About the Manual

This manual is intended for administrators and users of the MOBOTIX SYNC application.

The most recent version of this document is available at www.mobotix.com.

Before using SYNC it is recommended that you read through the entire manual at least once.

About MOBOTIX SYNC

MOBOTIX SYNC is a Back Office application which can centrally manage ANPR reads transmitted from ALPR cameras performing access control, parking or traffic applications in any environment. Once set up, ALPR reads will be received and processed (e.g. checking for White lists, generating alarms, controlling barriers etc.).

SYNC provides total control of vehicle traffic not only by recording vehicle movements through established control points, but also by automating access to restricted areas, issuing alerts for selected vehicles (using blacklists), generating reports with images and acting as the main application for real-time monitoring and control of vehicles across a site.

From the most basic management of a private car park to the control of traffic across a city, SYNC facilitates enforcement management, access control to restricted areas, average speed control of a vehicle between two points and average speed data transmission to LED Signs, etc.

Order Information

Product Name	Order Code
MOBOTIX SYNC Server	Mx-SYNC-S-BAS
MOBOTIX SYNC Camera Device License	Mx-SYNC-S-DEV
MOBOTIX SYNC Client	Mx-SYNC-S-CLI
MOBOTIX SYNC Grafana Plug-In	Mx-SYNC-P-GRA

Technical Requirements

Minimum PC Requirements

NOTE! Do not install on a Virtual Machine (VM)!

- Windows 7 or higher
- 64 bits (x64) processor at 1GHz or higher
- 4GB Ram
- 20GB HDD Space
- Microsoft.NET Framework 4.5.2 or higher

Database Requirements

- Postgres (included)
- Postgres password must match the "password policy" of the client computer.
- SQL (to be utilized in large scale deployments, license not included)

NOTE! Postgres is the included database manager and does not need any additional components.

Network Requirements

- Port 8080 must be open on your firewall.
- Gigabit Ethernet recommended.

Licensing MOBOTIX SYNC

The following licenses are available for MOBOTIX SYNC:

- **30-day test license** pre-installed
- **permanent commercial license**

The usage period starts with the activation of the license. This is carried out via the MOBOTIX license portal.

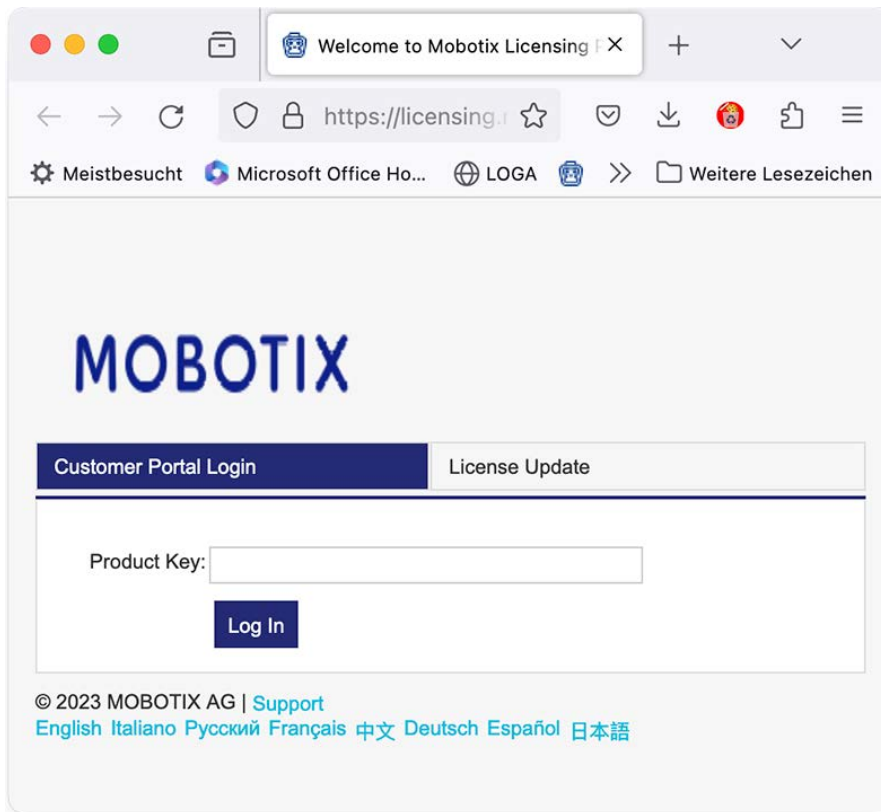

NOTE! For buying or renewing a license, contact your MOBOTIX Partner.

CAUTION! If you replace the hardware components on the SYNC server, the license may become invalid. In this case, please contact MOBOTIX support.

Online Activation

NOTE! The computer where MOBOTIX SYNC is running requires an active Internet connection.

1. Open the license portal at <https://licensing.mobotix.com>.

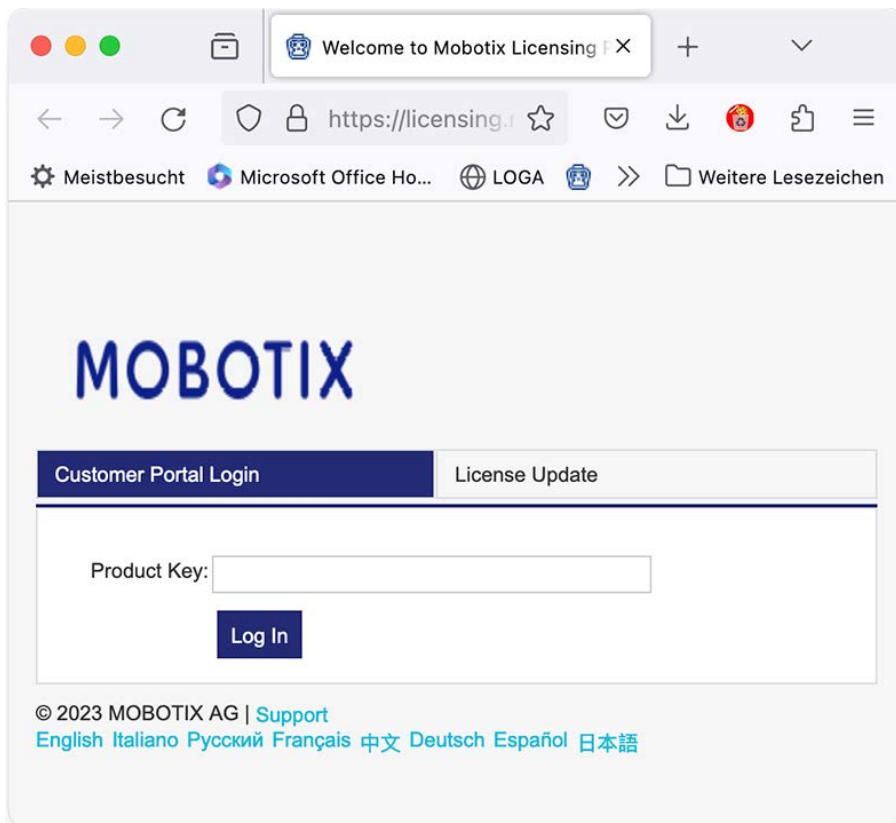

2. Click **Online Activation**. The license key is checked and activated if it is valid.

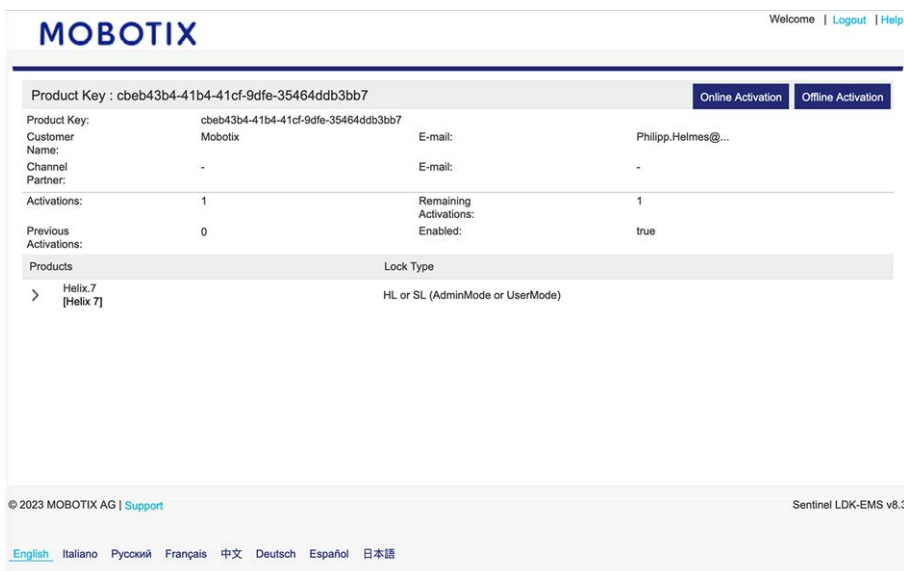

Offline Activation

NOTE! If the computer where MOBOTIX SYNC is installed (hereafter referred to as Offline PC) doesn't have Internet access, an additional PC (hereafter referred to as Online PC) with active Internet connection is required.

1. On the Online PC open the license portal at <https://licensing.mobotix.com>.

2. Enter your product key and click **Log In**. The license information are displayed.

- Click **Offline Activation**. The Generate License Window appears.

Product Features

Supported Products

The following MOBOTIX products support MOBOTIX SYNC meta-data reporting:

Certified Apps

- VaxALPR
- VaxALPR MMC
- VaxALPR ADR
- VaxOCR Container
- VaxOCR AIN
- VaxOCR UIC
- VaxOCR Genesis

MOBOTIX MOVE

- All MOBOTIX MOVE models equipped with VaxALPR support MOBOTIX SYNC meta data reporting.

MOBOTIX SYNC Server

- Store meta-data and attached images generated by MOBOTIX Certified Apps (e.g. Vaxtor ALPR / OCR Apps) or other compatible data sources
- 4 camera device licenses included
 - additional camera device licenses via additional license on demand
- Monitor incoming license plates / meta-data (e.g. plate reads) in real time
- Search and filter existing license plates / meta-data based on content such as Plate, Country, Camera, Zone, Make, Model, Color, Direction, etc.
- Download and export customized license plate lists and search results

- Management of cameras includes:
 - camera zones
 - manage and synchronize denied & granted license plate list
- assign actuators (incl. camera I/Os)
- manage data retention policies separately for images and meta-data
- supports GDPR measures with dedicated reports and data deletion
- granular user and group permissions
- login management including LDAP integration
- audit trail of all interactions on the system including actions made by cameras
- Send notifications (e.g. via E-Mail)

MOBOTIX SYNC Camera Device License

- 1 camera device license per additional camera device
- Enables adding camera devices to the server/client on demand

NOTE! *4 camera device licenses included in the server base license

MOBOTIX SYNC Client

- redundant operation and data storage for applications with discontinuous connection to the server (e.g. mobile applications)
- active server connection enables continuous data synchronization
- licensed camera devices assigned to the server

MOBOTIX SYNC Grafana Plug-In

- visualization and consolidation of incoming meta-data in customized dashboards including:
 - statistic insights
 - data queries
 - annotations
 - create and manage alerts / post-actions
 - exports

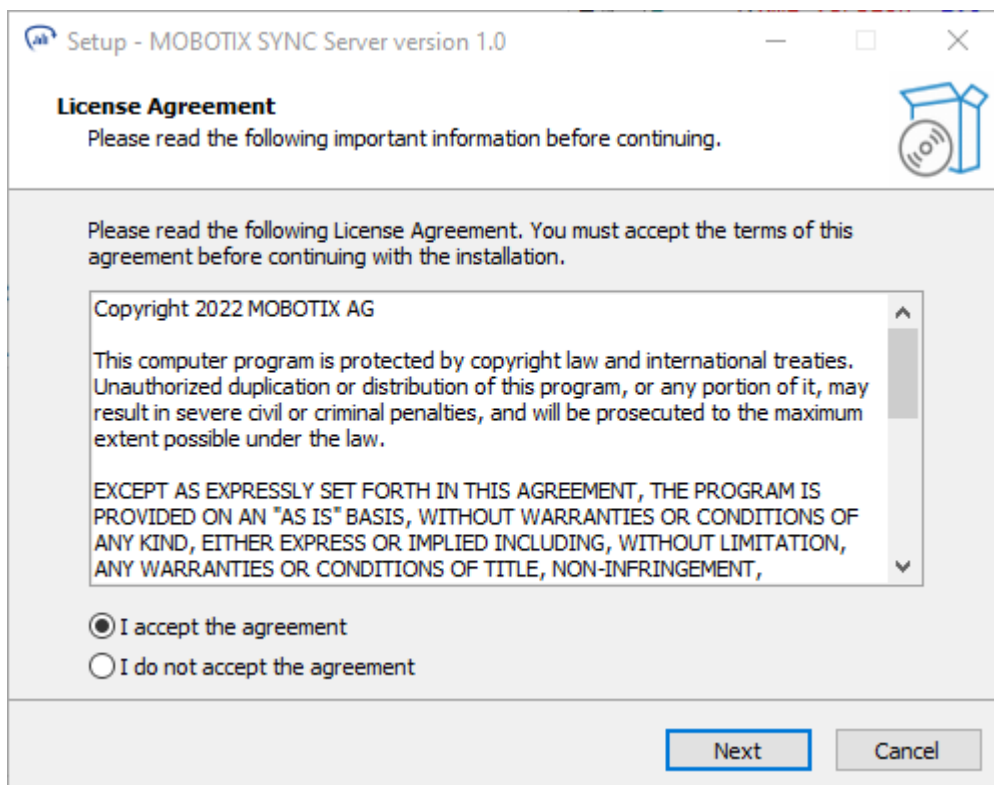

Software installation

NOTE!

In case of an update installation, all previously installed components are uninstalled before their current version is installed.

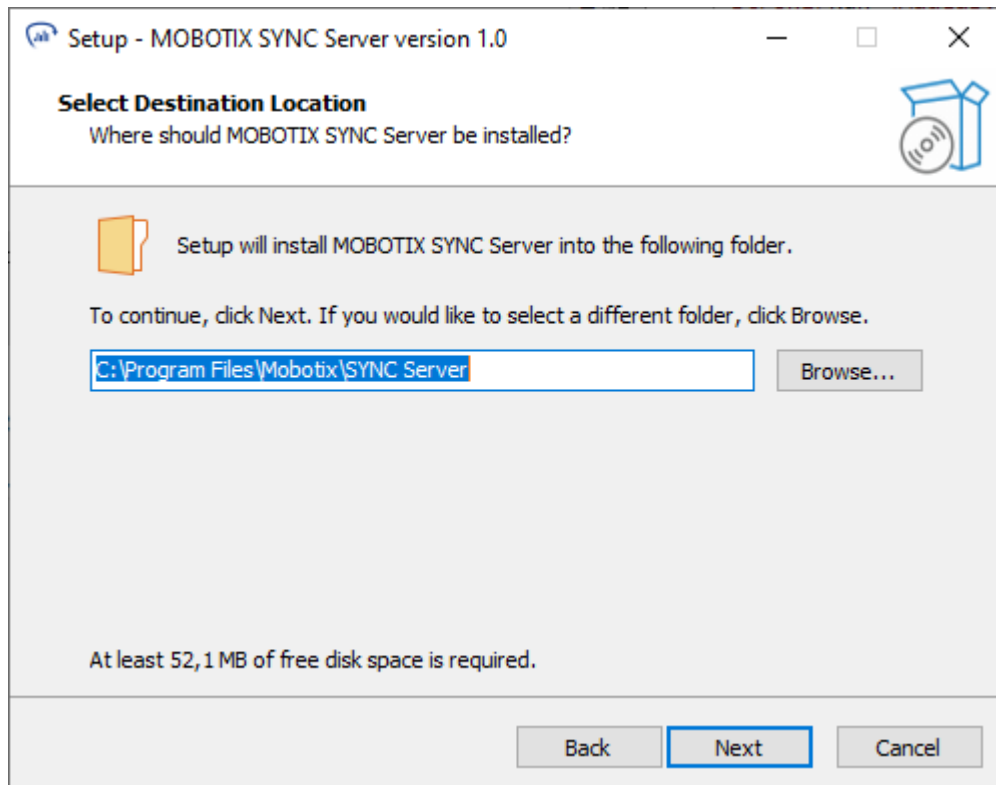

Therefore it's strongly recommended not to deselect the previous installed components.

- Run **MOBOTIX_SyncServer_64-setup.exe** as an administrator. In the first window accept MOBOTIX's License Agreement and click **Next**.

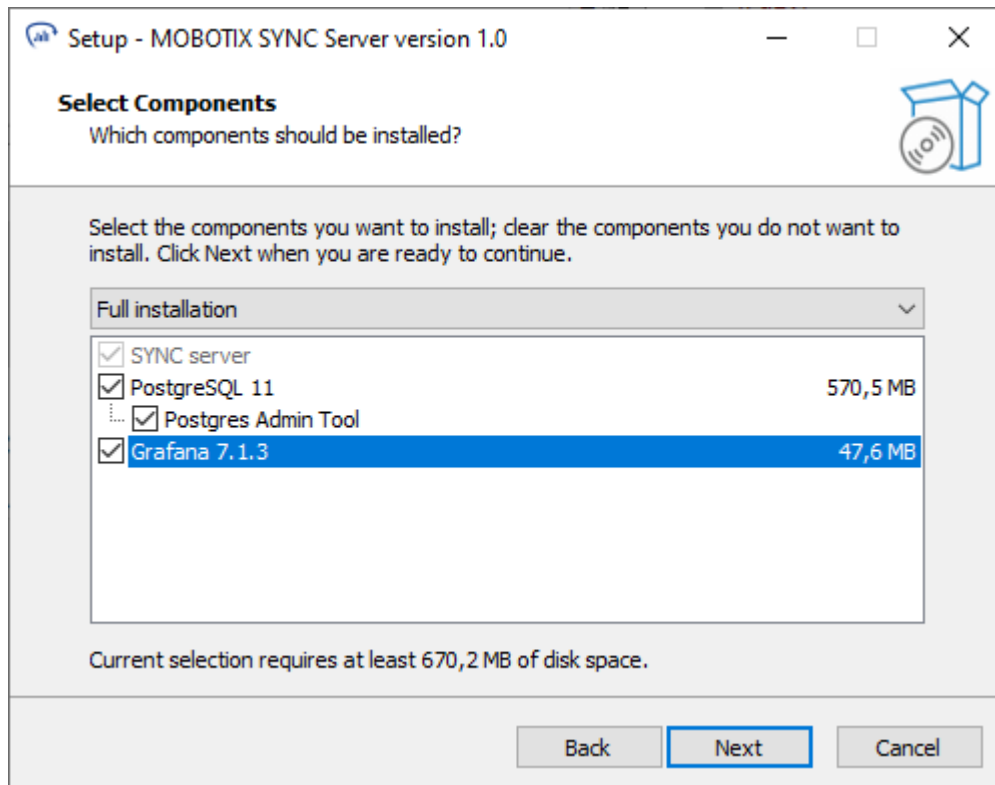

- Within the next dialog you can define where to install the application. Click **Next**.

NOTE! If you do not have to apply internal rules, we recommend to use the default path to minimize the risk of duplicate data storage (e.g. in case of new installations / updates).

