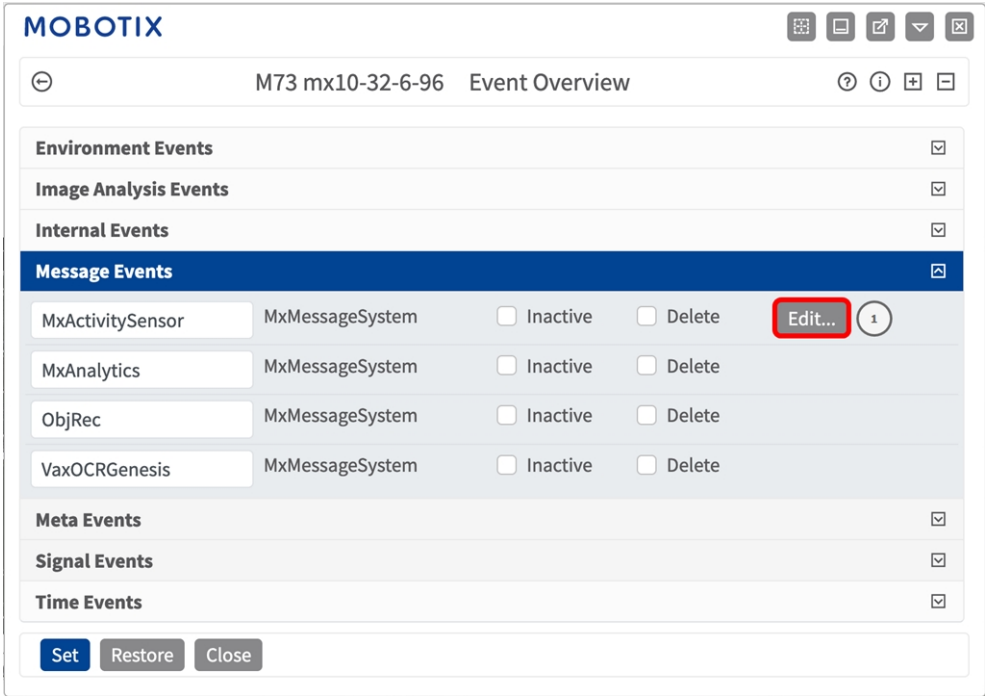

Fig. 28: Example: Generic message event from Vaxtor Genesis OCR App

- Click **Edit** ① to display a selection of all configured message events.

MOBOTIX D71 mx10-32-105-6 Message Events

Attribute	Value	Explanation
IP Receive	8000	Port: TCP port to listen on.

Events	Value	Explanation
MxActivitySensor	<input type="checkbox"/> Inactive <input type="checkbox"/> Delete	
MxAnalytics	<input type="checkbox"/> Inactive <input type="checkbox"/> Delete	
ObjRec	<input type="checkbox"/> Inactive <input type="checkbox"/> Delete	
VaxOCRGenesis	<input checked="" type="checkbox"/> Inactive <input type="checkbox"/> Delete	

VaxOCRGenesis settings:

Event Dead Time: 5
Time to wait [0..3600 s] before the event can trigger anew.

Event Sensor Type: ☐ IP Receive ☒ MxMessageSystem
Choose the message sensor.

Event on receiving a message from the MxMessageSystem.

Message Name: VaxOCRGenesis.genesis.List
Defines an MxMessageSystem name to wait for.

Message Range: Local
There are two different ranges of message distribution:
Global: across all cameras within the current LAN.
Local: camera internal.

Filter Message Content: JSON Comparison
Optionally choose how to ignore messages containing Filter Value. Select No Filter to trigger on any message with defined Message Name.

Filter Value: "White List"
Define either a valid reference value as a string (in JSON format) without line breaks, or an extended regular expression. Open help for examples.
This parameter allows using variables.

Add new profile

Set Factory Restore Close

Fig. 29: Example: Whistle list message event

- Click on the event (e. g. VaxOCRGenesis) ① to open the event settings.
- Configure the parameters of the event profile as follows:
 - Message Name:** Enter the "Message Name" ② according to the event documentation of the corresponding app (see [Examples for message names and filter values of the \[%=CameraApps.ProductName\]](#))
 - Message Range:**
 - Local: Default settings for the Vaxtor Genesis OCR App
 - Global: (MxMessage is forwarded from another MOBOTIX camera in the local network.

- **Filter Message Content:**
 - **No Filter:** Trigger on any message according to the defined **Message Name**.
 - **JSON Comparison:** Select if filter values are to be defined in JSON format.
 - **Regular Expression:** Select if filter values are to be defined as regular expression.
- **Filter Value:** ③ see [Examples for message names and filter values of the \[%=Ca-ameraApps.ProductName](#).

CAUTION! “Filter Value“ is used to differentiate the MxMessages of an app / bundle. Use this entry to benefit from individual event types of the apps (if available).
Choose “No Filter” if you want to use all incoming MxMessages as generic event of the related app.

2. Click on **Set** ④ at the end of the dialog box to confirm the settings.

Examples for message names and filter values of the Vaxtor Genesis OCR App

	MxMessage-Name	Filter value
Generic Event	VaxOCRGenesis	
White list Event	VaxOCRGenesis.genesis.List	“White list”
Black list Event	VaxOCRGenesis.genesis.List	“Black list”
Not listed Event	VaxOCRGenesis.genesis.List	“Not listed”
Unique container code event	VaxOCRGenesis.genesis.Code	Code as “STRING”; e.g. “BVB1909” (compare Meta data transferred within the MxMessageSystem, p. 55)