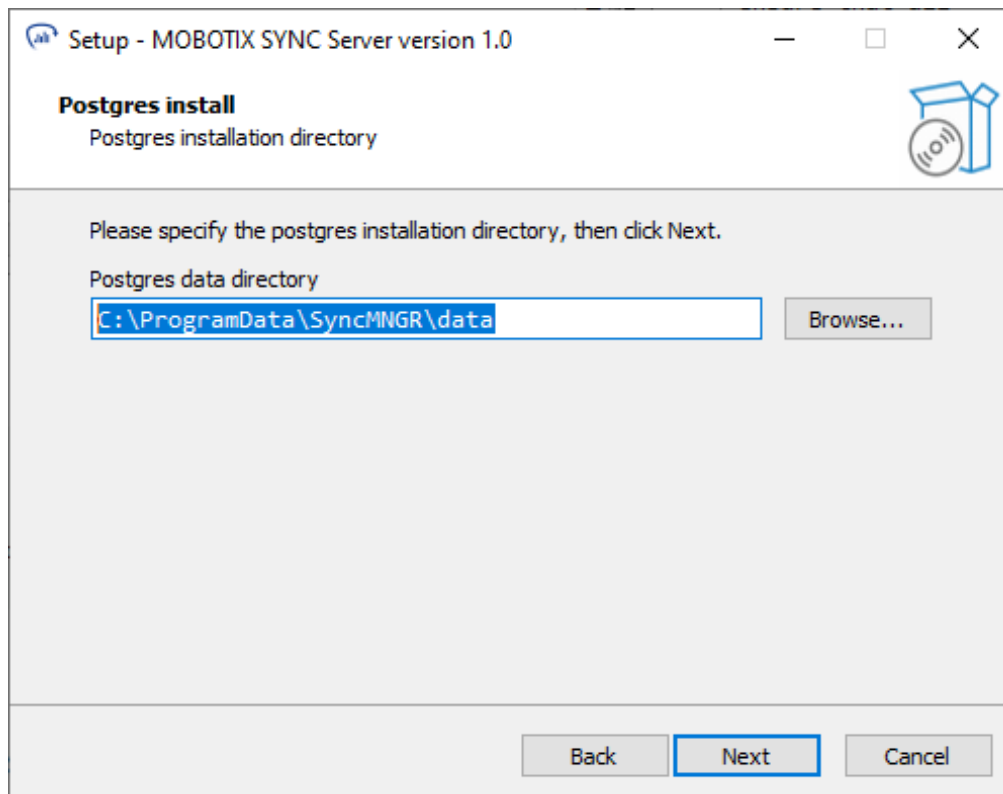

- Select the required software components and click **Next**.

NOTE! We strongly recommend to select the “Full Installation” profile. This way you ensure that all components required for the complete function of MOBOTIX SYNC are available at any time.

- Leave the default postgres installation path and click **Next**.

- **CAUTION!** Make sure that you can remember the Username and Password at any time. These data are needed in case of a new installation of the MOBOTIX SYNC (e.g. for troubleshooting purposes) and possibly also for updates in order to be able to continue using the already existing database.

Enter Username and Password for the Postgres service user. Click **Next**:

Setup - MOBOTIX SYNC Server version 1.0

Postgres credentials
Postgres credentials

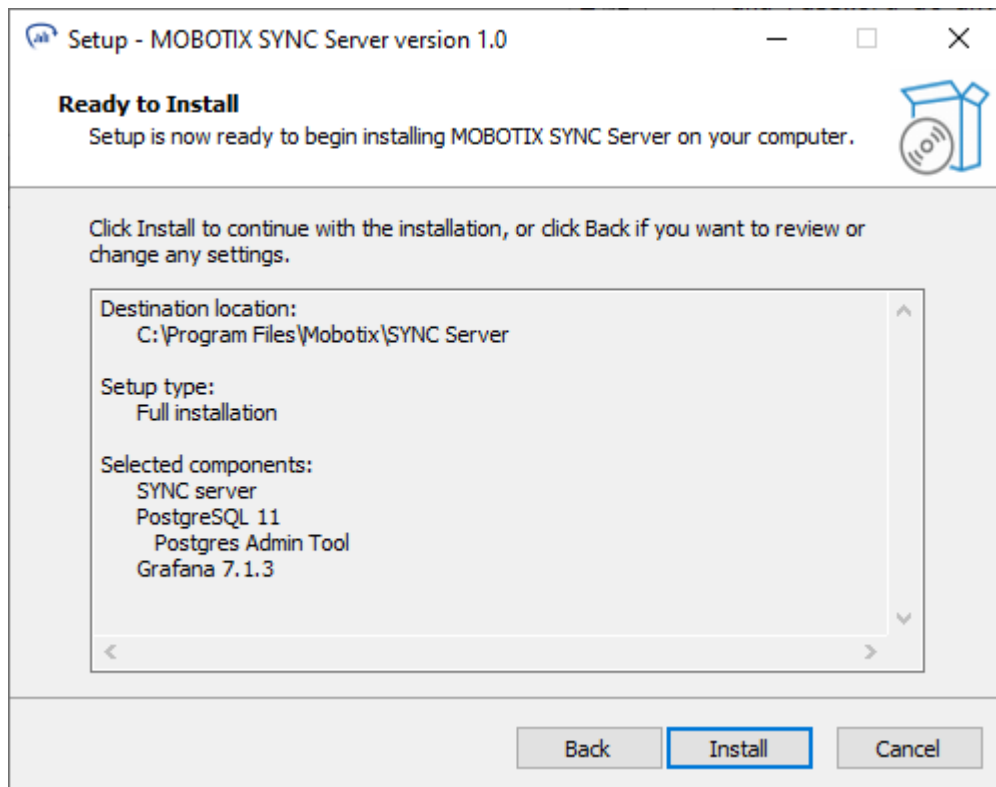

Please specify username and password for the Postgres service user, then click Next.

Username:

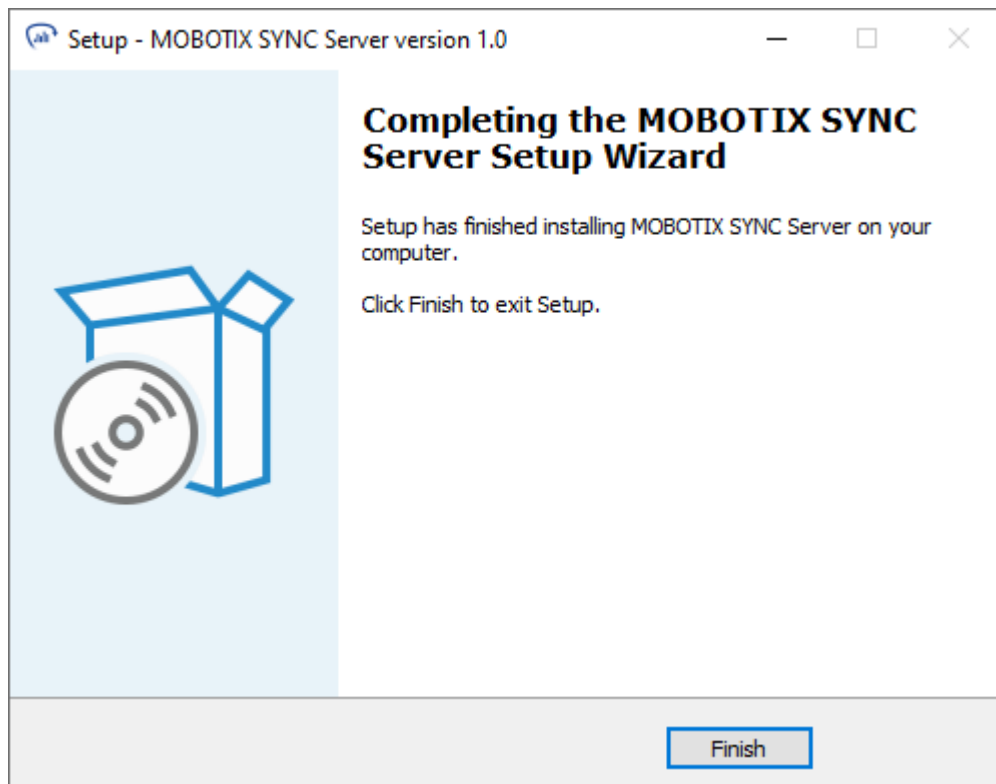

Password:

Back Next Cancel

- Click **Install** to start the installation:

- Once the installation is complete, click Finish.

A new service called **SyncMNGR** will be installed and automatically started.

NOTE! If you want to start the **SyncMNGR** service and thus also the MOBOTIX SYNC application manually, you can adjust the behavior of the service in the services settings of the Windows operating system.

3rd Party Integration

If MOBOTIX SYNC

is implemented in another applications, the authentication requires the "Basic Authentication" method.

Typical examples of third-party applications are MOBOTIX HUB VMS Plugin - MOBOTIX SYNC Dashboard or the MOBOTIX SYNC Dashboard for Milestone XProtect.

1. On the MOBOTIX SYNC server, open the configuration C:\ProgramData\SyncMNGR\config.xml
2. Add the following line to the configuration:

```
<AuthenticationMethod>Basic</AuthenticationMethod>
```

```
C: > ProgramData > SyncMNGR > config.xml
1  <Config>
2  |   <PostgresDBHost>127.0.0.1</PostgresDBHost>
3  |   <Helix6DB>postgres</Helix6DB>
4  |   <PostgresDBUser>sync</PostgresDBUser>
5  |   <PostgresDBPassword>meinsm</PostgresDBPassword>
6  |   <PostgresDBName>sync</PostgresDBName>
7  |   <EnableSsl>True</EnableSsl>
8  |   <BindAddress>*</BindAddress>
9  |   <SslPort>9898</SslPort>
10 |   <ApiKey>9113c6e6cb854ef6b7ac08765bd14d98</ApiKey>
11 |   <AuthenticationMethod>Basic</AuthenticationMethod>
12 |   <MaximumConcurrentPetition>0</MaximumConcurrentPetition>
13 |   <UpdateInterval>1440</UpdateInterval>
14 |   <RedirectToHttps>False</RedirectToHttps>
15 |   <UpdateMode>Off</UpdateMode>
16 |   <SslCertHash>8bf574341ef69f6ebd412d3785ad6a92cce38b2e</SslCertHash>
17 |   <LogLevel>Trace</LogLevel>
18 | </Config>
```

3. Save the changes in config.xml
4. Restart the SyncMNGR service.

You can then use basic authentication with the MOBOTIX SYNC server.

The Application

After installation, MOBOTIX SYNC can be accessed by the URL <http://serverip:8080/SYNC>, where serverip is the IP address of the machine where SYNC is installed.

NOTE! If the server is running on your local machine use 127.0.0.1/8080/SYNC or localhost:8080/SYNC

Basic Configuration

NOTE! You must restart the service to apply any changes.

This configuration can be changed by editing the file config.xml stored in the directory C:\ProgramData\SynchMNGR and adding to it a new SYNC Port tag.

Example (using SQLite database):

```
<Config>
  <SslPort>9898</SslPort>
  <BindAddress>*</BindAddress>
  <EnableSsl>False</EnableSsl>
  <ApiKey>29bb7fac5eed46edb4fb2833db89ecec</ApiKey>
  <AuthenticationMethod>Forms</AuthenticationMethod>
  <Helix6Port>30000</Helix6Port>
</Config>
```

Valid tags and values for config.xml file

Field	Description	Mandatory

AuthenticationMethod	Valid values none Basic Forms Default value: Forms	M
LogLevel	Valid values: Info Debug Trace. Default value Info	Op

NOTE! To apply your changes the "SyncMNGR" service must be restarted.

Login

After you have connected to the SYNC in your browser application, the login screen will be displayed.

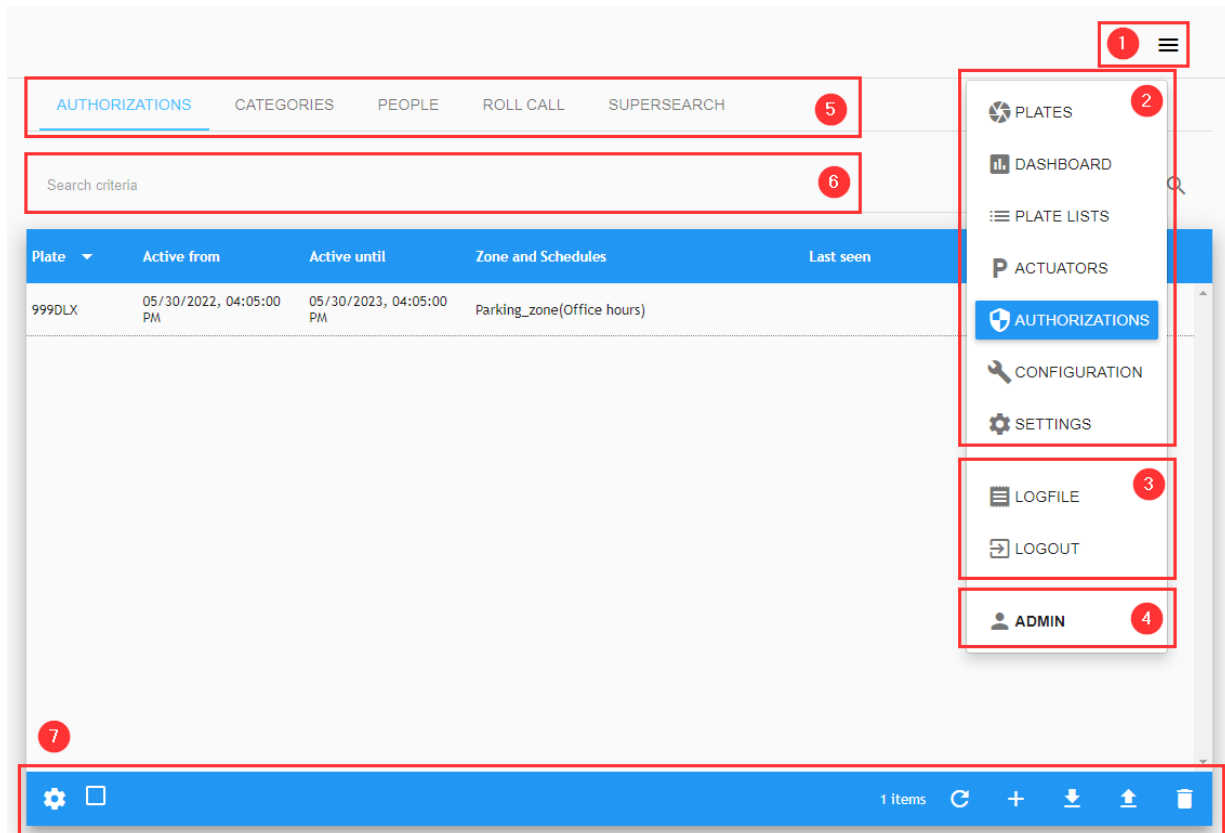

NOTE! The default username is **admin** with password **meinsm** when no other users have been added to the system.

We recommend to change the default login data as soon as possible to protect yourself from unauthorized access.

If you have already been given personalized access by an admin, use your personal login data to log in.

Optionally select the **Remember me** option so that the system saves your credentials for one week.

SYNC Application Layout

Main Menu

To access the main menu, click the main menu button ① .

- Here you can access the following features ② :
 - PLATES
 - DASHBOARD
 - PLATE LISTS
 - ACTUATORS
 - CONFIGURATION
 - SETTINGS

- Tools ③ :
 - LOGFILE (Click to view the SYNC log file(s).)
 - LOGOUT
- Current user ④ (default: ADMIN)

Secondary Menus

The Secondary Menus ⑤ show more options for each Main Menu option:

- **DASHBOARD**
 - Dashboard
 - Dashboard Setup
- **PLATE LISTS**
 - Plates
 - List
- **ACTUATORS**
 - Actuators
 - Actuator Links
- **CONFIGURATION**
 - Zones
 - Cameras
 - Schedule
 - Sections
 - Capacity
- **SETTINGS**
 - Settings
 - Users
 - Audit
 - GDPR

Search area

Some features have a search criteria ⑥ area where various fields can be searched.

Toolbar

Some menus have additional tools such as columns configuration, reload, create, download file, upload file, delete etc. These tools are displayed in the Toolbar ⑦ .

Contextual menu

The screenshot shows a table with columns: Id, Name, Type, Description, Color, Users, Zone, and Owner. A contextual menu is open over the row with Id 30 and Name 'list2'. The menu has two main sections: 'Plate list 'list2'' (actions) and 'Filter by' (filters). The actions section includes Edit, Import, Renew for one year, and Delete. The filter section includes Type and Zone. A red circle highlights the 'list2' name in the table, and another red circle highlights the 'Plate list 'list2'' header in the menu. Red arrows point from the 'list2' name to the menu and from the menu header to the 'list2' name. A red circle with the number 1 is next to the 'Edit' option, and a red circle with the number 2 is next to the 'Filter by' section.

Id	Name	Type	Description	Color	Users	Zone	Owner
30	list2	Black list		#FFFCC	timo vaskin	Axis Finland	timo vaskin
20	List that I want to sync	White list		#000000	camera_list	List sync testing	jigarcia
76	Lista demo Paula	White list		#00D9FF	paula	Parking demo	paula
25	Delivery cleared List	Black list		#000000	vaxtor-asia	Indonesia-POC	vaxtor-asia
13	Kedacom	Black list		#000000	ogarate	K-Test	ogarate
26	Civica Staff	White list		#D92F1C	lawson	Civica	lawson
86	list_to_delete	Black list		#FB0404		ADT-POC	admin_user
83	Spyglass - test	Black list		#E53E3E	brian	Spyglass	brent
7	Copper Thieves	Black list	Copper Thieves blacklist	#F77902	admin, vaxtor-asia	Vaxtor Asia	vaxtor-asia
6	Lista blanca de Santo Tomas	White list	Lista blanca Santo Tomas	#000000		Kai_Test	jigarcia
74	Vaxtor Spain	Black list	Vaxtor Spain Test List	#000000	rafa	Vaxtor Spain	rafa
79	Eikona - Blacklist	Black list	Blacklist	#E13737		Eikona - India	

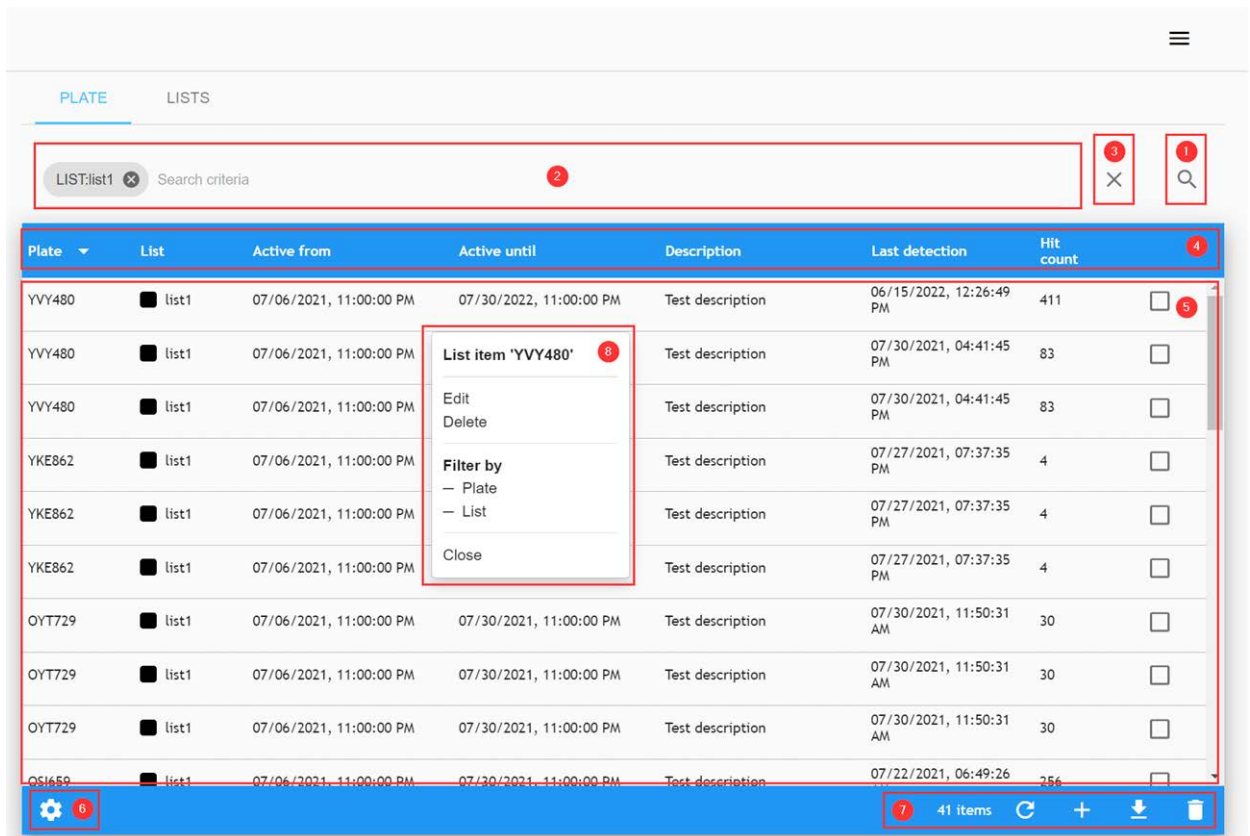

To access the features associated with each list item, you can use the contextual menu by clicking the mouse over each list item.

The contextual menu has two areas:

- The actions area ① which includes item actions such as Edit, Delete etc.
- The filter area ② which includes a comprehensive list of specific filters.

Example of the List Management secondary menu:

NOTE! Search options are available for PLATES, LIST/Plates and SETTINGS/Audit.

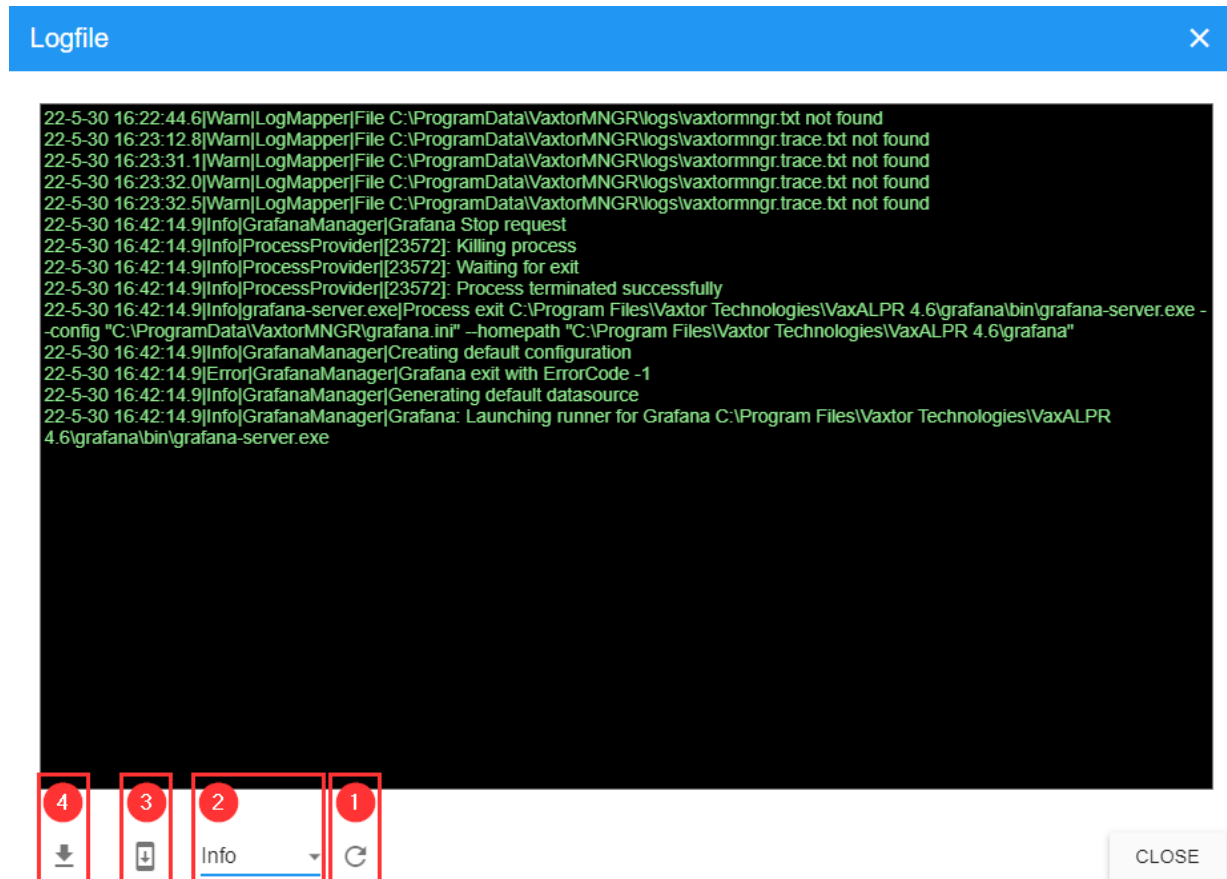

Description:

- Search button ① .
This button opens the Search dialogue box.
- Search Filters area ②
This search area allows you to quickly add search criteria. It includes a Clear search options button ③ .
- Table header ④ .
- Table data area ⑤ .
- List view configuration button ⑥ .
(see [How to customize screens for each user](#), p. 36)
- List tools area ⑦ . This could include:
 - An items counter **4 items** ,
 - Reload button **↻** ,
 - Add item **+** button
 - Download button **↓**

- Contextual Menu ⑧

Show Logfile Option

Users with administration rights, can review the MOBOTIX SYNC log file. To do this, click the LOGFILE menu option in the menu (see ③ in the [Main Menu, p. 31](#)).

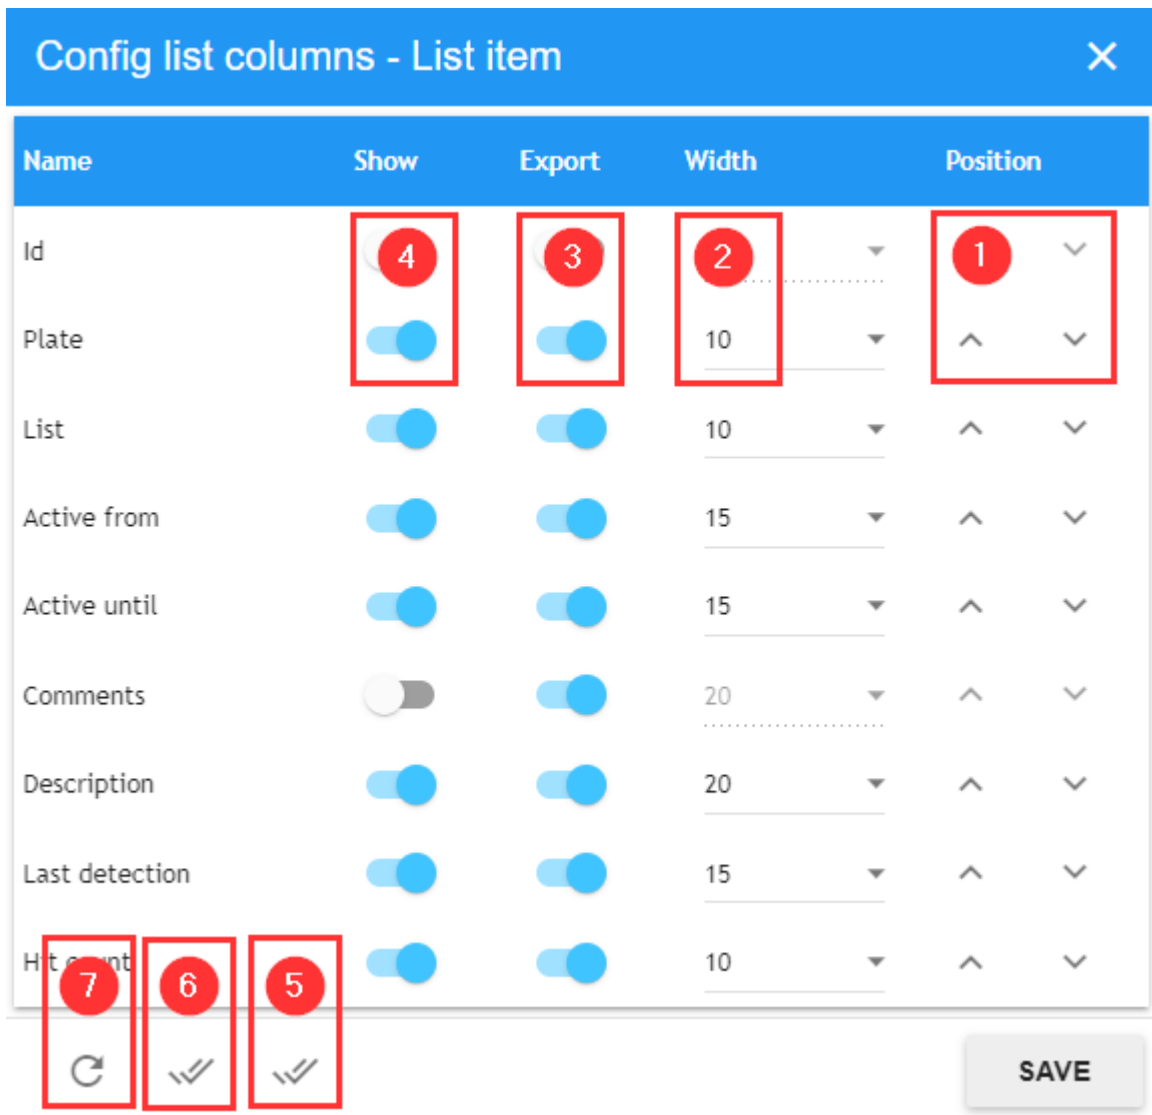

Description:

- Reload the latest log file ①
- Select file type ② . This depends on what you have configured (see [Configuration of Server, p. 110](#)).
- Scroll to the end of the file ③
- Download the log file ④

How to customize screens for each user

The SYNC GUI can be configured to show only the data that each user wants to see.

To do this, in most tables you will see a settings icon  at the bottom left of the screen which allows you to configure the fields that you want to display. Click on the icon and a pop-up window will appear as shown below. In this example the Plate Lists/Plate column configuration is shown:

Description:

- Shows each item in the list display ④ ,
- Includes item in the export file ③
This column will be included only in tables with the export file option.
- Set column width ② ,

- Set column position ① ,
- Reload default configuration ⑦ ,
- Select all columns ⑥ ,
- Select all columns for Export ⑤ ,

The user can simply enable or disable any of the fields as required by using the sliders. These can be used for the PC web environment or when being accessed from tablet or mobile devices.

You can adjust the width of each column and modify its position on the grid.

At the bottom of the pop-up window you can restore the default values by clicking on the Default config ⑦ button or save your new configuration by pressing the Save button.

Plates Table

Click **PLATES** to display a list of license plates recently received.

Capture date	Plate	Image	Status	Camera	Country	Direction	Speed
16/06/2022, 09:29:38	ZNZ6434		Allowed	GreeceParking	GRC	Getting closer	-1
16/06/2022, 09:29:31	IPX6745		Allowed	GreeceParking	GRC	Getting closer	-1
16/06/2022, 09:29:23	PEN2456		Allowed	GreeceParking	GRC	Getting closer	-1
16/06/2022, 09:28:49	ITI7188		Allowed	GreeceParking	GRC	Getting closer	-1
16/06/2022, 09:28:42	PEN1008		Allowed	GreeceParking	GRC	Getting closer	-1
16/06/2022, 09:28:36	HKT5031		Allowed	GreeceParking	GRC	Getting closer	-1
16/06/2022, 09:28:13	HPH8681		Allowed	GreeceParking	GRC	Getting closer	-1
2022, 09:27:49	PEH3930		Allowed	GreeceParking	GRC	Unknown	-1

NOTE! Any new plates received will NOT be displayed until you press the Play icon (9), bottom right (See [Real-Time View](#), p. 49).

This is where plate reads from remote VaxALPR recognition systems appear showing the following default fields:

- **Capture:** Date and time that the plate was captured.
- **Plate:** The ASCII interpretation of the license plate.
- **Image:** The image of the license plate. (The 'Plate Patch')
- **Status:** This indicates whether the vehicle is "Authorized", "Pending", "Confirmed" or "Canceled". (These states are discussed later in the manual.)
- **Camera:** The name of the camera that detected the license plate.
- **Country:** Indicates the country of origin of the recognized plate (if known).
- **Direction:** Indicates the direction the vehicle was traveling. This can be: **Getting closer**, **Getting farther**", **Unknown** or **Stopped**.

- **Speed:** This field displays the instant speed or the average speed of the detected vehicle if available. If both measurements are available, the **instant speed** will be used (if known and configured).
- ... and various other configurable options such as OCR processing time, Multiplate rate etc.

Licence Plate Details

If you click on any of the plates in the list, the small associated [Contextual menu, p. 33](#) will appear. If you then click the action Edit of the context menu (see ④ of the [Plates Table, p. 38](#)), the following pop-up window will appear with the associated meta-data of the reading including the source image and a small zoom tool to view the image in more detail.

Plates ×

Plate Images Tab

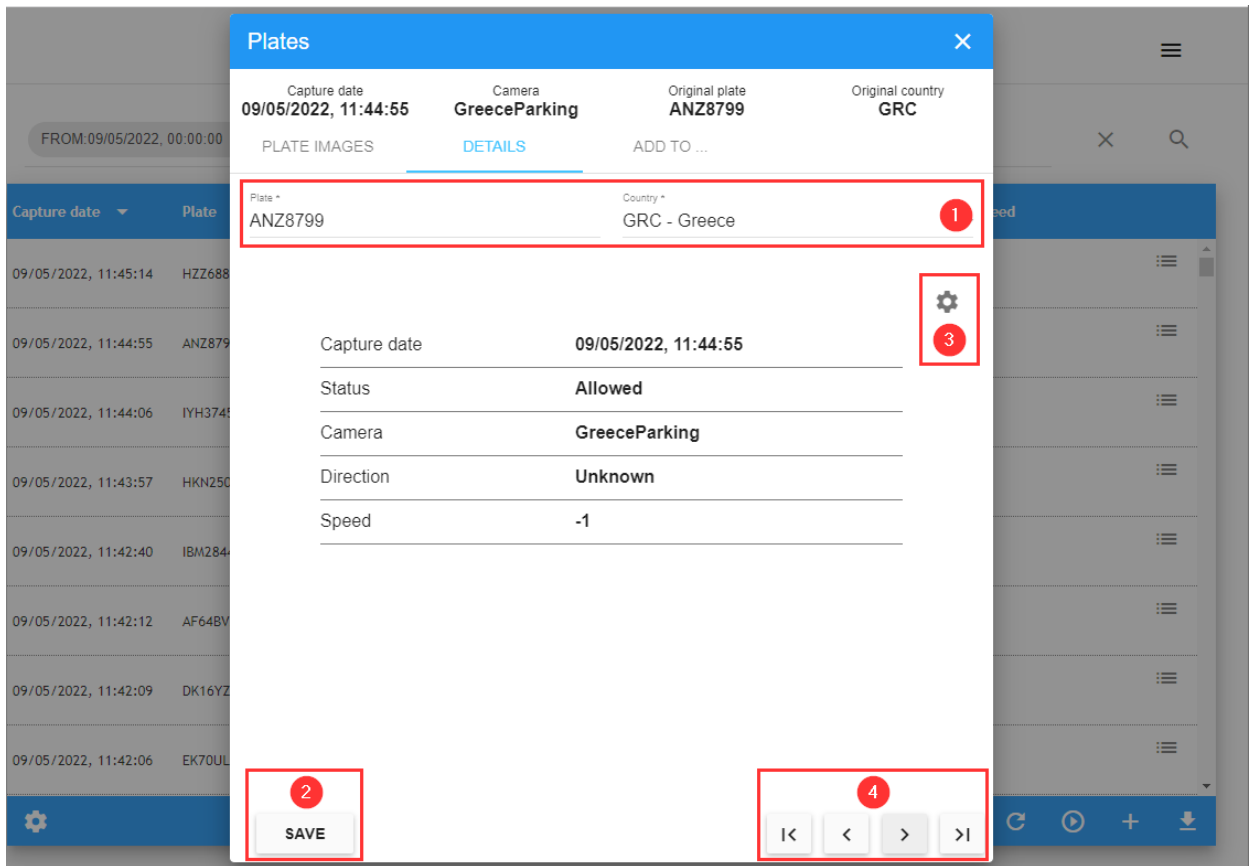

PLATE IMAGES allows you to view the different images provided by the cameras. (Some ALPR cameras can send both an ALPR image AND an environment/contextual image to MOBOTIX SYNC). These can be downloaded and locked to prevent them from being deleted by SYNC housekeeping tasks.

Description:

- Select the Main ALPR camera ① ,
- Select the Environment camera if present ② ,
- Download images ③ ,
- Lock current image ④ .
- To use the zoom ⑤ tool simply move the cursor over the image and the image will automatically zoom in on the area you are focusing on.

Details Tab

In the DETAILS tab you can make changes or correct the fields Plate and Original Country ① . Click the Save button ② to store the change.

Click the configuration button ③ to configure what fields to show.

In the lower right area of the pop-up there are navigation buttons ④ to move through the different records without leaving the pop-up window.

'Add to' Tab

In the tab ADD TO... you can:

- Associated the plate with a Owner (see Authorization section):

The screenshot shows the 'Plates' interface with the following details:

Capture date	Camera	Original plate	Original country

NOTE! To fast access to the Add to... click the action Add to in the context menu (see ⑤ of the [Plates table](#)).

Search Plates

In the upper right corner of the table there is a small magnifying glass icon (see ① of [Plate table](#)).

When clicked, a popup window appears where you can define search criteria by selecting from various search filters.

The Search criteria window is divided into four sections:

- DETAILS
- ALARMS
- LOCATION
- INFO

DETAILS Search Tab

Search criteria	Description
Plate	<p>Here you can search through all the plates using the wildcards "*" and "?" to refine the search (you can also use "_" instead of "?" and "%" instead of "*"):</p> <ul style="list-style-type: none">■ "*" replaces any number of characters (including no characters).■ "?" replaces a single character in the search
Country	<p>Filter the results by the country of origin of the plate selected from a combo box from the configured countries.</p>
Date from	<p>In this field, you can search from any date simply by clicking in the field. A pop-up window appears where you can select the start date + time of the search.</p>
Date to	<p>As in the previous field, you can search for plates up to a specific date again by clicking in the field. The pop-up window appears where you can select the To date + time and then press [OK]</p>
Capture Type	<p>Filter the results by a specific Capturer type</p>
Camera ID	<p>Filter the results by a specific Camera ID.</p>

Search criteria	Description
Camera	Filter the results by a particular camera selected from a combo box from the configured cameras for the current user.
Zone	Filter the results by zone from a combo box from the configured zones for the current user. NOTE: Cameras can be allocated to a zone – e.g. a car park with several entrances so a search would produce a list of vehicles currently in that zone.
Status	Filter the results by the selected vehicle status from a combo box including: OK, Pending, Confirmed, Cancelled, Exported, Prescribed, NoAuth, SanctionPending, NoAuthExceed, Ignored
Direction	Filter the results by the selected vehicle direction from a combo box including Unknown, GettingCloser, GettingFarther, Stopped
Speed	Available as an add-on. Only vehicles moving faster than the selected speed will be shown.
Signal ID	Filter the results by a specific Signal ID.

ALARMS Search Tab

Search criteria	Description
Filter by alarm	Filter the results if plates have triggered an alarm, not triggered an alarm or Both
Exit filter	Filter the result if Vehicle has exited, not exited, or Both

LOCATION Search Tab

Search criteria	Description
Minimum latitude	Filter the results if the capture latitude is great or equal than the value
Maximum latitude	Filter the results if the capture latitude is less or equal than the value
Minimum longitude	Filter the results if the capture longitude is great or equal than the value
Maximum longitude	Filter the results if the capture longitude is less or equal than the value

INFO Search Tab

Search criteria	Description
Make *	Filter the results by vehicle Make
Model *	Filter the results by vehicle Model
Colour *	Filter the results by vehicle Colour
Category	Filter the results by the specified vehicle Category
Classification	Filter the results by the specified vehicle Classification
Region	Filter the results by the specified Camera ROI

(*) These are only available with the optional MMC add-on which attempts to analyze images and report the Make, Model & Colour.

Filter Plates

The SYNC PLATES page includes a quick way to use filters by adding your own search criteria as a text string (area ② of the [Lists Table, p. 56](#)) into the search filter bar. You can add or remove search filters, also you can use the Filter by option in the context menu (see ③ of the [Lists Table, p. 56](#)).

The search filter syntax is: Token:FilterValue, where:

Token	filterKey	filterValue
CAMERA	camera	Camera ID or camera name
COUNTRY	country	Three letter Country code

Plates Table

Token	filterKey	filterValue
DIRECTION DIR	direction	Unknown, GettingCloser, GettingFarther, Stopped
PLATE	plate	p.e. M4616WZ
STATUS	status	OK, Pending, Confirmed, Cancelled, Exported, Prescribed, NoAuth, SanctionPending, NoAuthExceed, Ignored
ZONE	zone	Zone ID or Zone name
CAPTURERID CAPID	capturerId	Capturer ID
CAPTURERTYPE CAPTYPE	capturerType	Capturer Type
ALARM	alarm	true or false
MAXLATITUDE MAXLAT	maxlatitude	Max latitude (double)
MINLATITUDE MINLAT	minlatitude	Min latitude (double)
MAXLONGITUDE MAXLON	maxlongitude	Max longitude (double)
MINLONGITUDE MINLON	minlongitude	Min longitude (double)
DATEFROM FROM	dateFrom	DateTime format dd/MM/yyyy hh:mm:ss , example: 08/01/2018 10:22:29
DATETO TO	dateTo	DateTime format dd/MM/yyyy hh:mm:ss , example: 08/01/2018 10:22:29
SPEED	speed	Speed (integer)
SIGNALID	signalId	Signal ID (integer)
VEHICLEMAKER	vehicleMaker	Vehicle marker (text)
VEHICLEMODEL	vehicleModel	Vehicle model (text)
VEHICLECOLOR	vehicleColor	Vehicle colour (text)
VEHICLECLASS	vehicleClass	Vehicle class
CATEGORY	category	Category

Token	filterKey	filterValue
REGION	region	Region
ALARM	alarm	If it is an alarm (boolean)
EXIT	exit	If it is an exit (boolean)

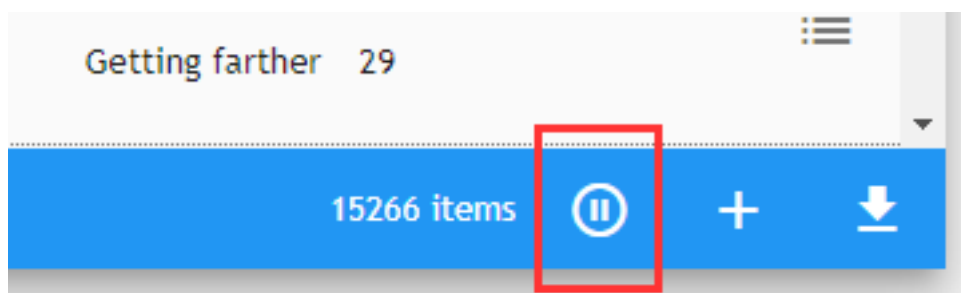

NOTE! To clear the search criteria use button [X] located at the right of the Filter bar.

Real-Time View

Click the Play button (button ⑨ of [Plates Table, p. 38](#)) to see plate reads as they arrive in real time.

When this option is enabled all the plate reads received from the ALPR readers will be displayed immediately in the main screen with the most recent at the top.

If you want to stop the real time view, you must click the pause button that replaced the play button. This can be useful if you want to search or examine plates received without them scrolling as new plates arrive..

NOTE! This only works if the current user has been authorized.

Do this by selecting CONFIGURATION then select the ZONES main Tab. Click on the appropriate zone and select which users receive real time events for this zone. Do this by selecting the appropriate user from the users list and double click on the user name to move it across to the right-hand box (assigned users). This user now can see the view with real-time information. Alternatively, single click and use the arrow icons in the center.

NOTE! The reason this is not set as a default is there may be a massive amount of information being received from many readers which would overload the system.

Download Plates

To download a Plate list, click the download button (button ⑦ of [Plates Table, p. 38](#)) at the bottom-right of the plate list page:

Before downloading consider:

- The columns to include into the.csv file. Using the columns configurator (button ⑧ of [Plates Table, p. 38](#)) you can select which columns to be included (for additional details, see [How to customize screens for each user, p. 36](#)).
- The number of plates in your current search (area ⑩ of [Plates Table](#)), in this example nearly 15,300. Keep this to a reasonable number by using more Search Filters to avoid a massive download that could lock your system up.

Two files are downloaded: a.csv file containing a list of plates from the search results and a corresponding.zip file containing all of the images of the vehicles. The files appear at the bottom of the screen and are downloaded to your Windows download directory.

The Downloaded file is a CSV format file (with ";" as a separator). It includes a header and selected columns from this list:

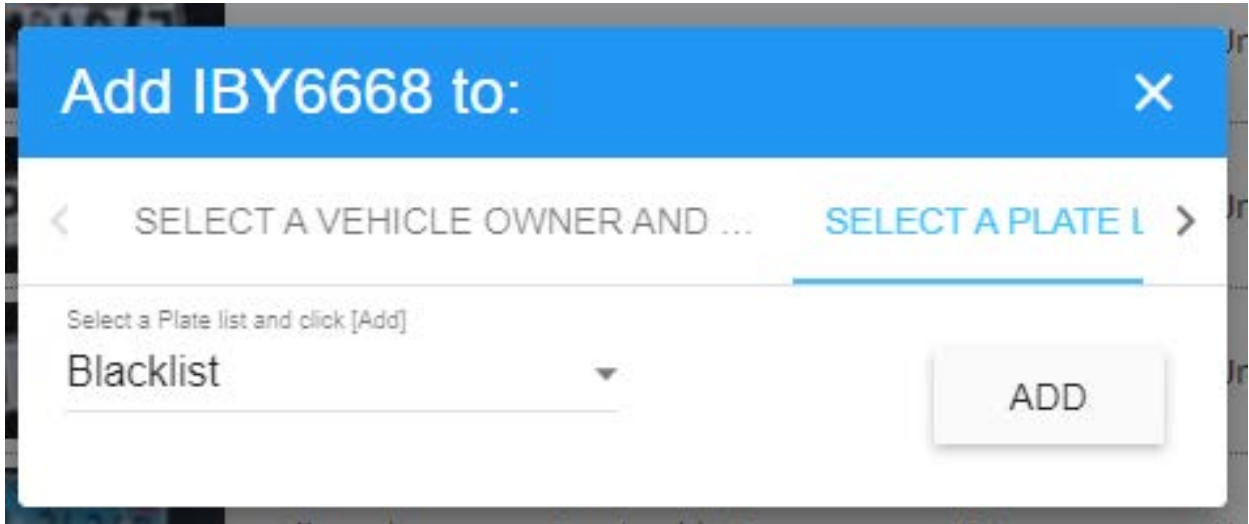

Field	Type	Example
id	Integer	1
cameraId	Integer	1
zoneId	Integer	1
cameraName	String	Camera #1
latitude	Float	12.1234
longitude	Float	12.1234
plateNumber	String	M4616WZ
originalPlateNumber	String	M4616WZ
country	String	ESP
originalCountry	String	ESP
takenOn	DateTime as String	2017-12-19T11:38:33.12Z
status	Status	OK, Pending, Confirmed, Canceled, Exported, Prescribed, NoAuth, SanctionPending, NoAuthExceed, Ignored

Field	Type	Example
direction	VehicleDirection	Unknown, GettingCloser, GettingFarther, Stopped
speed	Integer	0
confidence	Integer	89
envlImageIds	List of Integer	[12300, 12302, 12303]
ocrImageId	Integer	12301
signaled	Boolean	false
avgDigitsHeight	Integer	16
multiplateRate	Integer	2
processingTimeOCR	Float	72.817330121994019
captureId	Integer	1
captureType	String	
isAlarm	Boolean	false
kamikazeAlarm	Boolean	false
timeInZoneAlarm	Boolean	false
blacklistAlarm	Boolean	true
alarmListIds	List of Integer	[20, 21]
speedAlarm	Boolean	false
prowlingAlarm	Boolean	false
vehicleMaker	String	BMW
vehicleModel	String	M5
vehicleColor	String	UNKNOWN
crosstime	Float	0
hasExit	Boolean	false
signalId	String	1
authorized	Boolean	false
category	String	
vehicleClass	String	
region	String	

Add a Plate to a List

If you are working with Lists, you can associate the current Plate to a List (see [LISTS: Black and White Lists, p. 56](#)), simply click on the action Add to of the context menu (see ⑤ of [Plate Table, p. 64](#)).

Then, the following popup window will appear:

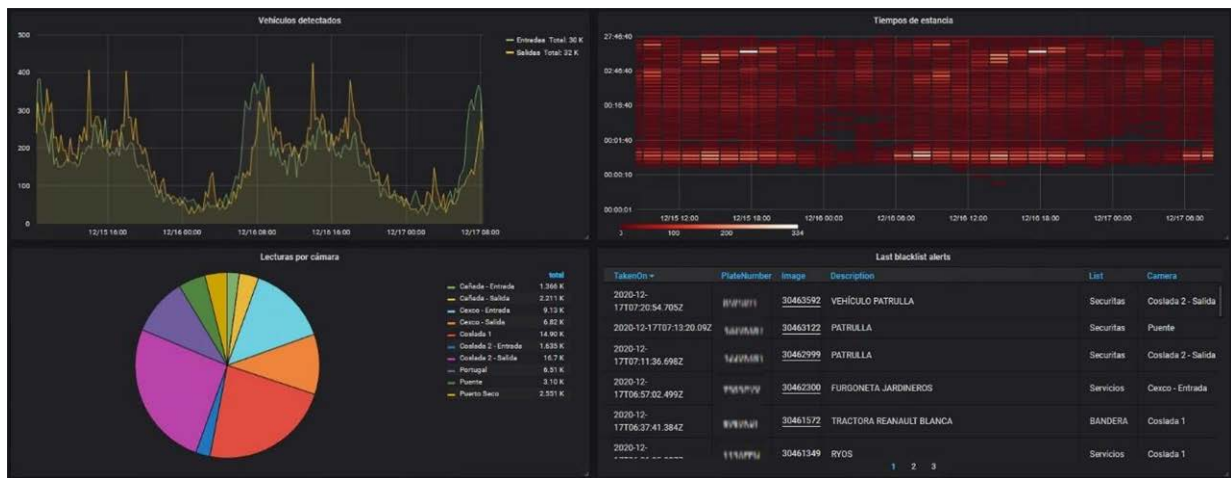

For additional information, see [‘Add to’ Tab, p. 42](#).

DASHBOARD: Grafana Plugin

MOBOTIX SYNC fully integrates Grafana Dashboards, an open-source analytics and monitoring solution for databases. The Dashboard allows you to query and visualize the metrics of your applications and also, depending on your requirements, issue messages to a selection of pre-defined messenger services as a post-process.

It works with the data stored within MOBOTIX SYNC to provide tailored reports like traffic volume, area capacities and many more incorporating map views in case the data set was accompanied by GPS data.

MOBOTIX offers you the possibility to design dashboards according to your individual requirements and make them available to you through its Professional Service. For further information contact your local MOBOTIX contact or visit the MOBOTIX homepage (www.mobotix.com).

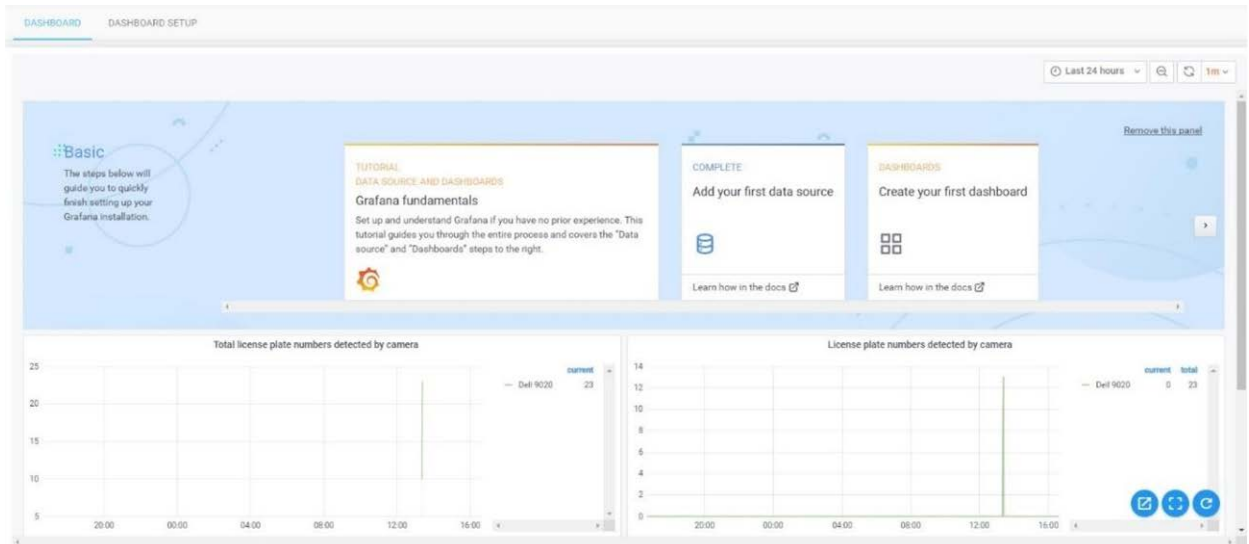

After switching to the Dashboard view, you will see a default dashboard.

Furthermore, we refer to helpful tutorials and application help for the successful design of your own dashboards.

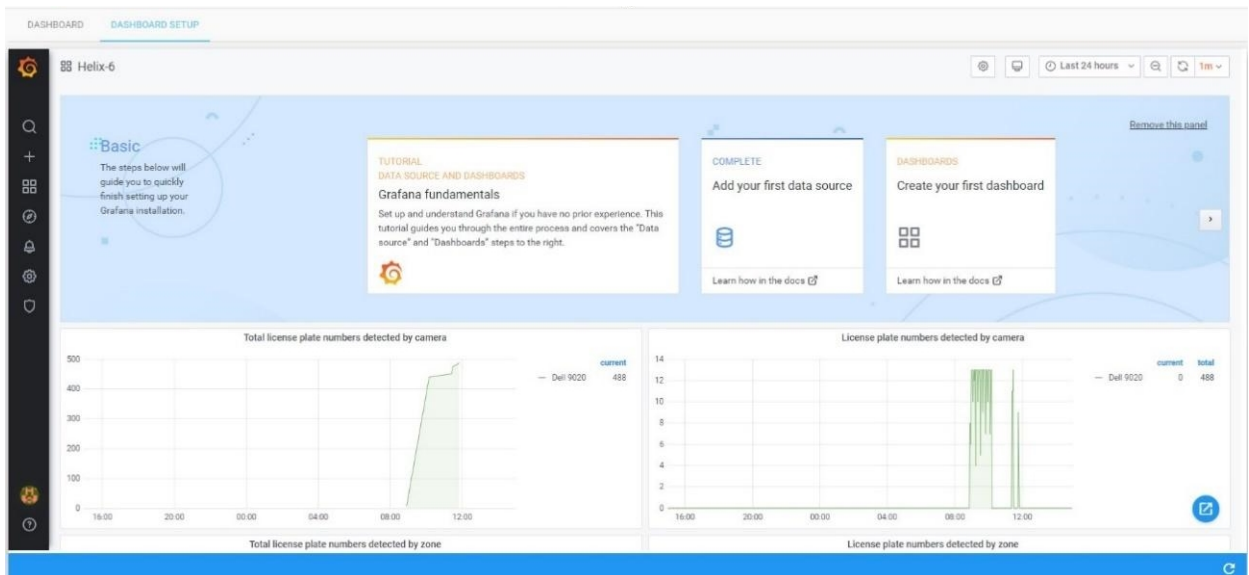

These are external contents, which are provided by Grafana free of charge and are continuously extended and maintained.

Selecting DASHBOARD causes the main menu to be displayed:

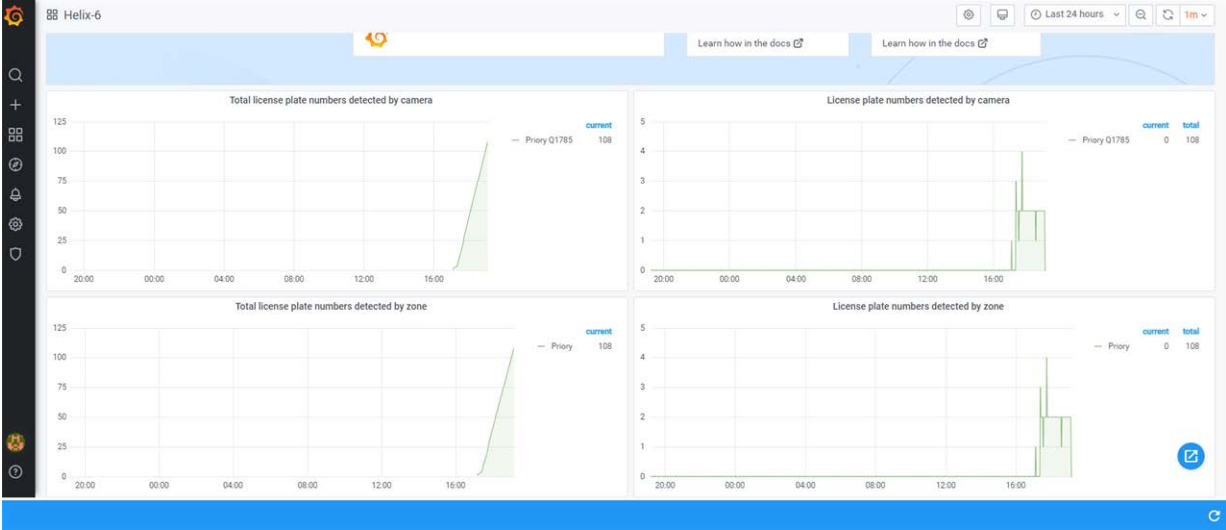

DASHBOARD: Grafana Plugin

Click on **DASHBOARD SETUP** to start connecting your data.

A default dashboard will be loaded with four simple graphs from your connected ALPR cameras.

Click on the [+] in the left hand column to create a new folder if required, to save your dashboards into.

Next create a dashboard and add a new panel. The new blank panel will appear:

LISTS: Black and White Lists

Selecting LISTS from the Main dropdown Menu allows the user to create multiple whitelists or blacklists. Vehicles (plates) that appear on a whitelist are always authorized to enter an associated zone and can trigger an Actuator (relay). Vehicles on a blacklist will create an alarm in the system if the plate is detected in an associated zone. When a zone is a parent of another zone, the lists are always inherited.

Note that when setting up Actuator Links (see later), you can select the Event Type which includes Authorized and Blacklist. A vehicle in a Blacklist can therefore trigger a relay (e.g. to sound an audible alarm). A Whitelist plate is always authorized and so you should select **Authorized** to trigger the actuator in this case.

Lists Table

This area shows all lists created. You can add, edit or delete any of them.

Id	Name	Type	Description	Color	Users	Zone	Owner
6	Lista blanca de Santo Tomas	White list	Lista blanca Santo Tomas	#000000		Kai_Test	jgarcia
69	OvationTest	Black list		#FF0000	fb4, ovation	Kai_Test	
2	Blacklist	Blacklist		#F70202	admin, dan, demo, mobotix	Kai_Test	demo
12	TestListKai	Blacklist		#1EF12C	jason	Kai_Test	
21	Test Actuator List Kai	Whitelist	Park 1	#33DD27	kaicamera65	Kai_Test	

In the main window of this menu you can see the name of the list, the type of list, description, a color marker code of the list, the user and zone associated with it and also the owner.

There are toolbar icons to import the list from a file, to renew the from-to dates of the list and finally an icon to delete the list (see below for more details).

Note that the Columns displayed can be configured by pressing the Settings icon (bottom left).

Search Filters

SYNC includes a fast way to search a List by adding search criteria as a text string (see ⑥ of the [Lists Table, p. 56](#)). To enable this, a Filter to the Results can be added or removed. You can also use the Filter by option in the context menu (see ⑦ of the [Lists Table, p. 56](#)). Search filter syntax is:

Token:FilterValue, where:

Token	filterKey	filterValue
ID	id	List ID
NAME	name	List name
TYPE	type	blacklist whitelist
DESCRIPTION DESC	description	Description
ZONE	zone	Zone ID or list name

NOTE!

To clear the search criteria use button [X] located at right of the filter bar.

The ZONE filter must include an exact value (ID or list name) because it is a relation, not a List attribute.

Add a new list

At the bottom right of the screen there is a [+] button (see ① of [Lists Table, p. 56](#)) to add a new list to the system.

This opens a pop-up window with various options listed below:

The screenshot shows a 'Plate list' configuration window with the following fields and controls:

- 1 Name *
- 2 Description *
- 3 Zone *
- 4 Is Virtual (toggle switch)
- 5 Type *
- 6 Color (black)
- 7 Users (Available/Assigned list)
- 8 Owner (dropdown)

Available users list:

- adaking
- admin
- admin_user
- adt-poc
- adtel
- agdcamera
- agustin
- ahack

Assigned users list: (empty)

SAVE button

Description:

- **Name** ① : Insert a name for the list.
- **Description** ② : Insert a description of the list.
- **Zone** ③ : Insert the zone associated with the list.
- **Is Virtual** ③ : This kind of list will just be stored in memory, not into the database. If the application is stopped, this list will be removed from memory.
- **Type** ⑤ : Set the list to be a blacklist or whitelist.

- **Color** ⑥ :

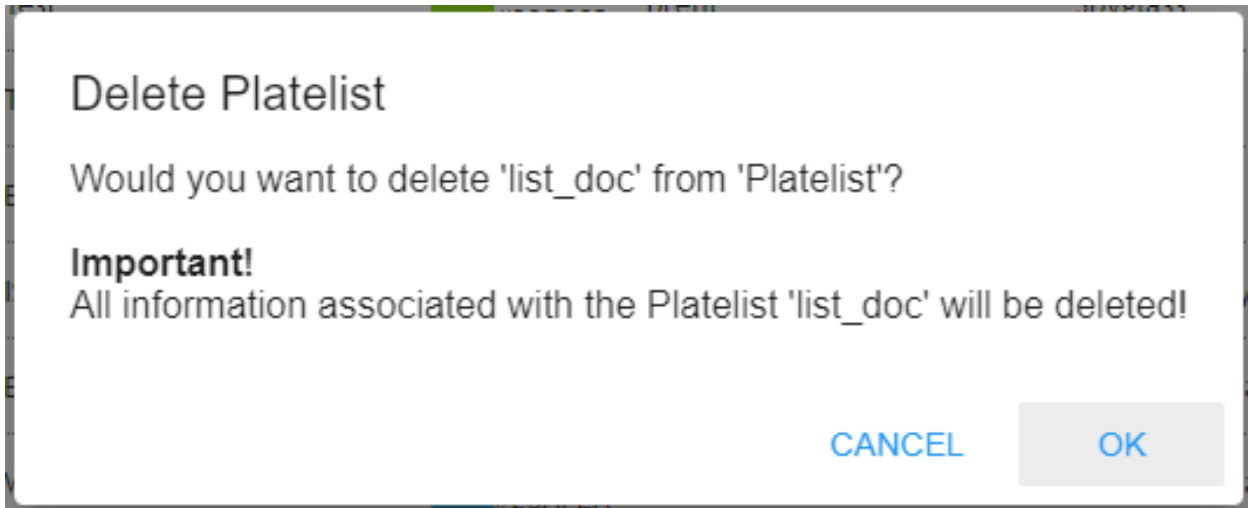

Choose a reference color for the new list. Once clicked, you will see a color palette where you can select a color using the cursor. The field will automatically display the associated RGB hexadecimal color code.

- **Users** ⑦ : Defines the user who will receive events linked to the list.
- **Owner** ⑧ : This field is automatically filled with the user who created the list.

Delete a list

To delete a list, simply click on the action Delete in the contextual menu (see ② of [Lists Table](#), p. 56).

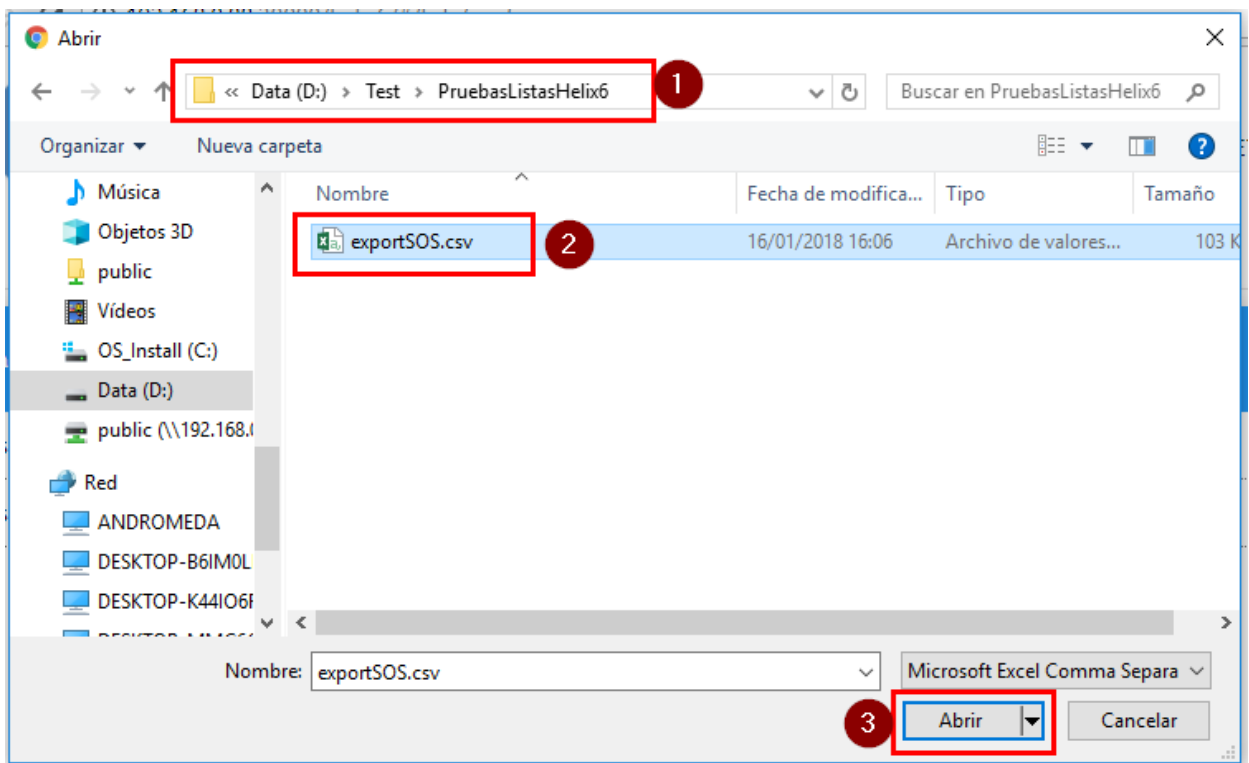

Once this button is pressed, a confirmation window will appear asking you if you want to delete the list.

If you are sure, press the "OK" button and the list will then be deleted, otherwise Cancel.

Import a Plate List from a CSV file

To import a plate list from a CSV file, simply click the action Import in the contextual menu (see ④ of [Lists Table, p. 56](#)). A selection file window is opened:

Description

- Select folder ①
- Select file ②
- Open file ③

Select a folder and file and click Open. File opening times will vary depending on the size of the files.

The screenshot shows the HelixServer - Plate lists interface. The table below represents the data shown in the interface:

Id	Name	Type	Description	Color	Users	Zone	Owner
85	list_doc	Black list	List doc	#F4E801		Vaxtor Spain	
84	Spyglass - test	White list	Test	#83D902	brent	Spyglass	
83	Spyglass - test	Black list	Test	#E57E3E	brian	Spyglass	
82	Wegmans	Black list	Ex-employees	#F17109	admin, steve	Westwood Store	
81	ISOBlackList	Black list	ISOBlacklist	#000000	isosmartcity	ISOSmartCity	
79	Eikona - Blacklist	Black list	Blacklist	#E13737		Eikona - India	
78	Eikona - Whitelist	White list	Whitelist for Eikona PoC	#25AFEA		Eikona - India	
77	SPG Test list	Black list	First test list	#000000	brent	Spyglass	
76	Lista demo Paula	White list	Lista demo Paula	#00D9FF	paula	Parking demo	
74	Vaxtor Spain	Black list	Vaxtor Spain Test List	#000000	rafa	Vaxtor Spain	
71	Lista Blanca	White list	White list of employees	#0077FF	jaime	Omicloud MX	
69	OvationTest	Black list		#FF0000	fb4, kai, ovation	Kai_Test	
34	CG_TESTLIST	White list	TEST PLATE IMPORTANT	#05D9F5	admin	Australia-ISpeed Project Doc	

Finally, a Toast message (one that will automatically disappear) is displayed (at the bottom left corner of the window) showing how many Plates have been imported:

NOTE! You can then review the imported data in the List list items screen (see next section).

The CSV file format is defined as follows:

Field	Type	Example
plate *	String	0933BFF
activefrom *	DateTime as String	2017-01-01T00:00:00.00Z
activeuntil *	DateTime as String	2017-12-31T23:59:59.00Z
Comments *	String	Comments
Description *	String	Description
Hitcount	Integer(\$int32)	5
lastDetection	DateTime as String	2017-12-19T11:38:33.12Z

(*) Required

So, for example, a file might contain the following data:

```
plate;activefrom;activeuntil;comments;description
```

```
ABC123;2019-01-01T00:00:00.00Z;2020-01-01T00:00:00.00Z;Comment 1;description 1
```

```
XYZ234;2019-01-01T00:00:00.00Z;2020-01-01T00:00:00.00Z;Comment 2;description 1
```

```
LAW345;2019-01-01T00:00:00.00Z;2020-01-01T00:00:00.00Z;Comment 3;description 1
```

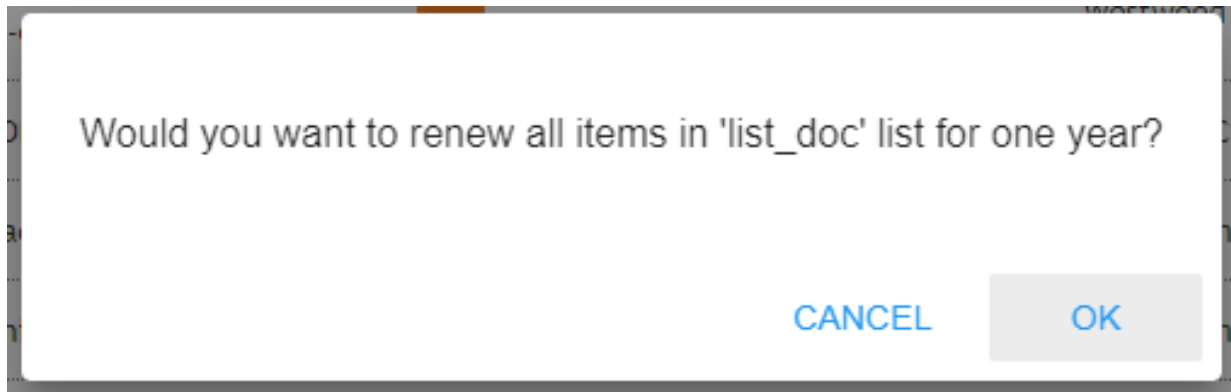

NOTE!

- The CSV file must include a header with column names.
- The CSV file uses a semicolon (;) as a column field separator.
- The CSV header must include plate, activefrom, activeuntil, Comments and Description columns.
- **DateTime fields are UTC time in ISO-8601 format - encapsulated in the String format:** "YYYY-MM-DDTHH:MI:SS.SSZ" with HH in 24h format.

NOTE! Fields hitCount and lastDetection help when exporting or importing lists from different SYNC installations.

Renew the List

To renew the list for one year, click the action Renew for one year in the contextual menu (see ③ of [Lists Table, p. 56](#)). Then, this pop-up windows is opened:

If you are sure, press the [OK] button and the list will then be renewed, otherwise Cancel. Finally, a Toast message is displayed (at the bottom left corner of the window) showing the renewing confirmation:

Edit a List Item

To edit a list, simply click the action Edit in the contextual menu it (see ⑤ of [Plate Table, p. 64](#)), this pop-up window is opened:

Plate Table

In LISTS, PLATES, you can see all of the individual plates and their associated lists that have been setup.

You can see each list’s details, when it was added and its validity period, the vehicle plate, how many times it has been detected in the validity period, the last sighting, the description of the list and also a small trash can icon to delete individual plates.

Search Criteria

In the upper right corner of the table there is a small magnifying glass icon ① . If you click on it a popup window will appear where you can select from the following search criteria:

Description:

- **List type** ① : This option limits the search to the selected list type: Blacklist or Whitelist
- **List** ② : the results by list or multiple lists.
- **Date from** ③ : Shows only the plates detected since the selected date.
- **Date until** ④ : Shows only the plates detected up until the selected date.
- **Plates** ⑤ : The plate number of a specific vehicle. *
- **Description** ⑥ : Filter by the description. *
- **Active** ⑦ : Show only the plates that are active, inactive or both at this moment.
- **Located** ⑧ : Show plates that have been detected at least once, never detected or both.

* Wildcards are allowed.

Search Filter

SYNC includes a fast way to search a List by adding search criteria as a text string (see ② of [Plate Table, p. 64](#)). To enable this, includes a Search Filter where Search Filters can be added or removed, also you can use the Filter by option in the context menu (see ⑨ of [Plate Table, p. 64](#)). The Search filter syntax is: Token:FilterValue, where:

Token	filterKey	filterValue
LISTIDS LIST	listIds	List ID or List name, separated with comma (,)
TYPE	type	blacklist or whitelist
ACTIVE	active	true or false
PLATE	plate	p.e. M4616WZ
LOCATED	located	true or false
DATEFROM FROM	dateFrom	DateTime format dd/MM/yyyy hh:mm:ss , example: 08/01/2018 10:22:29
DATETO TO	dateTo	DateTime format dd/MM/yyyy hh:mm:ss , example: 08/01/2018 10:22:29
DESCRIPTION DESC	description	Description

NOTE! To clear the search criteria use button [X] located at right of the filter bar.

Add a Licence Plate to a List

Click on the [+] symbol located at the bottom right corner of the screen (see ③).

The screenshot shows the 'HelixServer - Plate lists' interface. A 'List item' pop-up form is open, allowing users to add a new plate to a list. The form contains the following fields:

- 1. Plate *
- 2. Description *
- 3. List *
- 4. Active from *
- 5. Active until *
- 6. Comments

A 'SAVE' button is located at the bottom right of the form. The background shows a table of plate records with columns for Plate, List, Active from, Active until, Description, and a numeric value.

Description:

- Plate ①
The licence plate to add to the list.
- Description ②
Add a description in this field.
- List ③
Select a list to add the plate to.
- Active from ④
Starting date of the plate in the list. (validity period)
- Active until ⑤
Finish date of the plate in the list.
- Comments ⑥
Freeform text comment to be associated with the plate.

NOTE! All fields in this pop-up menu marked with an asterisk are required.

To add a record, press the [Save] button. The window will close automatically and the record will be added.

Edit Plate a List Item

To edit a list, simply click on the action Edit of the context menu (see ④ of [Plate Table, p. 64](#)), this pop-up window is opened:

Plate *	Hit count
OSI659	256
Description *	
Test description	
List	
list_doc	
Active from *	Active until *
06/07/2021, 23:00:00	30/07/2021, 23:00:00
Last detection	
22/07/2021, 06:49:26	
Comments	

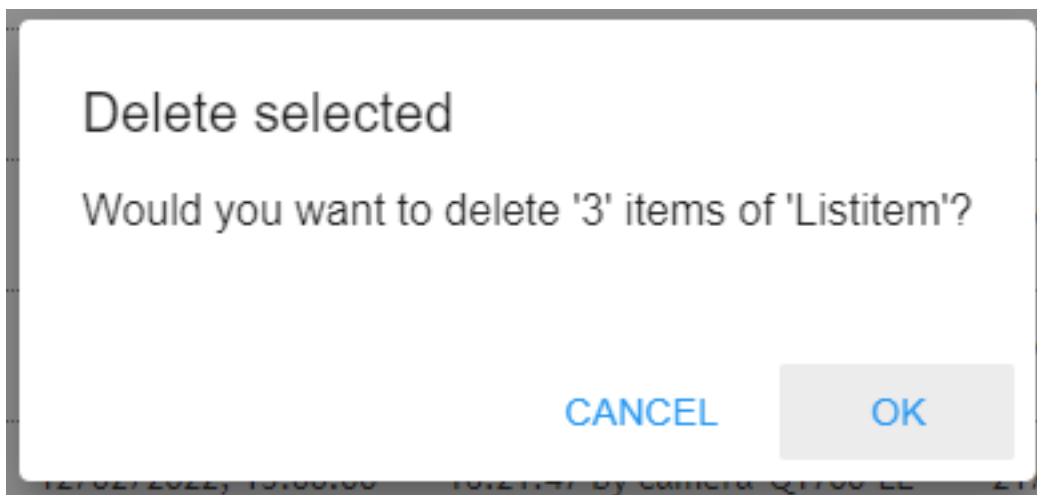

NOTE! For more details see [Add a Licence Plate to a List, p. 67](#).

Delete a Plates Item

To delete Plate list items, the action Delete of the context menu or use the multiple delete option, selecting the associated checkbox (see ⑤ of [Plate Table, p. 64](#)).

Plate	List	Active from	Active until	Description	Last detection	Hit count	
KPG133	list_doc	06/07/2021, 23:00:00	11/05/2023, 11:24:31	Test description	30/07/2021, 10:55:45	38	<input type="checkbox"/>
IKT498	list_doc	07/09/2021, 02:00:00	11/05/2023, 11:24:31	Interesting plate	29/09/2021, 20:30:53	78	<input checked="" type="checkbox"/>
HNF633	list_doc	06/09/2021, 23:00:00	11/05/2023, 11:24:31	auto	07/09/2021, 12:06:09	1	<input checked="" type="checkbox"/>
GZX505	list_doc	06/07/2021, 23:00:00	11/05/2023, 11:24:31	Test description	30/07/2021, 16:27:45	65	<input checked="" type="checkbox"/>
GKI924	list_doc	06/07/2021, 23:00:00	11/05/2023, 11:24:31	Test description	24/07/2021, 01:04:07	7	<input type="checkbox"/>

Once the checkbox or checkboxes are selected, press the delete button ⑤ of [Plate Table, p. 64](#) and a confirmation window will appear asking you if you want to delete the list items.

If you are sure, press the [OK] button and the list will then be deleted, otherwise Cancel.

Finally, a Toast message is displayed (at bottom left corner of the window) showing the deleting confirmation:

Export all Plates in Lists

To export all of the plates, first choose which fields are to be exported by pressing the Settings icon ⑩ of [Plate Table, p. 64](#)). You will see a list of available fields and as we have already seen, we can select which should be displayed on the screen, – but we can also use the ‘Export’ slider to add them to the.csv output file.

✕
Config list columns - List item

SAVE

Select the CSV File Download icon (see ③ of [Plate Table](#), p. 64) to start the export.

NOTE! For more details about available columns to download, see section [Export all Plates in Lists](#), p. 70.

The exporter tool will use the active search filters, in order to download just the required list items. The exported file, named `exportListitem.csv`, will be saved to the standard Download folder – and is shown at the bottom of your screen.

Opening as flat text shows the file:

ACTUATORS

An actuator, otherwise known as a relay, is normally an opto-isolated device used for triggering external devices such as car park barriers or traffic lights.

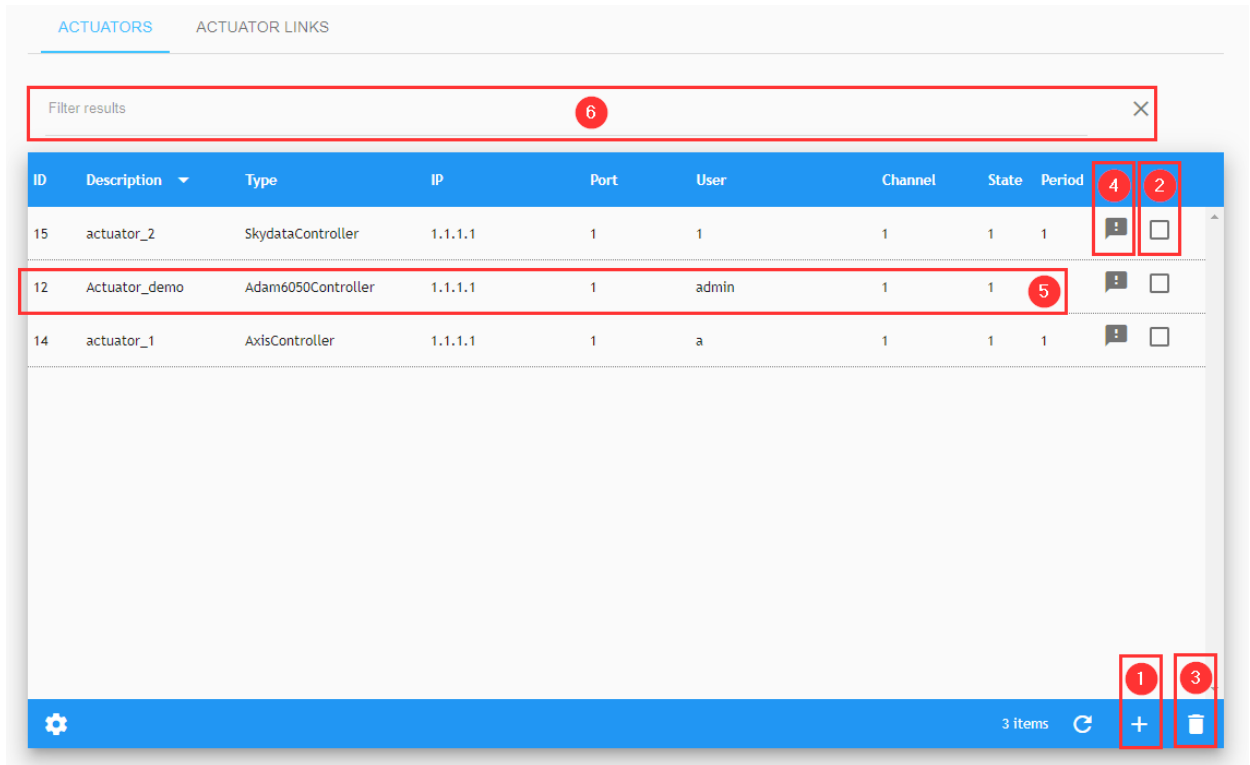

MOBOTIX MOBOTIX SYNC can be configured to trigger an actuator on various conditions such as a plate being in a Blacklist, – or a plate being authorized (see later).

NOTE! When setting up Actuator Links (see later) you can select the Event Type which includes Authorised and Blacklist. A vehicle in a Blacklist can therefore trigger a relay. A Whitelist plate is always authorized and so you should select **Authorised** to trigger the actuator in this case.

Various standard devices are supported but the most common is the ADAM 6000 series from Advantech. The 6266 model for example is IP controlled and has four separate output channels meaning that four devices can be controlled from each unit. The advantage of an IP relay device is that it can be sited remotely from SYNC. It could even be in a different City and a centralized SYNC Back Office is then able to remotely open barriers.

NOTE! If the device is not on the same local network then a fixed IP should be used to remotely address it.

ACTUATORS Table

Before attempting to add an actuator to the system, check by using the relay manufacturer’s software that it is connected and functioning correctly.

Filter Actuators

The Filter result area (see ④ of the [Filter Actuators, p. 74](#)) allows you to filter the current listed Actuators. To enable this, a Filter to the Results can be added or removed. In addition you can use the Filter by option in the context menu (see ⑧ of the [Filter Actuators, p. 74](#)). The filter syntax is:

Token:FilterValue where:

Token	filterKey	filterValue
ID	id	List ID
DESC	description	Actuator description
DESCRIPTION		
TYPE	type	Based on/actuator/validtypes

Add a new Actuator

Click Edit ① of the context menu of the [Add a new Actuator, p. 75](#), to add a new actuator. A window will appear where you can set up the device.

The screenshot shows a configuration window titled "Actuator" with a blue header and a close button (X) in the top right corner. The form contains the following fields, each with a red circled number indicating its order:

- 1: Description *
- 2: Type * (dropdown menu)
- 3: IP *
- 4: Port *
- 5: User *
- 6: Password * (with a red warning icon)
- 7: State *
- 8: Period *
- 9: Channel *

A "SAVE" button is located at the bottom right of the form.

Description:

- Enter a descriptive name ① for the device being controlled
- Select the type of device ② from the dropdown list of supported actuators.
- IP address ③
- Port number ④
- Username ⑤ *
- Password ⑥ *
- State ⑦ : 0 or 1, this is what you want the device to be switched to
- Period ⑧ : in Milliseconds is the relay latch time. (the time that the relay is closed for). In the case of the Adam relay you can set this time directly by accessing the relay via its IP address or utility software. Most barriers operate on a minimum pulse time of 200ms

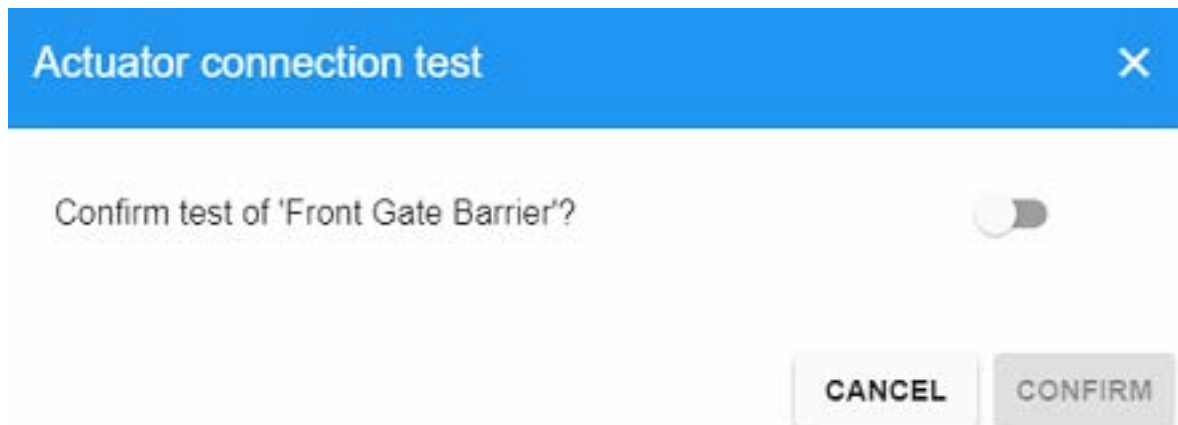

- Channel ⑧ : is the relay number within the device. In the case of the 6266 it can be set from 1 to 4 to trigger each relay within the device.

NOTE! (*) Username and Password to access the device. The default Adam password is: 00000000

Test an Actuator

Once added you can test the relay by clicking Actuator connection text ⑥ of the context menu of the [ACTUATORS Table, p. 74](#).

A window appears asking you to confirm the test. Use the slider and then click CONFIRM. A success or failure message is then displayed.

Edit an Actuator

To edit an Actuator, simply click Edit ⑤ of the context menu of [Edit an Actuator, p. 76](#), this pop-up window is opened:

Actuator
✕

Description * <input style="width: 95%;" type="text" value="1234ABC"/>	Type * <input style="width: 95%;" type="text" value="Adam6052Controller"/>
IP * <input style="width: 95%;" type="text" value="192.168.0.49"/>	Port * <input style="width: 95%;" type="text" value="80"/>
User * <input style="width: 95%;" type="text" value="admin"/>	Password <input style="width: 95%;" type="password" value="..."/> ✓
State * <input style="width: 95%;" type="text" value="1"/>	Period * <input style="width: 95%;" type="text" value="1"/>
Channel * <input style="width: 95%;" type="text" value="1"/>	

SAVE

For more details see [Add a new Actuator, p. 75](#).

Delete an Actuator

To delete an Actuator, click Delete ⑦ of the context menu of the [ACTUATORS Table, p. 74](#)

Alternatively use the multiple delete selecting the actuator to delete, a confirmation window will appear asking you if you want to delete the actuator:

ID	Description	Type	IP	Port	User	Channel	State	Period	
15	actuator_2	SkydataController	1.1.1.1	1	1	1	1	1	⋮ <input checked="" type="checkbox"/>
12	Actuator_demo	Adam6050Controller	1.1.1.1	1	admin	1	1	1	⋮ <input type="checkbox"/>
14	actuator_1	AxisController	1.1.1.1	1	a	1	1	1	⋮ <input checked="" type="checkbox"/>

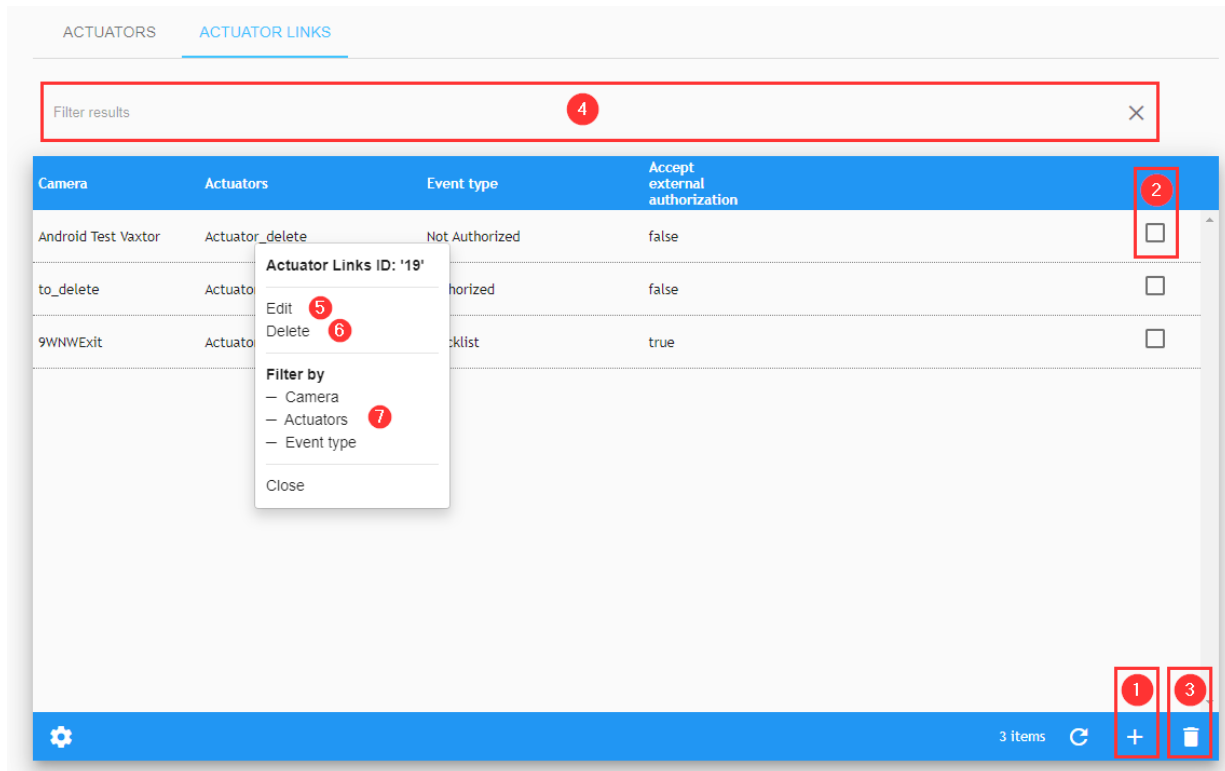

And click the ③ button of the [ACTUATORS Table, p. 74](#). Then a confirmation window is opened:

If you are sure, press the [OK] button and the Actuator will then be deleted, otherwise Cancel. Finally, a Toast message is displayed (at bottom left corner of the window) showing the deleting confirmation:

ACTUATOR LINKS tab

Filter Actuator links

The Filter result area (see ④ of the [ACTUATOR LINKS tab](#), p. 79) allows users to filter current listed Actuator links. To enable this, a Filter to the Results can be added or removed, also you can use the Filter by option in the context menu (see ⑦ of the [ACTUATORS Table](#), p. 74). The filter syntax is:

Token:FilterValue where:

Token	filterKey	filterValue
ID	id	Actuator link id
CAMERA	camera	Camera id or Camera name
ACTUATOR	actuator	Actuator id or Actuator name
EVENT EVENTTYPE	eventtype	Event type

Add a new Actuator link

Click on the plus icon (see ① of the [ACTUATOR LINKS](#) tab, p. 79), to add a new actuator link. A window will appear where you can set up the device.

The screenshot shows a configuration window titled "Actuator Links". It contains four main fields: "Camera *" (marked with 1), "Actuators *" (marked with 2), "Event type *" (marked with 3), and a toggle switch for "Accept external authorization" (marked with 4). A "SAVE" button is positioned at the bottom right of the window.

Description

- Camera ① : select from the configured Cameras (see [CAMERAS](#) Tab, p. 88)
- Actuator ② : select from the configured Actuators (see [ACTUATORS](#), p. 73)
- Event type ③ *
- Accept an external authorization ④

(*) Event type could be:

- Authorized
- Blacklist
- Not Authorized +
- Not Authorized - Capacity Exceed +
- Capacity is full +
- Capacity not full +

(+) if Access Control is licensed)

Edit an Actuator link

To edit an Actuator, simply click the action Edit ⑤ of the context menu (see [Edit an Actuator](#), p. 76).

Android Test Nacho	Actuator_demo	Capacity is full	false	<input checked="" type="checkbox"/>

CONFIGURATION

This section allows the user to view, create, modify and delete the zones, cameras, schedules, sections and capacity counting areas. For some configuration examples for the most common scenarios see [Configuration Examples](#).

ZONES tab

In SYNC, a zone is a user-defined area that may include other zones and/or cameras. When a plate is sent to SYNC by an ANPR camera, that plate is assigned to the zone in which the camera has been configured.

SYNC will process each plate according to the zone's rules, checking if the vehicle is authorized, has generated an alarm, etc. It is possible for a zone to inherit the schedules of its parent zone.

For samples see [Configuration Examples](#).

Zones Table

The screenshot shows the 'ZONES' tab in a configuration interface. At the top, there are navigation tabs: ZONES, CAMERAS, SCHEDULE, SECTIONS, and CAPACITY. Below them is a search bar containing 'USER:rafa' and a 'Filter results' button, with a red circle '4' next to it. The main table has columns: Id, Name, Parent, Inherit Schedules?, Schedules, Users, and Town Code. A red circle '2' is next to the 'Town Code' column header. A context menu is open over the 'Cosco' row, showing options: Edit (5), Delete (6), Filter by - Users (7), and Close. At the bottom right, there are three icons: a plus sign (1), a refresh icon, and a trash can (3). The bottom status bar shows a gear icon, '27 items', a refresh icon, and the three action icons (1, 2, 3).

Id	Name	Parent	Inherit Schedules?	Schedules	Users	Town Code
51	Cosco		No		axis experience, cosco, eticoparking, minuteman, rafa	<input type="checkbox"/>
37	Sice				jgarcia, rafa, sice	<input type="checkbox"/>
41	Clovis				admin, anthonylee, lawson, rafa, testuser	<input type="checkbox"/>
116	Palos Garza				lawson, palos, rafa	<input type="checkbox"/>
18	Campus1				admin, axis experience, jgarcia, karen, lawson, minuteman, rafa, vaxtor-asia, veronica	<input type="checkbox"/>
119	Malaysia iSpeed PoC		No		malaysia-poc, rafa, vaxtor-asia	<input type="checkbox"/>
43	Clovis Police		No		clovis, jgarcia, rafa	<input type="checkbox"/>
33	Civica		No		alan, anthonymclellan, jgarcia, lawson, rafa	<input type="checkbox"/>
44	ART CA		No		rafa, shane	<input type="checkbox"/>

Filter Zones

SYNC includes a quick way to search a Zone by adding search criteria as a text string (see ④ of the [Zones Table, p. 82](#)). To enable this, a Filter to the Results can be added or removed, also you can use the Filter by option in the context menu (see ⑦ of the [Zones Table, p. 82](#)). Search filter syntax is: **Token:FilterValue**, where:

Token	filterKey	filterValue
ID	id	Zone ID
NAME	name	Zone name

NOTE! To clear the search criteria use button [X] located at right of the filter bar.

Create a Zone

To add a new Zone, press the button ① of the [Zones Table, p. 82](#). A pop-up window will appear in which you can define the following parameters.

The screenshot shows a 'Zones' configuration window with the following elements:

- 1** Name * (text input)
- 2** Use authorization rules (toggle switch)
- 3** Parent (dropdown menu, currently 'No parent')
- 4** Schedules (text input)
- 5** Town Code (text input)
- 6** Users (list of users: admin, q1700-le-uk-off, demo, q1700-le-ny, jigaracia, xtivity, jaime, dan)
- 7** Speed limit * (text input, value 0)
- 8** Prowling minutes * (text input, value 0)
- 9** Prowling times detected * (text input, value 0)
- 10** Alarm settings (grouped in a red box):
 - Speeding alarm (toggle switch)
 - Prowling alarm (toggle switch)
 - Kamikaze alarm (toggle switch)
 - ADR (Dangerous Goods) alarm (toggle switch)
- SAVE button (bottom right)

Description:

- **Name** ① : Name for the zone.
- Use Authorization rules ② :
- **Parent** ③ : Select the parent zone (if any). Once a parent zone is selected it can inherit any schedule set.
- **Schedules** ④ : Select the schedules that apply to this zone. If a zone has no schedules associated with it, then all the vehicles are authorized by default.
- **Town code** ⑤
- **Users** ⑥ : Select which users can see this zone and receive real time events generated by it. *
- **Speed limit** ⑦

- **Prowling minutes** ⑧
- **Prowling times detected** ⑨
- **Alarms** ⑩ **

(*) Users:

- Enable users to view cameras in a zone or receive alarms for that zone etc. by selecting the appropriate user from the users list and double clicking on the user to move it across to the right-hand box (assigned users).
- This user can now view any real-time information for that zone.
- The reason this is not set as a default is there may be a massive amount of information being received from many readers which would overload the system.

() Alarms:**

- **Speeding alarm:** If activated, an alarm will be generated if a vehicle goes over the preset speed limit.
- **Prowling alarm:** (Frequent Visitors) If activated, an alarm will be generated if the same vehicle is detected x times in that zone within y minutes/hours/days (where x & y are user defined).
- **Kamikaze alarm:** If activated, an alarm will be generated if a vehicle is travelling in the opposite direction to that specified. (see 9.2.1 Add a camera where you can enter the expected direction)
- **ADR (Dangerous Goods) alarm:** If activated, an alarm will be generated if the detected vehicle includes an ADR tag.

Edit a zone

To edit a Category, simply click to the action Edit ⑤ of the context menu of the [Zones Table](#), p. 82.

Delete a Zone

To delete a Zone, simply click to the action Delete ⑦ of the context menu of the [Zones Table](#), p. 82, or use the multiple Zone delete option:

Name	Parent	Inherit Schedules?	Schedules	Users	
UK Office		No	Office hours, 24 x 7	vaxtor-asia	<input type="checkbox"/>
Trigg Industries		No		rafa, sam7007	<input type="checkbox"/>
to_delete_3		No			<input checked="" type="checkbox"/>
to_delete_2		No			<input checked="" type="checkbox"/>
to_delete_1		No			<input checked="" type="checkbox"/>
Test-ALPR India		No		rafa, startologic, vaxtor-asia	<input type="checkbox"/>

← this Zone has a camera associated!

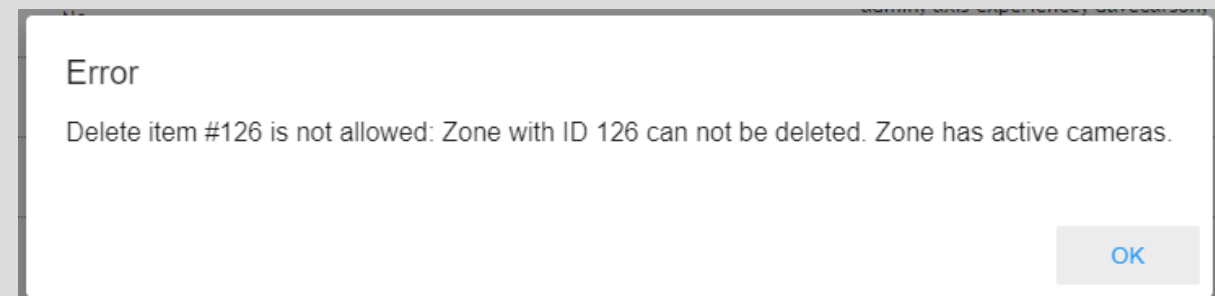

Once the checkbox or checkboxes are selected, press the delete button (see ③ of the [Zones Table](#), p. 82), and a confirmation window will appear asking you if you want to delete the list items:

If you are sure, press the [OK] button and the list will then be deleted, otherwise Cancel.

NOTE!

If a zone has a camera associated, an error message is displayed:

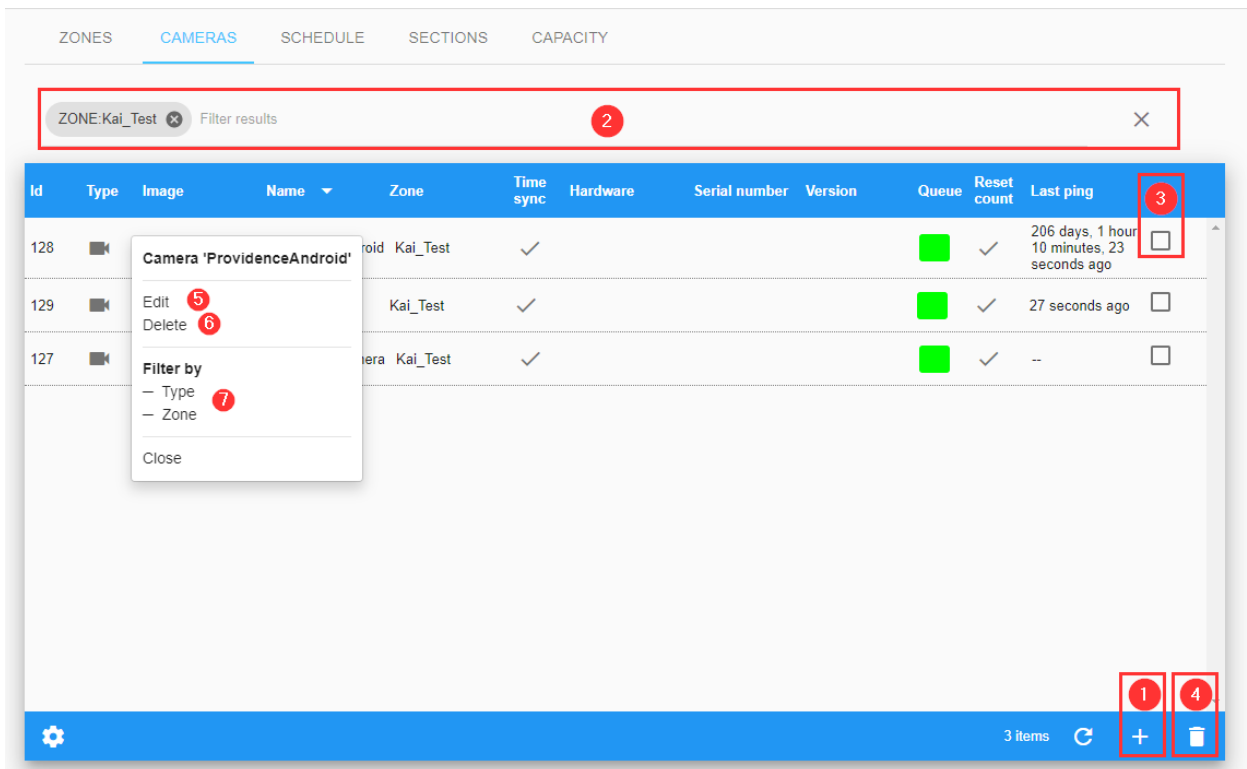

Finally, a Toast message is displayed (at bottom left corner of the window) showing the deleting confirmation. In this case, two Zones have been deleted:

CAMERAS Tab

This area shows all active cameras defined in MOBOTIX SYNC including environment (color contextual) cameras.

Cameras Table

Filter Cameras

SYNC includes a quick way to filter a Camera by adding search criteria as a text string (see ② of the [Cameras Table, p. 88](#)) or using the fast Filter by options in the context menu (see ⑦ of the [Cameras Table, p. 88](#)). To enable this, a Filter to the Results can be added or removed. Search filter syntax is: **Token:FilterValue**, where:

Token	filterKey	filterValue
ID	id	Camera ID
CAMERA NAME	name	Camera name
TYPE	type	Camera type
ZONE	zoneld	Zone ID or Zone name

NOTE!

1. To clear the search criteria use button [X] located at right of the filter bar.
2. The ZONE filter must include an exact value (ID or list name) because it is a relation, not a camera attribute.

Add a Camera

To add a new camera to the system, press the button ① of the [Cameras Table, p. 88](#).

SAVE

Description:

- Plate Reader Id ① This is a unique identifier defined by the plate reading software (VaxALPR On Camera, VaxALPR for PC, VaxALPR for Android etc.).
- Region of interest ID ②
- Name ③ User defined name to help identify the camera.
- Type ④ Camera type:
 - **Reader:** Select this option if the camera is an ANPR camera.
 - **Environment:** Select this option if the camera is linked to a plate reader but is not the camera capturing the plate. i.e. this is a (color) contextual camera. (Use the same Plate Reader Id as this is the associated color contextual camera for the IR camera setup in VaxALPR)
- Zone ⑤ Select the area in which you want to register the camera.

- Address ⑥ User defined address of the camera.
- Overlay ⑦ User defined text to appear as a watermark on the saved image (top left)
- Capturer ⑧ User defined name for this server. This field is used in the replication process (when servers are being linked).
- Grace hours ⑨ This is the time interval between camera health checks.
- Report type (10) Select when SYNC should store the result.
 - **Freeflow:** Store the plate only if it has been detected in freeflow mode.
 - **Signaled (Triggered):** Store the plate only if it has been detected due to an external trigger.
 - **Both:** Store the plate if either of the above occur (so always store the plate).
- Expected Vehicle Direction (11) Alarms can be generated if a plate is traveling the wrong way. VaxALPR attempts to determine the direction of each plate read and passes this onto SYNC. Values can be:
 - Getting closer. Plates are expected to approach the camera.
 - Getting farther. Plates are expected to be moving away from the camera.
Note that if the camera is positioned very low for example, i.e. below the height of a plate, then the direction can be misreported.

Synced Information Tab

Remote cameras can be monitored by MOBOTIX MOBOTIX SYNC and certain information can be synchronized between the camera and the SYNC.

Delete a Camera

To delete a Camera, simply click to the action Delete ⑥ of the context menu of the [Cameras Table](#), p. 88. Or use the multiple Cameras delete option.

SCHEDULE Tab

A schedule defines the authorized date ranges for each plate captured.

If the capture date of the plate is within a schedule, then the authorization rules defined for that schedule are applied.

Only three exceptions are applied:

- If a zone has no schedules linked to it, then all the vehicles are authorized.
- If a vehicle is on a whitelist linked to the zone, then that vehicle is always authorized in that zone.
- If a schedule is global, then all the vehicles detected in that schedule are authorized.

Schedule Table

Description	Active from	Active until	Global	Time frames	Regular expressions
Office hours	01/19/2020	01/21/2025	Global	Office	
Estado Alarma - 0 y 1		21/2021	Not global	Circulación 0 y 1	Plate number is odd
24 x 7		31/2021	Not global		

Edit or Create a new Schedule

Press the add (+) button ① at the bottom right of the [Edit or Create a new Schedule, p. 94](#). A pop-up window will appear in which you can define the following parameters.

- Description ① : User defined description for the schedule.
- Active from ② : Enter the date from which the schedule will be activated.
- Active until ③ : Enter the end date for the active schedule.
- Global ④ : Indicate whether the schedule is global or not.

NOTE! To edit a Schedule, click the action Edit ② in the context menu

Delete a Schedule

To delete a Schedule, click on the action Delete ⑤ in the context menu of the [Schedule Table, p. 94](#). Once pressed, a confirmation window will appear. A schedule cannot be deleted if it has been associated with a zone.

Linking Time Frames to a Schedule

Usually schedules need to be more flexible than just a start and end date. Different times frames can be defined and associated with a schedule.

Once you have created your schedule, click the action Timeframe ③ in the context menu of the [Schedule Table, p. 94](#) to access the Time frames window.

Here you can select the different preconfigured Time frames, or create a new one by pressing the add button (+) located at the bottom right of the window.

Time Frame Table

The screenshot shows the 'SCHEDULE' tab in a configuration interface. At the top, there are navigation tabs: ZONES, CAMERAS, SCHEDULE (active), SECTIONS, and CAPACITY. Below these is a header for 'Time frames of 'Office hours':'. On the right side of this header, there are two buttons: a refresh button (6) and a 'SAVE' button (5). The main area contains a table with the following columns: Description, Start, Stop, Days of week, and Months. The table lists four time frames: 'Office', 'First seven days of each month', 'Circulación 0 y 1', and 'Always'. A context menu is open over the 'Office' row, showing 'Edit' (2), 'Delete' (3), and 'Close' options. A red box (4) highlights the checkbox for the 'Office' row. At the bottom right of the table, there is a blue bar containing a settings gear icon, the text '4 items', a refresh icon, and an add (+) button (1).

Description	Start	Stop	Days of week	Months
<input checked="" type="checkbox"/> Office	07:00	18:59	-MTWTF-	JFMAMJJASOND
<input type="checkbox"/> First seven days of each month	00:00	23:59	SMTWTFS	JFMAMJJASOND
<input type="checkbox"/> Circulación 0 y 1	00:00	23:59	-MT---	JFMAMJJASOND
<input type="checkbox"/> Always	01:00:00	23:59	SMTWTFS	JFMAMJJASOND

Add or Modify Time Frames

Press the add (+) button ① at the bottom right of the [Add or Modify Time Frames, p. 96](#). A pop-up window will appear in which you can define the following parameters.

Time frames
✕

Description * 1

Ignore year: No 2

Start 3

Year * 4 ▼ Day ▼ Hour ▼ Minute ▼

Stop 4

Year * 4 ▼ Day ▼ Hour ▼ Minute ▼

Days of week 5

All

Months 6

All

SAVE

Description:

- Description ① : User defined description.
- Ignore year ② : Select this option if you want the timeframe to be valid for any year.
- Start ③ : Start values for the time frame.
- Stop ④ : Finish values for the time frame.
- Day of the week ⑤ : Days of the week when this timeframe will be active.
- Months ⑥ : Months when this timeframe will be active.

NOTE!

When you have finished setting the new Time frame press the "Save" button and you will return to the list.

Modifying preconfigured Time Frames is NOT recommended.

To modify a Time frame, click the action Edit ② in the context menu.

Assign a Time Frame

To assign the new timeframe to the schedule (see the [Time Frame Table, p. 96](#)): enable it ④ and press **Save** ⑤ . Otherwise, click ⑥ to return without changes.

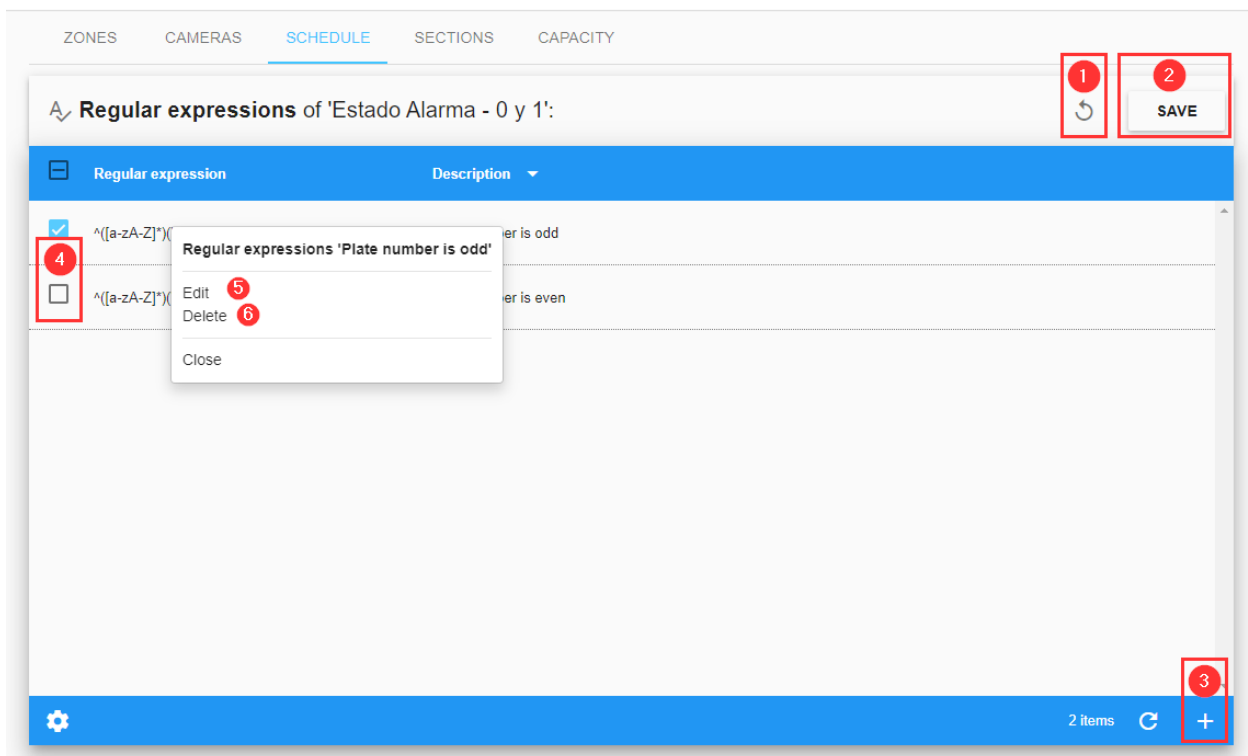

Delete a Time Frame

To delete a Time frame, click on the action Delete of the context menu. A confirmation window will appear to delete the selected entry. A Time frame cannot be deleted if it is associated with a Schedule.

Linking Regular Expressions to a Schedule

Once you have created your schedule, click the action Regular Expressions ③ in the context menu of the [Regular Expressions Table, p. 98](#) to access the Regular Expressions window.

Regular Expressions Table

Once inside this menu, you can select previously configured Regular expressions, or create a new one by pressing the add button (+) ③ at the bottom right of the [Regular Expressions Table, p. 98](#).

Add or Modify Regular Expressions

A Regular Expression is a mathematical formula or logic expression used for say selecting odd plates (sometimes used in city congestion schemes) or ones containing certain character combinations.

To edit fields:

- Description ① : User defined description.
- Regular Expression ② : Fill with an appropriate Regular Expression formula.

NOTE! To modify a Regular expression, click the action Edit ⑤ in the context menu

Assign a Regular Expression.

When you have finished setting the new 'Regular Expression', press the "Save" button ②, you will return to the list.

To assign the new 'Regular Expression' to the Schedule (see the [Regular Expressions Table, p. 98](#)) enable it ④ and press **Save** ②. Otherwise, click ① to return without changes.

Delete a Regular Expression

To delete a 'Regular Expression', click the action Delete ⑥ in the context menu of the [Regular Expressions Table, p. 98](#). Once pressed, a confirmation window will appear. A Regular expression cannot be deleted if it is associated with a Schedule.

SECTIONS Tab and Average Speed Alerts

Lengths of road between any two cameras may be defined as a section. This could be part of a road network, part of a large car park or even a long entrance lane into an industrial estate where speed is to be monitored.

Section Table

The screenshot displays the 'SECTIONS' tab in a configuration application. At the top, there are navigation tabs: ZONES, CAMERAS, SCHEDULE, SECTIONS (active), and CAPACITY. Below these is a search bar labeled 'Filter results' with a red circle '2' around it. The main area contains a table with the following data:

Id	Name	Distance (m)	Maximum (Sec)	Entrance camera	Exit camera	
5	Section Test	500	300	Vaxtor Test Entry	Vaxtor Test Exit	<input type="checkbox"/>
4	Indonesia - J		300	Indonesia - Camera 1 - Incoming	Indonesia - Camera 2 - Outgoing	<input type="checkbox"/>
7	HYT - Taiwan		60	HYT - Taiwan - Back Camera	HYT - Taiwan - Front Camera	<input type="checkbox"/>
6	HYT - Taiwan		60	HYT - Taiwan - Front Camera	HYT - Taiwan - Back Camera	<input type="checkbox"/>
1	HK Section C		400			<input type="checkbox"/>

A context menu is open over the first row, titled 'Section 'Section Test''. It contains the following options:

- Edit (5)
- Delete (6)
- Filter by (7)
 - Entrance camera
 - Exit camera
- Close

At the bottom right, there are icons for settings (1), refresh, add (+), and delete (trash) (4). The status bar shows '5 items'.

Filter Sections

SYNC includes a quick way to filter a Section by adding search criteria as a text string (see ② of the [Section Table, p. 100](#)). To enable this, a Filter to the Results can be added or removed. Search filter syntax is: **Token:FilterValue**, where:

Token	filterKey	filterValue
ID	id	Section ID
NAME	name	Section name

Token	filterKey	filterValue
ENTRANCE	entranceCameraId	Section entrance camera
EXIT	exitCameraId	Section exit camera

Add a Section

Press the add (+) button (see ① of the [Section Table, p. 100](#)) at the bottom right of the menu.

Section
×

Name * 1

Distance (m) * 2

Maximum (Sec) * 3

Entrance camera * 4 ▼

Exit camera * 5 ▼

SAVE

Description:

- Name ① : User defined name for the section of road.
- Distance ② : Distance between the entry camera and the exit camera of that section.
- Maximum ③ : Number of seconds to abort the calculation. If a vehicle takes longer than the specified number of seconds then the speed is not calculated. This can remove outliers.
- Entrance camera ④ : Entrance camera for the section.
- Exit Camera ⑤ : Exit camera for the section

NOTE!

- The length of the section (the distance between the two cameras) may be defined in meters and the maximum target time to complete the journey is in seconds. This can be considered as the average speed limit for the section. By setting these parameters then when a vehicle passes between the two defined cameras in less than the set time - an alert is generated and displayed on the user screen.
- The speed is stored against every vehicle passing the second camera and can be seen using the PLATES/SEARCH facility.
- Plates read by the first camera are shown with a speed of -1. Plates read can be searched by those generating alerts and these alerts can also be sent by email – see later in this guide.

Delete a Section

To delete a Section, click the action Delete ⑥ in the context menu of the [Section Table, p. 100](#). Once pressed, a confirmation window will appear. Also, you can use the multiple Sections delete option.

Name	Distance (m)	Maximum (Sec)	Entrance camera	Exit camera	
section_2	2	2	Axis Embarcado	Axis Finland - Timo1	<input checked="" type="checkbox"/>
section_1	12	12	9WNWExit	9WWSEntry	<input checked="" type="checkbox"/>
Section Test	500	300	Vaxtor Test Entry	Vaxtor Test Exit	<input type="checkbox"/>

CAPACITY Tab - Vehicle Count

SYNC can track the capacity (vehicle count) within a defined area.

Capacity Table

The screenshot shows the 'CAPACITY' tab in a configuration tool. At the top, there are navigation tabs: ZONES, CAMERAS, SCHEDULE, SECTIONS, and CAPACITY. Below the tabs is a search bar containing 'CAT:Not assigned' and a 'Filter results' button, with a red circle '2' next to it. The main area is a table with columns: Id, Count, Name, Entrance cameras, Exit Cameras, Category, Max capacity, Ignore car direction, Reset time, Crosstime, and Virtual?. A context menu is open over the first row, showing options like 'Capacity "Visitas Sur"', 'Edit' (5), and 'Delete' (6). A 'Filter by' menu is also visible with options for 'Entrance cameras' (7), 'Exit Cameras', and 'Category'. At the bottom right, there are icons for settings (1), refresh, add (+), and delete (4). The table contains 8 items.

Id	Count	Name	Entrance cameras	Exit Cameras	Category	Max capacity	Ignore car direction	Reset time	Crosstime	Virtual?
2	12/38	Visitas Sur	Lawson -	Q-1700-LE North Carolina	Not assigned	38	Ignore	02/04/2020, 12:00:00 AM		False
7	0/0	Ind JM		Vaxtor - Asia Camera 2	Not assigned	0	Ignore	12/03/2020, 06:00:00 PM		False
8	0/0	Ind Hig		Indonesia - Camera 2 - Outgoing	Not assigned	0	Ignore	12/14/2020, 05:00:00 PM		False
12	10/25	AX		SO Demo	Not assigned	25	Does not ignore	10/22/2021, 12:00:00 AM		False

14	0/10	Vaxtor Test	Vaxtor Test Entry	Vaxtor Test Exit	Not assigned	10	Does not ignore	03/25/2022, 12:00:00 AM		False
9	0/1000	Parking demo	Parking demo entrada	Parking demo salida	Not assigned	1000	Ignore	05/07/2021, 12:00:00 AM		False
4	0/1552	Campus1	CP 02 Entry	CP 01 Exit	Not assigned	1552	Ignore	03/31/2020, 06:00:00 AM		False

Filter Capacity

SYNC includes a quick way to filter Capacity by adding search criteria as a text string (see ② of the Capacity Table, p. 103) or using the fast Filter by options in the context menu (see ⑦ of the Capacity Table, p. 103). To enable this, a Filter to the Results can be added or removed. Search filter syntax is: **Token:FilterValue**, where:

Token	filterKey	filterValue
ID	id	Aforo ID
NAME	name	Aforo name
ENTRANCE	entranceCameraIds	Aforo entranceCameraIds
EXIT	exitCameraIds	Aforo exitCameraIds
CATEGORY	categoryId	Category ID or Category name

Create a Capacity (Count) Area

Press the add (+) button (see ② of the [Capacity Table](#), p. 103) at the bottom right of the menu.

A pop-up window will appear where you can define the area:

Capacity
×

Name * 1

Entrance cameras * 2

Description:

- Name ① : User defined name for the Capacity/Count area.
- Entrance camera ② : Entrance camera for the section.
- Exit Camera ③ : Exit camera for the section
- Max Capacity ④ : The maximum number of vehicles allowed in the Capacity/Count area.
- Reset time ⑤ : The time at which the count is automatically reset to zero. E.g. 23:00.
- Maximum time allowed ⑥ : by vehicle.

- Maximum search time ⑦ : by vehicle.
- Count ⑧ : Vehicles inside Capacity/Count area.
- Virtual? ⑨
- Flags ⑩
 - **Ignore Car direction:** The user can choose to ignore the direction of travel.
 - Fire an alarm if maximum time is exceeded.
 - Crosstime.
 - Reset capacity.
 - Deny if full.
 - Ignore if not authorized.
- Category ⑪

Delete a Capacity

To delete a Capacity, click the action Delete ⑥ in the context menu of the [Capacity Table, p. 103](#).

Once pressed, a confirmation window will appear.

Also, a multiple Capacity delete option is available.

Id	Count	Name	Entrance cameras	Exit Cameras	Category	Max capacity	Ignore car direction	Reset time	Crosstime	Virtual?
2	 12/38	Visitas Sur	Lawson - P1455-LE 29mm	Q-1700-LE North Carolina	Not assigned	38	Ignore	02/04/2020, 12:00:00 AM		False <input type="checkbox"/>
5	 0/5	ADR Capacity	CP 02 Entry	CP 01 Exit	ADR	5	Does not ignore	04/03/2020, 12:00:00 AM		False <input checked="" type="checkbox"/>
7	 0/0	Indonesia - JMTO PoC	Vaxtor - Asia Camera 1 -	Vaxtor - Asia Camera 2	Not assigned	0	Ignore	12/03/2020, 06:00:00 PM		False <input checked="" type="checkbox"/>

SETTINGS

The settings area is only available for administrators. In this section, it is possible to view and modify the main settings for the server.

Do not modify the values in this section if you have not read and fully understood this manual.

Click on the blue bars to show or hide the options.

- Time between alerts for the same vehicle (seconds): Set the minimum time between blacklist alerts for the same vehicle.
- **Send alerts by email:** Enable this option to send emails to specified users when an alert is triggered by the system.
- **Email sender address:** Insert the sender's email address for all the alerts.
This is how it should appear in the received email message – and needn't be the actual email address used (smtp) as set up below.

- **Email sender name:** Enter the name of the sender that will appear in the sent emails.
- **Blacklist alert email subject:** Set the email subject for blacklist alerts. It is possible to use special words that will be replaced by the real-time information in the email. The allowed values are described in the appendix of this document.
- **Blacklist alert email body:** Set the email body for blacklist alerts. It is possible to use special words that will be replaced by the real-time information in the email. The allowed values are described in the appendix of this document.
- **Speed alert email subject:** Set the email subject for overspeed alerts. It is possible to use special words that will be replaced by the real-time information in the email. The allowed values are described in the appendix of this document.
- **Speed alert email body:** Set the email body for overspeed alerts. It is possible to use special words that will be replaced by the real-time information in the email. The allowed values are described in the appendix of this document.
- **Prowling alert email subject:** Set the email subject for prowling alerts. It is possible to use special words that will be replaced by the real-time information in the email. The allowed values are described in the appendix of this document.
- **Prowling alert email body:** Set the email body for prowling alerts. It is possible to use special words that will be replaced by the real-time information in the email. The allowed values are described in the appendix of this document.
- **Kamikaze alert email subject:** Set the email subject for Kamikaze alerts. It is possible to use special words that will be replaced by real-time information in the email. The allowed values are described in the appendix of this document.
- **Kamikaze alert email body:** Set the email body for Kamikazee alerts. It is possible to use special words that will be replaced by real-time information in the email. The allowed values are described in the appendix of this document.
- **Time in zone alert email subject:** Set the email subject for time in zone alerts. It is possible to use special words that will be replaced by real-time information in the email. The allowed values are described in the appendix of this document.
- **Time in zone alert email body:** Set the email body for time in zone alerts. It is possible to use special words that will be replaced by real-time information in the email. The allowed values are described in the appendix of this document.
- **Time in zone plate distance:** This is the plate match accuracy (Levenshtein distance) of a plate entering and leaving a zone for them to be considered the same plate.
Example: if the reader at the entrance reports 1234ABC and the reader at the exit reports 1235ABC and the distance is 1, then system will mark 1234ABC as out.
- **Must send OCR image:** Enable this option to append the OCR image to the emails.

- **Must send environment images:** Enable this option to append the environment images to the emails.
- **Blacklist Levenshtein distance used:** This is the Blacklist Match Accuracy which is the number of characters that may differ between the plate read and the plate on the blacklist to trigger an alert.

Encrypt local lists

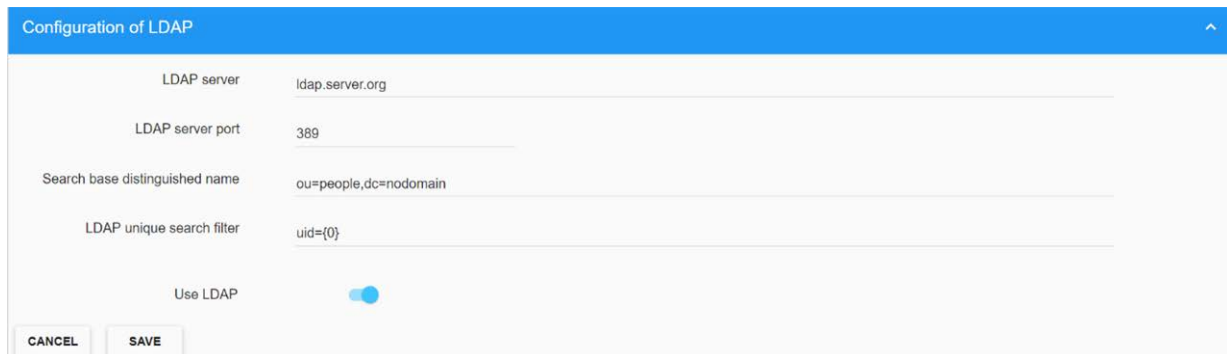

- **API Key:** Displays the master API Key assigned to the system.
- **Reset API key:** Enable this option to generate a new random API Key for the server.
- **Maximum login tries:** The maximum number of attempts to access SYNC before the account is locked. (incorrect login credentials)
- **Login disable time:** Set the number of minutes that an account is locked for after the maximum number of login tries has been exceeded.
- **Audit days stored:** Enter how many days the audit trail logs will be stored on the system.
- **Audit all users:** When enabled, all the actions of all the users are stored in the audit system. When disabled, only the actions of the users that have been selected for audit are stored.
- **Logout automatically after:** Set the number of minutes that a user can be idle before SYNC logs them out and they are requested to login again.
- **Encrypt local lists:** Select this option to encrypt all lists on the system using RSA 256 bit encryption. Note that the program currently uses a Postgres database which is already encrypted so this extra layer is not needed.
- **Password expiration:** Set the number of days before the user is requested to change their password.
- **Default time for quick add to list (hours):** There is a button to quickly authorize a plate on the system for an extra 2 hours. Set this value here - normally 24 hours.

Configuration of LDAP

SYNC can use a LDAP server (version 3) to authenticate users. When LDAP integration is active the user login is performed on the LDAP server.

If the authentication fails, the user will not be allowed to login to the system.

Only users with **Admin** rights will be logged in using the local credentials in cases where the LDAP authentication fails.

The screenshot shows a dialog box titled "Configuration of LDAP" with a blue header and a white body. It contains five input fields and a toggle switch. The fields are: "LDAP server" with the value "ldap.server.org", "LDAP server port" with the value "389", "Search base distinguished name" with the value "ou=people,dc=nodomain", and "LDAP unique search filter" with the value "uid={0}". The "Use LDAP" toggle switch is currently turned on. At the bottom left, there are two buttons: "CANCEL" and "SAVE".

- **LDAP server:** LDAP server domain name or IP address.
- **LDAP server port:** LDAP server port. 389 by default.
- **Search base distinguished name:** LDAP base search storage to be used when searching for users on the LDAP server.
- **LDAP unique search filter:** Filter used to find the desired user. This filter must find unique users based on the LDAP configuration.
- **Use LDAP:** Activate the LDAP integration

Filter Users

SYNC includes a quick way to filter the User list by adding filter criteria as a text string (see ④ of the [Users Table, p. 113](#)) or using the fast Filter by options in the context menu (see ⑦ of the [Users Table, p. 113](#)). To enable this, a Filter to the Results can be added or removed. Search filter syntax is: **Token:FilterValue**, where:

Token	filterKey	filterValue
ID	id	User ID
USER USERNAME	username	User username
FIRST FIRSTNAME	firstName	User firstname
LAST LASTNAME	lastName	User lastname
EMAIL	email	User email

Create a New User

Press the add (+) button (see ① of the [Users Table, p. 113](#)). A popup window will appear to create a new user.

The screenshot shows a 'Users' settings form with the following fields and controls:

- 1**: Username input field.
- 2**: 'Empty password' toggle switch.
- 3**: Password input field.
- 4**: 'Audited' toggle switch.
- 5**: 'Privileges' section containing:
 - 'Available' list: Actuators, Admin, AdminAuthorizations, AdminLists, Authorizations, Cameras, Lists, Maintenance.
 - 'Assigned' list: Basic.
- 6**: First name input field.
- 7**: Last name input field.
- 8**: Language dropdown menu (currently set to English).
- 9**: User ID input field.
- 10**: 'Pushbullet notifications' section containing:
 - Input field for 'Pushbullet Api Key'.
 - 'GET DEVICES' button.

A 'SAVE' button is located at the bottom right of the form.

Description:

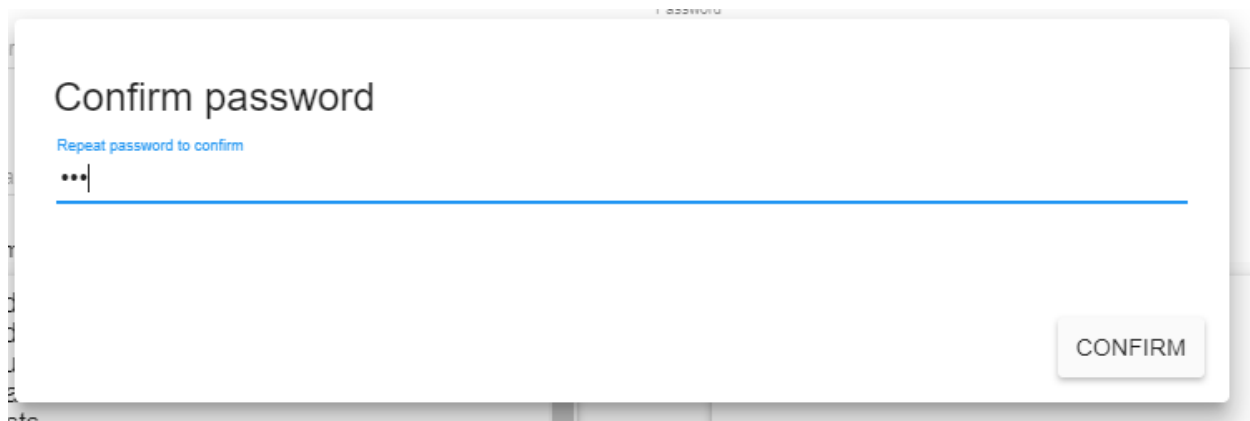

- Username ① : Username for the new user.
- Empty password ②
 - If enabled the user will not be able to login in the system and his password will be deleted. Apikey access will still work. This option has no effect if LDAP is enabled.
 - **Password:** Default password for the new user.
- Email ③ : Enter the user's email address. This email is used to receive system alerts and allows each user to receive their own email alerts.
- Audited ④ : Activate this option to add this user to the audit trail.

- Claims ⑤ : Set the privileges assigned to the user. Do this by double clicking on an item in the list to move it over to the user column (on the right)

Allowed privileges are:

- **Actuators:** The user can set up and configure actuators (relays).
 - **Admin:** Full privileges.
 - **Admin Lists:** The user can create, modify and delete any lists in the system.
 - **Authorizations:** The user can view, create, modify or delete authorizations.
 - **Basic:** The user can view data for zones, cameras, calendars, license plates and images. The user will only be able to see the information if it is also added for a user in the desired zone.
 - **Cameras:** The user can create and modify cameras.
 - **Lists:** The user can create, modify and delete only his own lists.
 - **Plates:** The user can modify plates read and protect images.
 - **Schedules:** The user can create, modify and delete schedules and time frames.
 - **Users:** The user can create, modify and delete users.
 - **Zones:** The user can create, delete and modify zones.
- First Name ⑥ : First name of the user.
 - Last Name ⑦ : Last name of the user.
 - Language ⑧ : User interface language.
 - User ID ⑨ : An optional ID normally used by the Police when plates are exported.
 - Pushbullet API Key ⑤ : Used with the Pushbullet software which is used for communicating with mobile devices. The system can be set up to send alarms to such a mobile device.

To create (or change) a new password, see below:

Confirm password

Repeat password to confirm

AUDIT Tab

All the actions performed on the system are stored by default in the audit trail log. You can monitor exactly what each user is using the system for.

Audit Table

The screenshot shows the 'AUDIT' tab in the settings interface. At the top, there are navigation tabs: SETTINGS, USERS, AUDIT (selected), and GDPR. Below the tabs is a search bar containing 'USER: admin_user' and a search icon. A table of audit records is displayed with columns: Id, Timestamp, Source address, Action, Failed, and User. A context menu is open over the first row, showing options like 'Show', 'Filter by' (with sub-options for Action, Failed, User, Source address, Date from, Date to), and 'Close'. At the bottom right, there is a status bar showing '66745 items' and a download icon.

Id	Timestamp	Source address	Action	Failed	User
51937293	06/17/2022, 01:22:25 PM	79.116.77.213	GET /api/audit	No	admin_user
51937280	06/17/2022, 01:22:25 PM	79.116.67.213	GET /api/user/all	No	admin_user
51937276	06/17/2022, 01:22:25 PM	79.116.65.213	GET /api/user/all	No	admin_user
51936947	06/17/2022, 01:22:25 PM	79.116.77.213	GET /api/audit	No	admin_user
51936917	06/17/2022, 01:22:25 PM	79.116.67.213	GET /api/user/all	No	admin_user
51936911	06/17/2022, 01:22:25 PM	79.116.65.213	GET /api/config/telegram	No	admin_user
51936908	06/17/2022, 01:22:25 PM	79.116.77.213	GET /api/config/dgl	Yes	admin_user
51936907	06/17/2022, 01:22:25 PM	79.116.77.213	GET /api/config/spf	Yes	admin_user
51936906	06/17/2022, 01:22:25 PM	79.116.67.213	GET /api/config/smtptest	No	admin_user
51936905	06/17/2022, 01:22:25 PM	79.116.65.213	GET /api/config/smtp	No	admin_user
51936902	06/17/2022, 01:22:25 PM	79.116.77.213	GET /api/config/alert	No	admin_user

Search Audit Records

In the upper left corner (see ① of the [Audit Table](#), p. 118). When clicked, a pop-up window appears where you can choose from the following search filters:

Search criteria
✕

Action 1	Details 2
Date from 3	Date to 4
Source address 5	User admin_user 6

Failed Yes No All 7

CLEAR

SEARCH

Description

- Action ① : SYNC action recorded.
- Details ② : Text details of the action are recorded.
- Date from ③ : Will show only the activity since the selected date + time.
- Date to ④ : Will show only the activity until the selected date + time.
- Source address ⑤ : IP address of the user that has performed a SYNC action.
- User ⑥ : User who has performed the SYNC action
- Failed ⑦ : Shows if the action failed or not.

Search Filters

SYNC includes a quick way to filter the Audit list by adding search criteria as a text string (see ④ of the [Audit Table, p. 118](#)) or using the fast Filter by options in the context menu (see ⑦ of the [Audit Table, p. 118](#)). To enable this, a Filter to the Results can be added or removed. Search filter syntax is: **Token:FilterValue**, where:

SETTINGS

Token	filterKey	filterValue
ACTION	action	Action Example: ACTION:GET/api/user/all
DETAILS	details	Text included in the Details attribute.
FROM DATEFROM	dateFrom	DateTime format dd/MM/yyyy hh:mm:ss , example: 08/01/2018 10:22:29
TO DATETO	dateTo	DateTime format dd/MM/yyyy hh:mm:ss , example: 08/01/2018 10:22:29
FAILED	failed	True or False
USER USERID	userId	User id or Username
SOURCE	sourceAddress	Source address

NOTE! To clear search criteria use button x located at the right of the Search Filter bar.

REST API

It is possible to communicate directly with MOBOTIX MOBOTIX SYNC via the REST API which facilitates functions such as pushing Blacklists or Whitelists directly into the Helix SQL databases (PUT) or receiving plate reads or images back (GET).

Definitions

API: Application Programming Interface.

This allows an external or remote piece of software to communicate directly with MOBOTIX SYNC.

REST - Representational State Transfer (sometimes written as ReST)

REST is an architectural style for providing standards between computer systems on the web., making it easier for systems to communicate with each other. REST-compliant systems, often called RESTful systems, are characterised by how they are stateless and separate the concerns of client and server.

So, a REST API defines a set of functions which developers can use to perform requests and receive responses via HTTP protocol such as GET and POST.

Because REST APIs use HTTP, they can be used by practically any programming language and are easy to test. It is a requirement of a REST API that the client and server are independent of each other allowing either to be coded in any language.

REST API

See separate manual: MOBOTIX MOBOTIX SYNC – API Definition – v1.7.1 or later.

The API documentation is available on the MOBOTIX Community website at <https://community.mobotix.com/t/mobotix-sync-server-api-definition/7244>.

APPENDIX

When configuring the alerts via email, there are several reserved words allowing you to customize the message:

\$timestamp\$	Sequence of characters denoting the time and date the reading event occurred, the format is "yyyy-MM-ddTHH:mm:sszzz"
\$platenumber\$	Returns the license plate number read.
\$cameraname\$	Indicates the name of the camera that made the recognition.
\$cameraid\$	Returns camera ID.
\$confidence\$	Provides the trust data of the read-in license plate.
\$charheight\$	Indicates the height of the character on the license plate.
\$latitude\$	Returns the latitude coordinates of the read plate.
\$longitude\$	Returns the longitude coordinates of the read plate.
\$speed\$	It returns the speed of the vehicle registered by the recognition system.
\$zone\$	Returns the area in which the plate was read.
\$zoneid\$	Return zone ID in which the plate was read.
\$description\$	Adds the alarm description in case of a blacklist trigger.
\$comments\$	Adds the comments of the alarm from a blacklist trigger.
\$hitcount\$	Shows the number of the hits for this plate on the blacklist.
